DECISION & ORDER

Introduction

The Patient Protection and Affordable Care Act of 2010 (ACA) requires that health insurance exchanges—marketplaces where individuals, families and small businesses can shop for qualified health insurance coverage—be established in each state by January 2014. In Act 48 of 2011, Vermont’s seminal health care reform law, the Vermont legislature created this state’s exchange, Vermont Health Connect (VHC).

The Green Mountain Care Board, also created by Act 48, is the independent board tasked with ensuring that changes in the health system improve the quality and accessibility of health care while stabilizing its costs. Among its regulatory tasks,¹ the Board reviews major medical health insurance rates. The Board first reviewed rates offered on VHC in 2013 when MVP Health Plan, Inc. (MVP) and Blue Cross and Blue Shield of Vermont (BCBSVT) each filed proposed rates to be effective in 2014; accordingly, this is the third year that the Board has reviewed health insurance rates offered through the exchange.

In this filing, MVP proposes a 3.0% average annual rate increase for health plans offered on VHC with coverage beginning January 1, 2016. Based on our review of the record and the testimony and evidence provided at hearing, we modify the rates as explained below, and then approve the filing.

Background

1. Starting in January 2014, the ACA requires that individuals and families have qualifying health insurance coverage or pay a penalty on their personal income tax returns. Qualifying coverage includes coverage from an employer, health insurance purchased through

¹ The Legislature assigned the Board three main responsibilities: regulation, innovation, and evaluation. In its regulatory role, the Board regulates health insurance rates, hospital budgets and major health care expenditures.

the exchange, or government-sponsored coverage that meets federally mandated minimum levels of coverage.

2. Vermont Health Connect offers qualified health plans (QHPs) to individuals, families and small employers with rates based on a single risk pool that includes the individual and small group markets. *See* 33 V.S.A. §§ 1803 (“Vermont Health Benefit Exchange”); 1811 (“Health benefit plans for individuals and small employers”). For plan years 2014 and 2015, a small employer was defined as employing up to 50 employees. Beginning in 2016, Section 1304(b) of the ACA expands the small employer definition to include employers with 51-100 employees. *See also* 33 V.S.A. §1811 (a)(3)(B) (defines small employer to include up to 100 employees as of January 1, 2016).²

3. Plans are offered to consumers in four “metal levels”: bronze, silver, gold and platinum. In addition to the metal level plans, catastrophic coverage is available primarily to persons under thirty years of age.³

4. In order to make health insurance plans offered on the exchange more affordable, individuals enrolling for coverage who do not have employer-sponsored insurance may be eligible for federal premium assistance depending on their household income. *See* 26 U.S.C. § 36B (“Refundable credit for coverage under a qualified health plan”). In addition, Vermont caps the percentage of household income that eligible individuals and families pay for health insurance premiums and offers subsidies for lower deductibles⁴ and copayments.⁵

5. The ACA requires that all exchange plans include ten categories of services, called “essential health benefits” (EHBs): (1) ambulatory patient services; (2) emergency services; (3) hospitalization; (4) maternity and newborn care; (5) mental health and substance use disorder services, including behavioral health treatment; (6) prescription drugs; (7) rehabilitative and

² Small employers with 51-100 employees may also choose to self-insure, particularly if their populations are young and healthy. *See* American Academy of Actuaries Issue Brief, *Potential Implications of the Small Group Definition Expanding to Employers with 51-100 Employees* (March 2015) at 5-6, available at http://www.actuary.org/files/Small_group_def_ib_030215.pdf

³ Catastrophic coverage is characterized by low premiums and high deductibles. Individuals enrolled in catastrophic plans do not qualify for income-based subsidies.

⁴ A deductible is the amount a patient pays for covered services before his or her health plan begins to pay.

⁵ A copayment is a fixed amount a patient pays for a covered health care service, usually at the time the service is delivered.

habilitative services and devices; (8) laboratory services; (9) preventive and wellness services and chronic disease management; and (10) pediatric services, including oral and vision care.

6. The ACA includes three risk spreading mechanisms intended to stabilize costs and provide incentives for insurers to participate in the exchanges. The transitional reinsurance program is funded through fees levied on health insurance plans and ends with the 2016 plan year. Under this temporary program, the federal government reimburses an insurer for a percentage of an individual's high cost claim that falls within specified parameters.

7. The risk corridors program, also ending in 2016, protects against pricing uncertainty by requiring insurers to calculate allowable costs and targets for each QHP based on a specific formula. If a plan earns a profit under the formula, the insurer must share it with the federal government; conversely, if a plan shows a loss, the federal government shares some of the loss.

8. The risk adjustment program applies to ACA-compliant plans in both the individual and small group markets. Under this program, plans with an enrolled population with lower than average actuarial risk will make payments to those plans that have an enrolled population with higher than average actuarial risks. The program is intended to protect against adverse selection among QHPs.

Procedural History

9. On May 15, 2015,⁶ MVP filed its 2016 Vermont Health Connect Rate Filing with the Board through the System for Electronic Rate and Form Filing (SERFF). The SERFF filing outlines the development of proposed exchange rates for coverage commencing January 1, 2016. *See Exhibit 1;*⁷ *available at*

http://ratereview.vermont.gov/sites/dfr/files/GMxCB_007_15rr_SERFF_7_8_15.pdf.

10. On May 27, 2015, the Office of Health Care Advocate (HCA), a division of Vermont Legal Aid that represents the interests of consumers of Vermont health care, entered a Notice of Appearance as an interested party to the proceeding. *See*

http://ratereview.vermont.gov/sites/dfr/files/GMxCB_007_15rr_HCA_NOA.pdf.

11. On July 6, 2015, the Vermont Department of Financial Regulation (Department) issued an opinion and analysis of the impact of MVP's rate filing on the company's solvency.

⁶ Prior to the date of filing, both Vermont insurance carriers stipulated to a May 15, 2015 filing date. MVP, however, submitted its rate filing through SERFF on May 14, 2015.

⁷ The exhibits referred to in this decision were either stipulated to by the parties or admitted into evidence upon motion at hearing.

Noting that MVP is one of two Vermont-licensed insurers domiciled in New York that are members of MVP Health Care, Inc. holding company system, the Department opined that the rates as proposed would not materially impact the solvency and surplus of MVP or of the holding company. Exhibit 8, *available at*

http://ratereview.vermont.gov/sites/dfr/files/GMCB_007_15rr_Solvency_Analysis.pdf.

12. Lewis & Ellis (L&E), the Board's contract actuary, conducted an actuarial review of the filing and on July 13, 2015 issued a memorandum summarizing its analysis and recommendations for modification. The memorandum was posted to the Board's rate review website on July 14, 2015. *See Exhibit 9; also available at*

http://ratereview.vermont.gov/sites/dfr/files/GMCB_007_15rr_Actuarial_Memorandum.pdf.

13. On July 19, 2015, the HCA filed with the Board the actuarial opinion of its contract actuary, Donna Novak. Exhibit 10, *available at*

http://ratereview.vermont.gov/sites/dfr/files/GMCB_007_15rr_HCA_ActuarialMemo_Redacted.pdf.

14. The Board held a public administrative hearing on July 28, 2015. Judith Henkin served as hearing officer by designation of Board chair Al Gobeille. Gary F. Karnedy, Esq. of Primmer Piper Eggleston & Cramer PC represented MVP. MVP Vice President and chief actuary Kathleen Fish testified for the carrier. Kaili Kuiper, Esq. appeared for the HCA and presented testimony of independent actuary Donna Novak, principal of NovaRest Actuarial Services. Ryan Chieffo, Assistant General Counsel for the Department, testified regarding the Department's solvency analysis and opinion. Mike Donofrio, General Counsel, represented the Board and conducted the examination of L&E actuary Jackie Lee, who testified about the firm's actuarial review and recommendations for modification.

15. The Board accepted public comments on the proposed rates from May 15, 2015 through July 29, 2015.⁸ The Board received 484 comments referencing both MVP's and BCBSVT's filings; 450 of those comments were based on a template provided to consumers by the Vermont Public Interest Research Group (VPIRG). Of the remaining 34, six written comments specifically address MVP's proposed rate increase, and two comments addressing MVP's proposed increase were verbally submitted to the Board during the rate hearing. The

⁸ Although the deadline for accepting comment expired on July 29, 2015, additional comments were received and reviewed by the Board subsequent to that date.

comments overwhelmingly address the issue of affordability for Vermonters and oppose any increase in premium rates. *See Public Comments, available at* http://ratereview.vermont.gov/sites/dfr/files/VPIRG_Rate_Comments_2015.pdf; http://ratereview.vermont.gov/sites/dfr/files/Public_Comment_2016_Exchange_Final.pdf.

Findings of Fact

Nature of the Filing

1. MVP is a non-profit health insurer domiciled in New York and licensed as a health maintenance organization (HMO) in New York and Vermont. MVP is a subsidiary of MVP Health Care, Inc., a New York corporation that transacts health insurance business through a variety of for-profit and not-for-profit subsidiaries. MVP offers HMO products to individuals and employers in the small and large group markets in Vermont.

2. There are 3,324 policyholders, 4,227 subscribers and 6,417 covered lives affected by this filing. Exhibit 1 (SERFF filing) at 9. MVP estimates its enrollment and market share will increase for 2016 because of the expansion of the small employer market, the movement of members into ACA-compliant plans, and the competitive pricing of its exchange products.

3. Enrollment for 2016 exchange plans begins in November 2015 for coverage beginning on January 1, 2016.

Summary of the Data, Analysis, and Testimony Presented at Hearing

4. To form a credible experience base for projecting its 2016 VHC rates, MVP used 2014 combined experience claim data from its non-ACA compliant and ACA-compliant individual and small group books of business, and groups with 51-100 members. MVP adjusted these claims to reflect the impact of cost sharing reductions, incurred but not reported paid claims (IBNR) and pharmacy rebates, and replaced high cost claims with a pooling charge. Exhibit 1 at 10.

5. Because a large portion of its members did not enroll in ACA-compliant plans until April 2014, MVP adjusted the experience period claims for the impact of membership not representing a full 12-month contract. Adjustments were also made for benefits added to and removed from coverage. MVP then applied a 2.0% morbidity improvement factor and adjusted

for Vermont's prescription drug out-of-pocket (OOP) maximum⁹ and the 2016 leap year. *Id.* at 11-13.

6. MVP projected the experience period claims forward to the rating period using an average annual allowed medical trend factor¹⁰ of 3.9%, or 4.4% paid trend,¹¹ and annual allowed pharmacy trend of 10.6%, or paid trend of 12.6%. *Id.* at 13-14.

7. MVP estimated its transitional reinsurance recovery for individual members in 2016 at 4.2% by calculating 50% of the annual average value of claims between \$90,000 and \$250,000 for members in the single risk pool between 2012 and 2014. *Id.* at 15.

8. Once MVP determined the projected paid index rate—the starting net claim cost used to set premium rates—it made plan-specific adjustments to account for benefits in excess of EHB and the per member per month (PMPM) and percent-of-premium expense loads, and to determine the actuarial value (AV) of each plan and its metal level. *Id.* at 16-17.

9. MVP added to the index rate non-claim expense adjustments that do not vary by plan, including an administrative expense load of \$36.60 PMPM. Plan-specific gross claim cost PMPM is then converted to per contract premium rates using a single conversion factor. Unlike previous years, MVP has not included any profit margin in this filing. *Id.* at 17-19.

10. L&E reviewed the filing and recommends four modifications. L&E first recommends that MVP base its demographic adjustment factor on its March 2015 enrollment data, rather than on its actual 2014 enrollment data. If this modification is made, MVP must also make a corresponding adjustment to its single conversion factor. These two modifications, taken together, produce a 0.3% increase in the rate. Exhibit 9 at 7, 9.

11. L&E also recommends that the carrier adjust for Blueprint¹² payment changes, which reduces rates by \$1.35 PMPM (a -0.4% decrease), and that it correct an error in the average policy duration factor for groups of 51-100, which reduces rates an additional \$0.38 PMPM. *Id.* at 7, 10.

⁹ Section 4089i(c) of Title 8 limits the amount an insured will pay out-of-pocket for prescription drugs, including specialty drugs.

¹⁰ In basic terms, trend refers to the change in the cost of health care and consists of utilization (frequency of use of the product or service) and unit cost.

¹¹ Allowed cost trends are based on charges that reflect the total amount of claims paid by both the carrier and the policyholder. Paid trends reflect the actual claim payment made by the carrier only.

¹² Pursuant to Vermont law, insurers are required to participate in the Blueprint for Health, Vermont's initiative to improve population health and control costs by promoting prevention and care coordination. 18 V.S.A. § 706 ("Health insurer participation"); § 703 ("Health prevention; chronic care management").

12. For this filing, L&E does not recommend—as it has in past years—that MVP develop its pharmacy trend assumptions using historical pharmacy claim experience, rather than solely on unadjusted national trends provided by its pharmacy benefit manager (PBM). Although it does not agree with MVP’s methodology, the pharmacy trend used by MVP is lower than L&E’s trend calculation, and therefore results in lower rates. *Id.* at 6.

13. L&E also notes that MVP made no upward adjustment to its rates to account for an approximate \$2.7M payment it will make to BCBSVT under the Centers for Medicare and Medicaid Services’ (CMS) risk adjustment program.¹³ *Id.* at 8.

14. After the recommended modifications, L&E calculates that the overall rate change will decrease from 3.0% to 2.7%. *Id.* at 10.

15. Donna Novak, the HCA’s independent actuary, maintains that MVP made two errors in its filing. First, Novak believes that the carrier failed to follow instructions for completing the Uniform Rate Review Template (URRT), and as a result, may have “overstated its paid to allowed ratio, which may impact its rates.” In her actuarial report, Novak opined that the rates could be overstated by 3.8%. Exhibit 10 at 7-9.

16. At hearing, however, Novak testified that she does not believe the rates may be overstated by 3.8%. TR at 100-108. Novak explained: “Because I really didn’t think the rates had been developed inappropriately, I didn’t feel comfortable asking for an adjustment in the rates ... I didn’t feel that the rates were incorrect.” *Id.* at 102.

17. Notwithstanding Novak’s statements at hearing and L&E’s opinion that the URRT is accurate, *see* TR at 74-75, the HCA requests that the carrier be required to provide additional documentation to justify its rate, asserting that a “discrepancy in MVP’s federal spreadsheet and its lack of compliance with federal rules are a warning that there is a mistake somewhere in the filing.” HCA Post-Hearing Memorandum (HCA Memo) at 5, 9, *available at* http://ratereview.vermont.gov/sites/dfr/files/GMCB_007_15rr_HCA_Post_Hearing_Memom.pdf.

18. In addition, the HCA recommends that the carrier be required to base its demographic adjustment on first quarter 2015 enrollment data, instead of 2014 enrollment data, and correspondingly adjust its single conversion factor. Although the HCA suggests the use of

¹³ The amount of the risk adjustment payment was not known by MVP as of filing date; CMS issued a report that disclosed the payment amount on June 30, 2015.

slightly different enrollment data than used by L&E, the effect on the rate is the same. *Id.* at 9-10.

19. At hearing, MVP witness Kathleen Fish testified that she disagrees with the use of an enrollment “snapshot” to calculate the demographic adjustment, but that both MVP’s methodology and that used by L&E are actuarially reasonable. TR at 21-28. Similarly, L&E’s actuary, while providing credible support for its own calculation, also concluded that both methodologies are reasonable. *Id.* at 70, 75. Fish requested that the Board reject a 0.3% increase for demographics as recommended by L&E because “MVP is very concerned about premium rates and affordability and wants to be a player in Vermont,” and does not consider a 0.3% modification material or a threat to its solvency. Consequently, MVP requested that the Board approve a 2.4% rate increase—the 2.7% recommended by L&E, minus the 0.3% demographic adjustment— which “represents MVP’s best estimate of the required premiums based on the actuarial assumptions,” to produce a “break even premium rate.” TR at 28-34.

20. Ryan Chieffo, witness for the Department, testified that if the Board were to reduce the rate increase to 2.4%, the Department’s opinion that the insurer’s solvency will not be impacted remains the same. *Id.* at 56 (“[A]n average 2.4 percent increase to MVP’s rates should operate to maintain its current level of solvency.”).

21. Two days after the hearing, MVP advised the Board that it made an error in its calculations, and that “[d]ue to an unfortunate oversight,” the 2.4% proposed rate increase should have been a 2.6% increase. *See*

http://ratereview.vermont.gov/sites/dfr/files/GMCB_007_15rr_7_30_15_Letter_to_Judith_Henkin.PDF. MVP elaborated on its mathematical error in its post-hearing memorandum and now

requests that the Board approve a 2.6% increase. MVP’s Post-Hearing Memorandum (MVP Memo) at 3, *available at*

http://ratereview.vermont.gov/sites/dfr/files/GMCB_007_15rr_Post_Hearing_Memo.PDF.

Standard of Review

1. Vermont law provides that the Board shall review health insurance rate filings to ensure that rates are affordable, that they are not “excessive, inadequate or unfairly discriminatory,” that they promote quality care and access to health care, protect insurer solvency, and are not unjust, unfair, inequitable, misleading or contrary to Vermont law. 8 V.S.A. §§ 4512(b); 4062(a)(2), (3); GMCB Rule 2.000, *Rate Review*, §§ 2.301(b), 2.401. In

addition, the Board takes into consideration changes in health care delivery, changes in payment methods and amounts, and other issues at its discretion. 18 V.S.A. § 9375(b)(6).

2. As part of its review, the Board will consider the Department's analysis and opinion on the impact of the proposed rate on the insurer's solvency and reserves. 8 V.S.A. § 4062(a)(2), (3). The Board shall also consider any public comments received on a rate filing. Rule 2.000, § 2.201.

3. The burden falls on the insurer proposing a rate change to justify the requested rate. *Id.* § 2.104(c).

Conclusions of Law

I. **MVP Must Adjust its Rates to Account for Blueprint Payments and to Correct its Policy Duration Factor.**

L&E determined that MVP should adjust its proposed rates for Blueprint payments and to correct its policy duration factor. Both MVP and the HCA agree to the adjustments. The Blueprint adjustment reduces rates by \$1.35 PMPM (-0.4%); the adjustment to the average policy duration factor reduces rates by \$0.38 PMPM (-0.1%).

II. **MVP's Use of 2014 Data to Determine the Demographic Adjustment and Single Conversion Factor Produces More Affordable Rates for Vermonters.**

Because MVP's 2015 actual enrollment is the basis for its projected 2016 enrollment, L&E recommends that the carrier recalculate the demographic adjustment to the index rate and the single conversion factor utilizing enrollment data from March 2015, rather than from 2014. Finding of Fact (Finding) ¶ 10. The HCA similarly requests that the carrier use more recent, albeit slightly expanded enrollment data, which yields the same result.

In response, MVP counters that its actual 2014 enrollment data produces a more accurate demographic adjustment and single conversion factor than does the use of enrollment from a single point in time. MVP Memo at 4. At hearing, however, both MVP and L&E agreed that both methods of calculation are actuarially reasonable. Finding ¶ 19. In support of not adopting L&E's recommendation that would result in a 0.3% rate increase, MVP presented testimony that a 0.3% rate difference is not material, will not impact the company's solvency, and will help MVP remain competitive in the Vermont market while making premiums more affordable to

Vermont consumers. MVP consequently requested that the Board approve 2.4% overall rate increase, rather than the 2.7% increase recommended by L&E. *Id.*

Notwithstanding that last year we concurred with our actuaries' view that the most recent enrollment data best reflects the population for the coming plan year, we decline to impose the recommended modification in this particular filing. *See* GMCB 017-14rr, *In re MVP Health Plan, Inc. 2015 Vermont Health Connect Rate Filing* at 10-12, available at http://ratereview.vermont.gov/sites/dfr/files/GMCB_017_14_rr_Decision.pdf. Unlike last year, calculating the demographic adjustment and single conversion factor using the more recent enrollment data results in an increase, rather than a decrease in rates. In addition, both MVP and L&E agree that the other's methodology is actuarially reasonable; MVP and the Department agree that a 0.3% decrease in rates will not affect the insurers' solvency. Accordingly, we conclude that our statutory obligation to ensure that health care is affordable for Vermonters tips the balance in favor of declining L&E's recommendation that we modify the demographic adjustment and single conversion factor.

III. The HCA Has Not Shown that MVP Made a Reporting Error on its URRT or That its Rate is Not Properly Calculated.

According to the HCA, MVP has failed to adequately document its rate calculation for federal reporting purposes and a discrepancy on the URRT signals the possibility of an error in the rate. HCA Memo at 5. We find no support in the record for the HCA's claims.

First, our actuaries have thoroughly reviewed the filing and find no error in the URRT. Finding ¶ 17. Even the HCA's independent actuary was equivocal regarding this issue, testifying at hearing that MVP's inclusion of certain data elements in the document "seemed inappropriate." TR at 101.

Second, and determinative of this issue, even if we were to accept that MVP failed to adequately document its rate development for federal reporting purposes, none of the actuarial witnesses at hearing—including the HCA's witness—testified that such an error would have impacted the rate development or resulting rates. To the contrary, the HCA's witness expressly withdrew her written opinion that rates might have been overstated by 3.8% due to a reporting error, and testified that she "didn't think the rates had been developed inappropriately . . . [and] didn't feel that the rates were incorrect." Findings ¶¶ 15, 16.

In light of our statutory directive to issue “a decision approving, modifying or disapproving the proposed *rate*,” 8 V.S.A. § 4062(a) (emphasis provided), and the absence of evidence that MVP’s rate development or resulting rate proposal are incorrect, we decline to require MVP to provide additional rate documentation as a condition of our decision and order.

IV. The Testimony and Evidence Presented at Hearing Support a 2.4% Rate Increase.

Last, we consider MVP’s post-hearing request that it be allowed to correct a mathematical error and revise its rate request from 2.4%, as discussed at hearing, to 2.6%. For the reasons outlined below, we approve a 2.4% rate increase, as presented by MVP at hearing.

This Board, pursuant to statute and by rule, adheres to a strict culture of transparency and holds rate review hearings that are open to the public and allow Vermonters to both listen to, and participate in, our decision-making process. While we commend MVP’s effort to provide its membership with a “break even” premium—MVP expects to collect from its members enough in premium dollars to pay their claims and cover the company’s costs, without achieving a profit—in making our decision here, we must consider MVP’s consistent position, voiced at a public hearing, that it does not consider a 0.3% difference in rates material, and that a downward modification in that amount poses no threat to MVP’s solvency.

Accordingly, we deny MVP’s post-hearing request to correct a mathematical error and conclude that MVP must reduce its post-hearing calculation of a 2.6% rate increase by 0.2%. The resulting 2.4% rate increase is consistent with MVP’s hearing testimony and evidence, does not pose a threat to MVP’s solvency, and produces more affordable rates for Vermonters.

Conclusion

The Legislature has charged this Board with ensuring that all Vermonters gain access to affordable, quality health care. Exerting downward pressure on health insurance rates is one of the ways that we continue to move closer to achieving that goal. As a result of our decision today, MVP’s average annual 2016 Vermont Health Connect rate increase is reduced from 3.0% to 2.4%.

Order

Based on the reasons discussed above, the Board modifies MVP’s 2016 Vermont Health Connect Rate Filing, and then approves the filing. Specifically, we order that MVP make an adjustment for Blueprint payments, correct an error in the average policy duration factor, and

thereafter reduce the resulting rate by an additional 0.2%. As modified, the average annual rate increase is reduced from the proposed 3.0% to 2.4%.

So ordered.

Dated: August 13, 2015 at Montpelier, Vermont.

Re: MVP Health Plan, Inc.
2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Mr. Lombardo:

The following additional information is required for this filing.

1. Objection Letter #3, question 4 asked if you expect to make any adjustments to the filing that will affect rates as a result of the 2015 legislative session. You responded that you do not expect to make any changes. At the July 18, 2015 Green Mountain Care Board meeting, Craig Jones, Director of the Vermont Blueprint for Health, presented on recent payment changes to the Blueprint program. As a part of this presentation, he demonstrated that MVP will save \$741,460.26 next year due to recent Community Health Team (CHT) payment market share adjustments. Do you agree with this figure? If not, what is the correct total savings? What is the per member per month savings for your Exchange products? Is this savings incorporated into your Exchange product filing? If not, why not? If you do not plan to incorporate this cost savings because you believe it is offset by other cost increases that were not incorporated into your filing, please specify the source and amount of the cost increase.

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than July 8, 2015.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

A handwritten signature in cursive script that reads "Jacqueline B. Lee".

2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Mr. Lombardo:

The following additional information is required for this filing.

1. Please provide the estimated impact on the 2014 CTR due to the report that CCIIO released with the actual reinsurance recoveries and risk adjustments for 2014.
2. Please discuss what impact the risk adjustment transfer should have on the 2016 premiums. Provide proposed changes, if any, to the 2016 premiums with updated exhibits.

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than July 6, 2015.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Re: MVP Health Plan, Inc.
2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Mr. Lombardo:

The following additional information is required for this filing.

1. In your response to Objection Letter #3, dated June 22, 2015, your first answer stated that "The benefit AVs on Worksheet 2 represent the relative value of each benefit plan compared [to] each other and it is not necessary for these AVs to represent the actual paid to allowed ratio of each plan or block as a whole." Your response did not address the AVs the HCA referred to in Objection Letter #3. In your June 18, 2015 answer to Objection Letter #2, question #9, you provided the weighted average Actuarial Value that you are using in pricing your plans and it equates to 0.701. We would expect that the "Paid to Allowed Average Factor in Projection Period" factor in Worksheet 1 of the URRT of 0.81 to be closer to the 0.701 average in your answer to objection #9. Please provide a quantitative justification for this difference.
2. Please provide the age distribution for the 2015 members enrolled in the catastrophic plan.
3. In response to Objection Letter #4, you provided enrollment and age factors for CY 2014 and Jan-Mar 2015. Did the 2015 data include membership for the non-ACA compliant populations identified in Exhibit 3 of the rate filing? If not please provide the enrollment distribution for each population shown in Exhibit 3. If so, please

provide the member months for each population in Exhibit 3 for the first quarter of 2015.

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than July 1, 2015.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

 2016 Vermont Exchange Rate Filing
 SERFF Tracking #: MVPH-130053210

Dear Mr. Lombardo:

On behalf of the Office of Health Care Advocate, the following additional information is required for this filing:

1. The weighted average actuarial value using the projected member months in Worksheet 2 of the URRT is .70 compared to the Paid to allowed factor in Worksheet 1 of the URRT, which is .81. Please provide a quantitative demonstration to justify this significant difference.
2. To the extent that you have not answered this question in your responses to previous interrogatories in this matter, please explain why most of the utilization factors in Exhibit 6 are larger than the HHS prescribed factors that you referenced on Page 10 of your Actuarial Memorandum.
3. What adjustment, if any, did you make for the relative morbidity of the groups with 51-100 employees currently insured by Cigna that will purchase coverage in the exchange?
4. Please indicate whether as a result of legislative changes in Vermont during the 2015 session you expect to make any adjustments to the above captioned filing that will affect rates and that are not already incorporated into the filing. Provide details including the rate impact for each adjustment.

5. Please explain any measures MVP Health Plan has taken to control administrative costs in the past five years including measures taken in relation to staff compensation. For any measures taken related to staff compensation, please include details

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than June 24, 2015.

Re: MVP Health Plan, Inc.
2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Mr. Lombardo:

The following additional information is required for this filing.

1. Please show quantitative development of how "adjustment for average policy during beginning/end of policy year" in Exhibit 3 were developed. Please use "ACA Compliant Individual" and "Non-ACA Compliant Individual Indemnity" as illustrative examples.
2. We note that the IBNR factor of 1.071 for Non-ACA Compliant Individual Indemnity products is higher than what we typically observe. Please provide narrative and quantitative support for the assumed IBNR factor.
3. Provide data sources that were considered in continued use of a 2% morbidity improvement factor used in projection of non-ACA compliant experience period data and explain why this assumption is reasonable and appropriate.
4. Please give quantitative and narrative support on why you assess that 61.8% of the Non-ACA compliant small group plan members will purchase individual coverage. What was the individual enrollment reflected in the 2015 ACA compliant products versus the 2014 individual enrollment?
5. Please update Exhibit 2b to show the following additional line items by drug category:
 - Experience Period Allowed Cost per Script

- Experience period deductible per script
 - Experience Period Copay per script
 - Experience Period Paid Cost per Script
 - Projected Allowed Cost per Script as of Q1 2016
 - Projected Deductible per Script
 - Projected Copay per Script
 - Projected Coinsurance per Script
6. In illustrating the drivers of rate change, provide quantitative derivation for the base period experience in line 32 and reinsurance recoveries illustrated in line 38 of the actuarial dataset.
 7. What was the methodology used in deriving the induced utilization factors illustrated in Exhibit 6? Explain differences in the development of induced utilization factors in the 2015 filing versus the 2016 filing.
 8. We note that the benefit relativity reflected in index rate (0.701) as illustrated in row 8 of Exhibit 6 is unchanged from the 2015 rate filing. Why is the average inforce benefit actuarial value unchanged?
 9. Please provide quantitative support for the derivation of induced demand reflected in index rate (1.047 induced utilization corresponding to 0.701 benefit relativity) as illustrated in row 9 of Exhibit 6. In doing so, explain why it is higher than the induced utilization factor of 1.044 for a higher actuarial value of 0.73.
 10. Reconcile the 2014 incurred claim PMPM of \$339.44 in the actuarial memo data set and the claim experience provided in Quantitative Response to Objection #1 - SERFF.pdf.
 11. For catastrophic plans, the induced utilization factor driven by age and gender adjustments is 0.636 in 2016 filing versus 0.533 assumed in the 2015 filing. Demonstrate how the primary driver contributing to the 27.3% rate change is due to differences in assumed age/gender distribution in 2015 versus 2016 filing.
 12. For the new gold plan that was added (Plan ID: 77566VT0040023), how was the membership distribution mapped?
 13. How does the assumed 4.2% in reinsurance recovery reconcile against the historical claim distribution in rows 233 thru 237 of the actuarial memo dataset?

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than June 18, 2015.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

Rita Tansen, ASA, MAAA

Re: MVP Health Plan, Inc.
2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Mr. Lombardo:

The following additional information is required for this filing.

1. For the ACA compliant plans, please provide individual 36 month history of medical claims and Rx claims split by drug category in a format similar to "Rolling 12 Medical and Rx Data.xls" provided in earlier filings and clearly illustrate normalized historic medical and Rx trends.
2. Please provide quantitative support for the development of entries listed under "Benefits Added" and "Benefits Removed" in the table illustrated in page 5 of the Actuarial Memorandum. Where a mapping exists between these entries and Milliman's EHB support document dated March 18, 2013, please illustrate this mapping.
3. How was the expansion of small group from 50 to 100 employees taken into account in rate setting for 2016? In doing so, please illustrate how Worksheet 1 of URRT reflects this expansion?
4. Justify why you expect the population morbidity in 2016 to be unchanged from 2014?
5. Provide quantitative support for the development of "Other" factors in Worksheet 1 of the URRT.
6. Provide quantitative support for the development of "Cost" and "Util" factors in Worksheet 1 of the URRT. In doing so, describe the methodology used in developing

the cost and utilization factors, including all adjustments made to the data (normalization for age, benefit changes etc.).

7. Have any changes in costs related to demographics of the projected covered population versus the experience period been accounted for? Please justify your answer. Please provide the average age of the experience period enrollment and the projected covered population.
8. What is MVP's credibility formula resulting in 33.62% credibility to the experience period?
9. Describe the source and appropriateness of data used in developing the credibility manual rates. In your response, please include all adjustments made to the source data to reflect the population, region, provider network, and benefits anticipated in the projection period.
10. Provide support for the new \$1.50 PMPM administrative load to account for an expanded network to members purchasing exchange products in VT through a partnership with PHCS.
11. Reconcile the -\$9.20 PMPM in reinsurance recovery stated in page 9 of the memorandum with the -\$6.95 PMPM in the URRT and the -\$11.29 in the Actuarial Data Set?
12. Was any independent study through 3rd party consultants conducted to analyze MVP's risk scores versus the average small group market?
13. Please confirm that the \$0.15 Exchange User Fee PMPM is accurate in the Actuarial Data Set. Explain why this is a positive adjustment in the Data Set and a negative adjustment in the URRT.
14. Exhibit 4 illustrates the calculation of single conversion factor using experience period membership. Please provide an equivalent exhibit using the membership distribution from March 2015.
15. Please supplement the narrative description of "Adjustment for average policy duration reflected in experience period" with quantitative support that illustrates the development of lines 14 and 15 in Exhibit 3.
16. Based on Exhibit 3, it appears that members from all other non-ACA compliant products (such as Agri Services, Individual Indemnity, etc.) will buy MVP's exchange products in 2016. Justify why you expect membership from your other products to completely migrate to MVP's 2016 exchange products as opposed to the competitor?
17. Provide support for why you expect 61.8% of Non-ACA compliant small group to enroll in the 2016 individual market?
18. Please provide a reconciliation between the expenses from the Actuarial Dataset (\$35.10), URRT (\$49.28), and Exh 5.

19. In the Actuarial Memorandum, it states that the admin load built into the 2016 rates is lower than the current cost structure; however, the administrative expense in the URRT is \$49.28 vs. the SHCE figures seen on pg. 11 of the Actuarial Memorandum. Please provide an explanation.

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than June 2, 2015.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

Jacqueline B. Lee F.S.A., M.A.A.A.

Request For Confidentiality - Objection Letter Response #2

Comments:

We make a request for confidentiality pursuant to 1 V.S.A. § 317 (c)(9), and ask that the designated information remain confidential and not subject to disclosure under Vermont's public records law. The disclosure of this information, which is derived from MVP's proprietary benefit relativity model would put our organization at a competitive disadvantage. The public disclosure of this information will potentially result in increased premiums for Vermonters.

Sincerely,
Matt Lombardo

ACTUARIAL MEMORANDUM

2016 Vermont Exchange Filing

Purpose and Scope of Filing

This memorandum details the methods and assumptions underlying the proposed 2016 premium rates for the State of Vermont's Individual and SHOP Exchange. These products will be issued by MVP Health Plan, Inc. (MVP), a non-profit subsidiary of MVP Health Care, Inc. The rate filing has been prepared to satisfy the requirements of 8 V.S.A §5104 as well as the requirements of the Federal ACA including 45 CFR Part 156, §156.80. The premium rates are effective between 1/1/2016 and 12/31/2016. This filing includes a new product that will be offered for the first time. The rate for this new product was developed consistent with the proposed renewal rates for the current products. MVP made uniform modifications to a number of the benefits being offered, and the updated forms have been submitted in a separate SERFF filing. The proposed rates reflect an average rate adjustment to prior rates of 3.0%, ranging from -1.8% to 27.3%. The 27.3% proposed increase is for the catastrophic plan, and the increase is driven by the demographics of the eligible population relative to the book of business average demographic factor. The largest increase proposed outside of this plan is 4.2%.

Market/Benefits

All products and rates included in this rate filing are available to both individuals and small employer groups. A description of benefits is included in Exhibit 1 of the rate filing. All Essential Health Benefits (EHBs) are covered. Only one EHB substitution was made as required by the Department of VHA, a substitution for the \$2,000 annual Private Duty Nursing benefit limit in the benchmark plan. MVP contracted Milliman to determine an actuarially equivalent visit limit. The supporting memorandum is included with the documents supplementing this filing. The non-standard products proposed by MVP and included in this rate filing include a wellness benefit in excess of the EHBs. This wellness benefit is included in all non-standard products and is filed as a mandatory rider, Form: FRVT-301.

To inform consumers of the availability and details of the products included in this filing, MVP will provide community outreach support as well as offer web and print product content and other printed product materials for VT plans. MVP will also have a mass media presence to further educate health care customers in Vermont.

The book of business affected by this rate filing reflects 3,324 policyholders, 4,227 subscribers and 6,417 members.

Experience Period Claims

MVP Health Plan, Inc. and MVP Health Insurance Co. historical claim data was the basis of the premium rate development. Non-ACA compliant and ACA compliant individual and small employer group data, association data, and large employer groups with 51-100 employees are included in the experience period data set. All grandfathered and non-grandfathered membership that will be eligible to purchase these policy forms in 2016 was included. There were no products excluded. MVP Health Plan, Inc. and MVP Health Insurance Co. reimburse providers at the same rate so no adjustments were made to the experience period data for fee schedule differences between the two companies.

MVP combined the experience of these separate pools of data to form a more credible experience base. The claim data is assumed to be fully credible. The experience period for the historical claims includes incurred dates of service beginning 1/1/14 through 12/31/14, completed as of 3/31/15. The experience period data complies with the single risk pool requirement of the Federal ACA.

Please see Exhibit 3 for a summary of MVP's experience period claims, market-wide adjustments to experience period claims, and the development of the paid Index rate PMPM. MVP is illustrating the development of the paid index rate PMPM separately for non-ACA compliant data separated by the Agriservices Association, pre-ACA small

group, pre-ACA individual, and pre-ACA large groups with 51-100 employees as well as ACA compliant small group and individual data. Market-wide adjustments and trend projections are being made to each of these experience period data sets which are then combined to determine the single risk pool paid Index rate PMPM. Details of the market-wide adjustments and trend projections being made to MVP's experience period data are discussed below.

Line 12 of Exhibit 3 reflects expenses for services such as capitations and other non-FFS medical expenses which come from MVP's General Ledger and are not processed through MVP's claims system. Please see the table below for detail on the items that comprise the capitation and non-FFS expenses reflected in MVP's experience period claims.

Summary of Experience Period Non-FFS and Capitation Amounts					
	Agriservices & Pre-ACA Large Group 51-100	Pre-ACA Individual Indemnity	Pre-ACA Small Group	Post-ACA Small Group	Post-ACA Individual
Other Medical Expenses not in claim warehouse	\$6.38	\$3.73	\$4.25	\$3.89	\$0.75
Dental	\$0.04	\$0.00	\$0.17	\$0.55	\$0.17
GME	\$0.34	\$0.00	\$0.16	\$0.08	\$0.00
Net Reinsurance Expense	\$0.21	\$0.21	\$0.21	\$0.21	\$0.21
Wellstyle Rewards	\$1.18	\$0.00	\$0.39	\$0.14	\$0.00
Medical Home and PCP Incentive	\$4.76	\$6.72	\$6.52	\$3.18	\$3.25
Lab Cap	\$0.00	\$0.00	\$0.00	\$0.10	\$0.08
Chiropractic Cap	\$0.00	\$0.00	\$0.00	\$0.76	\$0.78
Healthways and ASH Cap	\$1.97	\$2.43	\$2.51	\$1.30	\$2.12
Total	\$14.88	\$13.10	\$14.21	\$10.21	\$7.35

*Note: VT Paid Claim Surcharge (0.999% of paid claims) and NY HCRA Surcharge (0.25% of paid claims) are not reflected in figures above. Line 12 of Exhibit 3 = line 11 of Exhibit 3 * 1.249% + the applicable value shown above.

Adjustments to Experience Period Claims

MVP made an adjustment to ACA Compliant Individual claims to reflect the impact of cost-sharing reduction (CSR) payments received from the State of VT and Federal Government for 2014 dates of service. MVP's claim system processes CSR member claims to reflect MVP's expense without CSR payments as well as with CSR payments. The difference between these two amounts equals the CSR payment MVP will receive from the State and Federal Government which is reflected in line 3 of Exhibit 3.

An allowance for incurred but not reported paid claims (IBNR) was added to the experience period fee-for-service (FFS) medical claims. IBNR files were supplied directly from MVP's reserving actuary. MVP uses a combination PMPM and completion factor method to develop IBNR estimates, and Vermont specific data for the experience period was used to develop the factors. The fee-for-service experience period claims were reconciled with the IBNR lag triangles to ensure accuracy.

Experience period Rx rebates are reflected in line 7 of Exhibit 3. These values were determined by calculating the rebates received as a percentage of Rx claim expense for each of the separate pools of data over the experience period. MVP is assuming that we will receive the same percentage of rebates in the projection period as were received in the experience period. Please see the table below for experience period Rx Rebate detail:

Category for Rating	Rx Rebates	Rx Claims	Rebate %
Agriservices	(\$93,036)	\$539,283	-17.3%
Pre-ACA Individual Indemnity	(\$37,846)	\$136,017	-27.8%
Pre-ACA Small Group	(\$450,215)	\$2,870,552	-15.7%
Large Group 51-100	(\$163,256)	\$1,198,472	-13.6%
ACA Compliant	(\$174,500)	\$2,364,575	-7.4%
Total	(\$918,854)	\$7,108,899	-12.9%

To account for volatility in high cost claims, claims in excess of \$250,000 are being removed from the claim projection and replaced by a pooling charge. MVP is using an attachment point of \$250,000 in this rate filing as claims below this amount in the Individual market will be eligible for temporary reinsurance pool recoveries. The pooling charge of 4.7% was determined by computing the annual average cost of claimants in excess of \$250,000 relative to claimants less than \$250,000 for the eligible population between 2012 and 2014. Please see below for the high cost claim percentage by year:

Time Period	High Cost Claim %
2012	1.9%
2013	6.7%
2014	5.4%
Average	4.7%

Market-Wide Adjustments to Experience Period Claims

Several adjustments to the experience period incurred claim cost were necessary to adjust for benefit changes included in the EHB Benchmark plan as well as other factors not yet reflected in the experience period. The adjustments are explained below.

Adjustment for Average Policy Duration Reflected in Experience Period

MVP is making an adjustment to the claim projection for the impact of membership not representing a full 12-month contract over the experience period. Because deductibles are present in most of these products, paid claims are suppressed in the early months of a member's contract and are higher than average in later contract months. Therefore if the experience period membership is not evenly distributed by contract month, an adjustment to the claim costs should be made to reflect the expected claim costs for a 12-month contract period.

To determine the adjustment factor for the experience period claims cost, MVP used deductible suppression factors which were developed by analyzing commercial claims for members with 12 months of medical and Rx benefit coverage. MVP assumed that allowed claims were uniformly distributed by month and determined the expected paid claim cost for a given month relative to the average paid amount for 12 months. Factors were developed for a number of different deductible levels, and MVP split its experience period membership by these deductible levels to compute the appropriate adjustment factors.

Because a large portion of members did not enroll in ACA compliant plans until April 2014 and MVP has a large share of its ACA experience period membership enrolled in Bronze metal level products with higher deductibles, a significant upward adjustment to the experience period claim cost was required for these products. An upward adjustment to Agriservices and Large Group 51-100 experience period claims is driven by the fact that MVP's membership in these pools is more heavily weighted towards earlier contract months. Offsetting a portion of these increases is a downward adjustment to non-ACA compliant small group and Individual claims which were more heavily weighted towards later contract months.

The impact of these adjustments can be found in lines 14 and 15 of Exhibit 3.

Adjustments to Meet EHB Requirements

Benefits Added

Several new covered benefits need to be accounted for in Non-ACA compliant plans which include: pediatric dental, pediatric vision, disposable medical supplies, wigs, sterilization reversal, couples therapy, private duty nursing and removing limitations for SNF and Home Care.

Pediatric vision, disposable medical supplies, and pediatric dental claims were captured in MVP's ACA compliant 2014 data, and MVP has assumed that non-ACA compliant members will incur claims at the same rate in 2016. For the other benefits being added, MVP was not able to separate these specific costs from our ACA compliant data. MVP contracted with Milliman to quantify these benefit costs. Milliman provided these costs on an allowed basis and MVP converted them to paid amounts by multiplying the allowed amount times the experience period paid to allowed ratio of members enrolled in non-ACA compliant plans. An actuarial memorandum provided by Milliman which outlines the derivation of these costs has been included with this SERFF filing.

For non-ACA compliant plans, pharmacy coverage was not a mandated benefit. There were 1,289 MM included in MVP's non-ACA compliant small group pool of data that did not have Rx coverage in the experience period. MVP assumed that these members would incur costs at the average cost of the non-ACA Compliant Small Group members with pharmacy coverage in in the experience period.

Benefits Removed

Non-ACA compliant data includes benefits that are not covered in MVP's ACA compliant plans either as a standard covered benefit or via an optional rider. These benefits include: elective abortion and vision exams/hardware. The cost of these benefits was removed from the Non-ACA compliant data in the experience period.

The net impact of the claim cost adjustments to the projected incurred claim costs are illustrated on Lines 16 and 17 of Exhibit 3. Please see below for detail on these calculations:

Derivation of Medical EHB Adjustments for Non-ACA Compliant Data

<u>Benefits Added</u>	<u>PMPM</u>
Pediatric Dental	\$0.29
Pediatric Vision	\$0.06
Disposable Supplies	\$0.11
Other*	\$0.73
<u>Benefits Removed</u>	
Elective Abortion	(\$0.05)
Vision Exams and Hardware	(\$0.06)
Total	\$1.08

*Please see attached Milliman Actuarial Memorandum

Derivation of Rx EHB Adjustment to Non-ACA Compliant Small Group Data

1	Total Non-ACA Compliant Small Group MM	64,474
2	Non-ACA Compliant Small Group MM without Rx	1,289
3	Rx Incurred Claims PMPM for Non-ACA Small Group with Rx Coverage	\$45.43
4	Projected Rebate % for Block	-15.7%
5	PMPM Adjustment to Meet Rx EHB Requirement	\$0.77
	<i>Line 5 = 3 * 2 / 1 * (1 + 4)</i>	

Adjustment for Expected Covered Membership Risk Characteristics

MVP is applying a 2.0% morbidity improvement factor to its projection of non-ACA compliant experience period data. This adjustment is consistent with the GMCB’s decision and order from MVP’s 2014 Exchange filing, and MVP kept this adjustment in its 2015 rate filing as well. This adjustment is captured in line 18 of Exhibit 3.

Adjustment for \$1,300 Rx Out of Pocket Maximum (Bill H559)

Bill H559 was effective beginning with October 2012 renewals. Included in this regulation is an out-of-pocket maximum for prescription drug expenses. All of the claim adjustments attributable to Bill H559 are not being processed within MVP’s claim system during the experience period for this rate filing. Therefore, an adjustment to the experience period claims was needed. To quantify the impact of this mandate, MVP analyzed member level drug claims over the experience period. MVP captured amounts paid by members in excess of the Rx OOP maximum which will be in effect for 2016, or \$1,300. Please see the table below for a calculation of MVP’s adjustment for this item which can be found in line 19 of Exhibit 3.

Adjustment for \$1,300 Rx Out-of-Pocket Maximum

Experience Period Rx Claims PMPM for Block (net of Rebates)	\$34.40
Member Rx Cost-Share > \$1,300 in Experience Period FFS Rx Claims	\$0.57
Adjustment to Experience Period Rx Claims	1.7%

Adjustment for Leap Year in 2016

MVP’s experience period data is 2014 incurred claims. Because the projection period is 2016, an adjustment for the leap year is being made in line 20 of Exhibit 3. The adjustment is equal to 366/365 and reflects an additional day of claims in 2016 that was not reflected in the experience period.

Medical Trend Factors

The development of annual medical paid claim trend factors for 2016 is illustrated in Exhibit 2a. Consistent with recently submitted filings, MVP is applying 0% utilization trend to its data. Regression analysis has been performed on MVP’s utilization data in the past, and it was concluded that the predictive ability of the historical utilization trends was weak and not reliable. The assumed unit cost trends reflect known and assumed price increases from MVP’s provider network.

In addition to the medical cost inflation rate assumed from the historical experience period to the rating period, an adjustment is needed to reflect the impact of cost share leveraging on the carrier’s share of the medical cost. Leveraging is a result of the fixed nature of deductibles and copays in health benefit plans. When there are fixed member deductibles and copays, the carrier bears a greater portion of the cost of medical inflation. Therefore, an additional factor adjustment is made to the trend assumption to capture this cost.

The trend applied to the deductible portion of the experience period was derived using the distribution of claims for MVP's VT book of business. Claims below the average deductible amount over the experience period were trended at the applicable allowed trend rate while claims greater than the deductible were held flat.

The average annual allowed trend factor applied to FFS medical claims in this filing is 3.9%. The annual paid leveraging factor is 0.5% which results in an average annual paid FFS medical trend of 4.4% which can be found in line 22 of Exhibit 3.

Rx Trend Factors

Annual allowed Rx trend factors split by generic, brand, and specialty drugs are illustrated in Exhibit 2a. These trend factors were supplied by MVP's pharmacy benefit manager (PBM) and reflect their best estimate of expected changes to pharmacy costs and drug utilization. Supporting documentation illustrating how the Rx trends shown on Exhibit 2a were converted to paid trends for 2016 can be found in Exhibit 2b. The data shown in Exhibit 2b used to develop the paid Rx trend represents the single risk pool Rx data.

MVP has been in contact with its PBM on a regular basis, and the PBM has revised its trend forecasts for 2015 and 2016 since MVP submitted its 3Q 2015 rate filings. The trend forecast provided by MVP's PBM accounts for drugs coming off patent, changes in average wholesale price, new drugs being released to the market, and price competitiveness amongst generic and brand drug manufacturers.

In aggregate, the PBM's trend forecast has been revised lower for this filing relative to the 3Q 2015 filings. Some of the drivers of the PBM's reduced trend forecast include later generic launch dates of highly utilized drugs as well as lower unit cost trends emerging in 2015 than previously expected.

Please see the table below for a comparison of the Rx trend forecast included in this filing compared to MVP's most recently submitted filings:

Rx Trends Used in 2016 MVP VT Exchange Filing				
	2015 Trend		2016 Trend	
	Unit Cost	Utilization	Unit Cost	Utilization
Generic	2.1%	3.4%	3.3%	2.1%
Brand	11.1%	-11.4%	13.5%	-4.5%
Specialty	13.6%	5.0%	14.0%	6.0%

Rx Trends Used in 3Q 2015 MVP VT Filings				
	2015 Trend		2016 Trend	
	Unit Cost	Utilization	Unit Cost	Utilization
Generic	5.3%	4.2%	2.3%	3.5%
Brand	15.0%	-11.0%	12.6%	-4.0%
Specialty	22.0%	6.0%	25.3%	5.0%

The average annual allowed Rx trend in this filing is 10.6%, and the average annual paid Rx trend is 12.6% which can be found in line 23 of Exhibit 3.

The Annual FFS Claim Trend Projection factor shown in line 24 of Exhibit 3 represents the blended FFS annual trend projection. To arrive at the blended trend projection shown in line 24, the following calculation is performed: [line 5 * line 22 + line 8 * line 23] / [line 5 + line 8].

Paid Claim Surcharges, Capitation, and Non-FFS PMPM Projection

The paid claim surcharges, capitation, and non-FFS expenses shown in lines 27 and 28 of Exhibit 3 represents MVP’s best estimate of these costs in the projection period. Capitation and non-FFS expenses that were included in the experience period claims which will not be covered in the projection period have been removed. A summary of the expenses driving the capitation and non-FFS expenses in line 28 can be found below:

Capitation and Non-FRDM Expense Reflected in Rate Filing	
Other Medical Expense not in warehouse	\$3.18
Healthways	\$1.69
Net Reinsurance Expense	\$0.21
Medical Home and PCP Incentive (VT Blueprint)	\$3.81
Total	\$8.89

The NYS HCRA Surcharge of 0.25% included in these rates reflects the historical average amount of this surcharge for MVP’s VT members. MVP is assuming that the VT paid claim surcharge will remain unchanged in 2016 and equal 0.999%. Additionally, MVP is not assuming any anticipated changes in the VT Blueprint for this filing; the charge for this item is unchanged from the recently submitted 3Q 2015 rate filings.

The VT legislature is currently discussing a modification to the VT Blueprint. Under the proposal, the VT Blueprint assessment to carriers will increase. MVP estimates the proposed VT Blueprint charge to be \$5.17 PMPM vs. \$3.81 PMPM currently reflected in the rates. If this proposal passes and is implemented with a 2016 effective date, MVP’s rates would need to increase by 0.3% to account for changes to the VT Blueprint.

Impact of 3 R’s on Claim Projection

Transitional Reinsurance Program

Because this is a merged market, MVP had to make assumptions regarding whether members in non-ACA compliant plans would purchase individual coverage or small group coverage in 2016 which can be found in line 30 of Exhibit 3. MVP assumed that all members enrolled in the Agriservices Association and Individual Indemnity products during the experience period would purchase Individual coverage. MVP’s assumption for Agriservices was based on conversations with MVP’s internal sales team. For non-ACA compliant Small Group members, MVP assumed the same percentage of individual enrollment as was reflected in the 2014 ACA compliant products. For Large Group 51-100, MVP assumed all members would enroll in Small Group.

Line 31 represents MVP’s estimate of reinsurance recoveries for the temporary reinsurance pool in 2016 multiplied by the projected percentage of members enrolled in the individual market displayed in line 30. MVP is assuming that the assumed reinsurance recovery for individual members in 2016 will equal 4.2%. This was determined by computing 50% of the annual average value of claims between \$90,000 - \$250,000 for members in the VT single risk pool between 2012 and 2014.

Please see below for the percentage by year:

Time Period	% of Claims Subject to 2016 TRP Recoveries
2012	4.1%
2013	4.8%
2014	3.7%
Average	4.2%

To arrive at the PMPM value of the Temporary Reinsurance Program in 2016 the product of line 29 and line 31 are being computed. The total impact of this program for the single risk pool for 2016 is (\$9.20) PMPM.

Federal Risk Adjustment Program

No adjustment is being made to the paid index rate for the Federal Risk Adjustment this program. There was no market simulation completed by the State of Vermont and therefore there is no basis for assuming anything other than a \$0 payment transfer between carriers.

Federal Risk Corridor Program

No adjustment is being to the paid index rate to account for this program.

Plan Level Adjustments / Plan Specific Net and Gross Index PMPM rates

Line 34 of Exhibit 3 represents MVP’s projected paid index rate after adjustments for the single risk pool in 2016. This is the starting net claim cost that will be used to set 2016 premium rates. Gross Index rates and contract tier rates are calculated in Exhibit 6. The plan specific net claim cost for each plan is computed as follows on Exhibit 6:

$$\text{Adjusted Claim Cost For Pricing (see Exhibit 6)} = \frac{\text{Projected Paid Index Rate After Adjustments PMPM (line 34 of Exhibit 3)}}{[\text{Avg Inforce Actuarial Value} * \text{Avg Inforce Induced Utilization Factor}]}$$

$$\text{Plan Specific Net Claim Cost PMPM (see Exhibit 6)} = \text{Adjusted Claim Cost for Pricing} * \text{Benefit Actuarial Value} * \text{Plan Induced Utilization Factor}$$

The Plan Specific Gross Claim Cost PMPM for each plan is derived by making adjustments to the Plan Specific Net Claim Cost PMPM which account for Benefits in Excess of EHBs, PMPM expense loads, and percent of premium expense loads.

Actuarial Values and Induced Utilization Factors

The AV Metal Level for each plan was determined using the Federal prescribed Actuarial Value Calculator. Adjustments for aggregate deductibles, the VT Rx OOPM, and safe harbor prescription Rx benefits were made to the calculator results for the non-standard gold HDHP and non-standard bronze HMO plans. The actuarial certification of these adjustments has been included as an attachment to this filing in SERFF.

The Benefit Actuarial Value for each plan was determined using MVP’s in house benefit pricing tools. The pricing tools value the expected net paid claim cost associated with unique benefit plan designs from a starting single risk pool allowed amount. The AV is the ratio of the expected paid to allowed amount for each plan design. MVP did not reflect any induced utilization in the projection of the net paid amounts for each unique benefit plan. The same benefit pricing tool was used to compute the average inforce benefit actuarial value which equals 0.701 and can be found in Exhibit 6.

The induced utilization factors used to set premium rates and compute the average inforce induced utilization factor are sloped to comply with the HHS prescribed induced utilization factors of 1.00 for Bronze, 1.03 for Silver, 1.08 for Gold, and 1.15 for Platinum. The member weighted average inforce induced utilization factor over the experience period equals 1.047 and can be found in Exhibit 6.

Non Claim Expense plan level adjustments

Non claim expenses include both percent of premium loads and PMPM loads. The loads do not vary by plan. Each Standard and Non Standard plan is being loaded with the same PMPM and Percent of Premium loads. The loads are outlined below and are summarized in Exhibit 5.

Federal Taxes PMPM based

A total of \$2.57 PMPM is added for fees MVP must pay to the Federal Government per ACA regulations on a PMPM basis and includes the following 3 taxes: \$2.25 reinsurance contribution rate, \$0.15 HHS risk adjustment user fee and \$0.17 Patient Centered Outcome Research Fee.

Federal Taxes Premium based

This is referred to as the ACA Insurer Tax and will be assessed as a premium based tax applicable to all health insurance carriers. The fee collected by HHS will vary each year beginning with \$8 billion in 2014, \$11.3 billion in 2015 and 2016, \$13.9 billion in 2017 and \$14.3 billion in 2018. MVP is assuming 2% of premium will be paid to fund this tax for 2016. This is unchanged from 2015.

State Taxes Premium based – VT Vaccine Assessment

This load reflects a Vermont state assessment based on plan premiums used to fund immunizations provided by the state. The load of 0.6% is based on MVP's current charge for this program.

General Administrative Expense Load (Including QI component)

The total administrative expense load included as a plan level adjustment is equal to \$36.60 PMPM. MVP previously filed administrative expenses as a percentage of premium but is modifying this methodology in 2016. This amount includes \$1.50 PMPM to provide an expanded network to members purchasing exchange products in VT through a partnership with PHCS. The remaining \$35.10 PMPM is used to cover SG&A expenses as well as Quality Improvement/Cost Containment Programs (QI). Based on an analysis of MVP's 2014 expenses, 9% of MVP's total administrative expense was spent on QI. Therefore, \$3.16 PMPM of the \$35.10 PMPM administrative expense is attributable to QI.

MVP is currently working towards improving administrative efficiencies to reduce its operating expenses in 2016 and is striving to grow membership in this market. As a result, the administrative load built into rates is lower than MVP's current cost structure.

The following table summarizes the administrative expenses for small group and individual lines of business from the 2012, 2013, and 2014 Statutory Supplemental Health Care Exhibits (SHCE). The actual 2014 filing will not match the numbers below exactly as there was an internal allocation error when completing the SHCEs. Temporary reinsurance pool fees were not properly allocated by group size within each company in the filed SHCEs which has been reconciled in the table below.

Combined VT AR42 and AR44	Year	SHCE Admin PMPM*
Individual	2012	\$57.27
Small Group	2012	\$37.24
Combined	2012	\$39.98
Individual	2013	\$38.96
Small Group	2013	\$46.56
Combined	2013	\$45.58
Individual	2014	\$44.26
Small Group	2014	\$38.11
Combined	2014	\$40.30

**Reflects lines 6.6, 8.3, 10.1, and 10.4 of SHCE, Part 1*

Profit/Risk Charge

MVP is not building a profit/risk charge into the VT Exchange premium rates for 2016. MVP understands the necessity of building a risk charge into premium rates to protect against adverse experience relative to pricing assumptions but is willing to temporarily remove this charge to aid in our competitive position in this market.

Bad Debt Expense

A plan level adjustment equal to 0.40% of premium was added to account for non-payment of premium risk. MVP has experienced an increase in bad debt in the VT Individual Exchange which is the driver of this increase.

Rider FRVT-301 (Wellness Benefit in Addition to EHBs)

Members purchasing a non-standard plan will receive MVP's Member Wellness Incentive (Form: FRVT-301). This benefit provides adult members with up to \$50 per year in incentives. MVP projects the net cost of this benefit to equal \$0.07 PMPM. This figure was derived by analyzing the cost of Rider VT-301 for 2014 dates of service relative to the non-Standard population receiving this benefit. The incentive for this benefit in 2014 was \$200 and had a cost of \$0.28 PMPM. Because the reimbursement is being reduced to \$50, MVP divided the \$0.28 PMPM amount by 4 to reflect the 2016 reimbursement of \$50 per year. This additional cost was added as a plan level adjustment to the non-Standard plans.

Catastrophic Plan Adjustment

An additional plan level adjustment was applied to the catastrophic plan to account for the unique age eligibility requirements as permitted by the Federal ACA Rules. MVP did not reflect the fact that individuals facing financial hardship could also qualify to enroll in this plan. As of March 2015, all of the 149 members enrolled in this plan meet the age qualification for enrollment (< 30 years old).

MVP determined the adjustment factor for this plan by calculating the HHS Age factor for the eligible population and comparing it to the HHS Age factor of the experience period membership. The eligible population was assumed to be any member under the age of 30 that was not attached to a subscriber age 30 or older. It was assumed that a member under the age of 30 and attached to a subscriber age 30 or older would enroll as a dependent in a non-catastrophic plan. The eligibility adjustment factor is equal to 0.656 and is reflected in the "Induced Utilization Factor" adjustment of Exhibit 6 for this plan.

Catastrophic Plan Level Adjustment	
	HHS Age Factor
Ages 0-29, Meeting Subscriber Qualifications	1.038
Single Risk Pool Total	1.583
Catastrophic Adjustment	0.656

Per Contract Premium Rates

The Plan Specific Gross Claim Cost PMPMs computed in Exhibit 6 are converted to per contract premium rates using the computed single conversion factor and the prescribed standard load ratios.

The single conversion factor (SCF) was calculated using subscriber and member exposure months by contract type from the experience period used to develop the Index rate. The SCF = weighted average contract size/ weighted average load ratio. Please see Exhibit 4 for the derivation of the SCF.

Loss Ratio Information

The traditional target loss ratio (claims cost / premium) for the rates proposed in this rate filing is 87.7%. After making adjustments for taxes/assessments and expenses associated with quality improvements, the Federal target loss ratio for the rates proposed in this filing is 91.3%. Please see the table below for more detail:

Target Loss Ratio for 2016 VT Exchange	
A) Claims Expense (line 34, Exh 3)	\$367.51
B) Taxes/Assessments	\$13.47
C) Quality Improvement	\$3.16
D) Premium	\$419.26
E) Traditional Loss Ratio = A) / D)	87.7%
F) Federal Loss Ratio = [A) + C)] / [D) - B)]	91.3%

Please see the table below for a summary of experience period loss ratios for the separate pools of data. Note that the ACA Compliant Individual claim expense reflects expected recoveries from the 2014 Federal Reinsurance Program which is not reflected in the experience period data shown in Exhibit 3.

VT Data Pool	Member Months	Total Claims PMPM	Earned Premium PMPM	Taxes / Assessments PMPM	Quality Improvement Expense	Traditional Loss Ratio	Federally Adjusted Loss Ratio
Non-ACA Compliant Agriservices	16,159	\$307.49	\$426.91	\$20.47	\$3.37	72.0%	76.5%
Non-ACA Compliant Individual Indemnity	10,783	\$215.36	\$219.22	\$17.92	\$3.52	98.2%	108.7%
Non-ACA Compliant Small Group	64,474	\$377.25	\$413.08	\$28.65	\$3.34	91.3%	99.0%
Non-ACA Compliant Large Group 51-100	28,372	\$376.95	\$371.30	\$22.22	\$3.44	101.5%	109.0%
ACA Compliant Small Group	23,006	\$288.51	\$385.34	\$7.19	\$3.76	74.9%	77.3%
ACA Compliant Individual	37,150	\$280.48	\$359.44	\$6.91	\$4.23	78.0%	80.8%
Small Group + Individual Single Risk Pool	179,944	\$329.91	\$381.49	\$19.03	\$3.61	86.5%	92.0%

Actuarial Dataset, Rate Increase Exhibit, URRT, and Federal Memorandum

Also included with this rate filing are L&E's Actuarial Dataset, a projection of rate increases for ACA compliant subscribers, the Federal URRT, and Federal Actuarial Memorandum.

Actuarial Certification

I, Matthew Lombardo, am a Member of the American Academy of Actuaries. The projected Index Rate and Adjusted Paid Amount used in the development of these proposed premium rates is in compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.80(d)(1)) and developed in compliance with the applicable Actuarial Standards of Practice. I have examined the assumptions and methods used in determining MVP's requested rates. Based on my review and examination, it is my opinion that the proposed premium rates are reasonable in relation to the benefits provided and that they are not excessive, nor inadequate, nor unfairly discriminatory. They are developed using only the permitted rating classifications. The Adjusted Paid Amount and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates. The Standard AV Calculator was used to determine the Metal AV Value to be show in Worksheet 2 of the Part I Unified Rate Review template for all the plans.

I certify that I am knowledgeable as to the Vermont laws and regulations that apply to this filing and that, to the best of my knowledge and belief, this filing is in compliance with such laws and regulations and provides all required benefits.

I am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the PPACA and the HCERA of 2010.

I certify that each rate filing has been prepared in accordance with the following; ASOP#5, ASOP#8, ASOP#12, ASOP#23, ASOP#25, ASOP#26, and ASOP#41.

**ACTUARIAL CERTIFICATION
 FEDERAL ACTUARIAL VALUE ADJUSTMENT
 VERMONT EXCHANGE
 Gold HDHP Vitality Plus 2400
 Bronze HMO Vitality Plus 5000**

I, Kathleen Fish, VP of Actuarial Services and Chief Actuary for MVP Health Care, am a member of the American Academy of Actuaries and meet the qualification standards to render this certification. MVP Health Plan, a fully owned subsidiary of MVP Health Care, offers a range of products on the Vermont Exchange. Standard and Non Standard Plans are offered. Standard plans are prescribed by the State of Vermont and are separately certified where necessary by an Actuary representing Wakely Consulting Firm. Nonstandard plans are filed at the discretion of MVP. MVP has 2 nonstandard benefit plans, Gold HDHP Vitality Plus 2400 and Bronze HMO Vitality Plus 5000, with benefit features that don't fit the parameters of the Federal Actuarial Value Calculator and therefore being certified herein.

Pursuant to 45 CFR 156.135(b) one of two permitted alternative methods must be used to determine any final adjusted Federal AV. I used the AV Calculator to determine the Federal AV for the plan provisions that do fit within the calculator parameters and then calculated an actuarial adjustment factor to apply to the calculator produced AV to account for the plan features that materially deviate from the calculator parameters. The product of the Federal Calculator produced AV times the actuarial adjustment factor is the final Federal AV for the benefit plan.

I certify that the adjustments made are appropriate and in accordance with generally accepted actuarial principles and methodologies.

The following 3 benefit features for the Gold HDHP Vitality Plus 2400 were determined to not fit the Federal Calculator:

- VT secondary Rx OOP max
- Aggregate Family Deductible
- Safe harbor prescription drug benefits excluded from the plan deductible

The following benefit feature for the Bronze Vitality Plus 5000 was determined to not fit the Federal Calculator:

- VT secondary Rx OOP max

To determine the adjustment factors, I used MVP's proprietary benefit pricing tool to value the AV for these plans first excluding the above features that don't fit the calculator and again to value to AV with the above benefit changes. The ratio of the two AVs is the actuarial adjustment factor used to modify the Federal Calculator computed AV.

Plan Description	MVP determined AV	Federal AV before and after adjustment
Gold HDHP Vitality Plus with no secondary Rx OOP max, with embedded single deductibles and with no safe harbor drug benefit	74.60%	77.87%
Gold HDHP Vitality Plus including the secondary Rx OOP max, the aggregate family deductible and the safe harbor drug benefit	74.99%	78.26%
Bronze HMO Vitality Plus with no secondary Rx OOP max	58.06%	59.08%
Bronze HMO Vitality Plus with secondary Rx OOP max	58.80%	59.85%

Actuarial Adjustment factor for Gold Plan: $1.005 = 74.99\% / 74.60\%$
 Final Federal AV for Gold HDHP Vitality Plus 2400 = $77.87\% \times (1.005) = 78.26\%$

Actuarial Adjustment factor for Bronze Plan: $1.013 = 58.80\% / 58.06\%$
 Final Federal AV for Bronze HMO Vitality Plus 5000 = $59.08\% \times (1.013) = 59.85\%$

March 18, 2013

To Kathleen Fish, Matt Lombardo (MVP)
From Howard Kahn (Milliman)
Subject Vermont EHB Pricing

As requested, we have estimated the cost of the following benefits included by Vermont in its Essential Health Benefits (EHB) package:

- Private duty nursing
- Sterilization Reversal
- Couples therapy
- Wigs
- Pediatric vision

MVP Health Care’s (MVP) does not currently offer these benefits in Vermont.

In addition, we have:

- Estimated the annual visit limit equivalent to an annual \$2,000 limit for private duty nursing.
- Estimated the impact of removing contractual limits on days in a skilled nursing facility (SNF) and home health care visits.

Results

Our estimates for the incremental 2014 allowed Per Member Per Month (PMPM) cost, assuming a standard population, for each of the additional benefits are:

Benefit	Estimated 2014 Allowed PMPM
Private Duty Nursing	\$0.31
Sterilization Reversal	\$0.00
Couples Therapy	\$0.60
Wigs	\$0.02
Pediatric Vision	\$1.46

In addition, we estimate:

- A 4 visit annual limit is equivalent to a \$2,000 annual limit for private duty nursing in 2014.
- Increasing SNF day limits of 30, 45, 60, and 120 to unlimited results in an insignificant increase to the paid PMPM.
- Increasing home health visit limits of 40, 60, and 200 to unlimited results in an insignificant increase to the paid PMPM.

Methodology

Private Duty Nursing

Using the 2010 Truven Health Analytics MarketScan Commercial database (MarketScan)¹ for the Northeast region we identified all claims for the following codes provided by MVP with a place of service equal to 12:

- HCPCS
 - S9123
 - S9124
 - T1000
 - T1002
 - T1003
 - T1030
 - T1031

We trended the resulting per member amount by the secular trend for professional service of 6% per year recommended by Milliman's Health Cost Guidelines (HCGs)² for 4 years.

Sterilization Reversal

Using the 2010 MarketScan Commercial database we identified all claims for the following codes provided by MVP:

- HCPCS
 - 55400
 - 58750
 - 58752
 - 58760
 - 58770
- ICD-9 Diagnosis Codes (primary position)
 - V26.0
 - V26.22

¹ This database contains all paid claims generated by approximately 35 million commercially insured lives. The MarketScan database represents the inpatient and outpatient healthcare service use of individuals nationwide who are covered by the benefit plans of large employers, health plans, government, and public organizations. The MarketScan database links paid claims and encounter data to detailed patient information across sites and types of providers, and over time. The annual medical database includes private sector health data from approximately 100 payers.

² The HCGs are a cooperative effort of all Milliman health actuaries and represent a combination of their experience, research and judgment. An extensive amount of data is used in developing the HCGs and that data is updated annually. The HCGs provide a flexible but consistent basis for the determination of health claim costs and premium rates for a wide variety of health plans. The HCGs are developed as a result of Milliman's continuing research on health care costs. First developed in 1954, the HCGs have been updated and expanded annually since that time. The HCGs are continually monitored as they are used in measuring the experience or evaluating the rates of health plans, and as they are compared to other data sources.

- ICD-9 Procedure Codes
 - 63.82
 - 66.79

The total number of services for these codes in nationwide 2010 MarketScan was insignificant with a resulting allowed PMPM of almost \$0.00. Therefore, we estimate that the addition of this benefit will not materially increase claims costs.

Couples Therapy

Using the 2010 MarketScan Commercial database we identified all claims for the following codes:

- HCPCS
 - 90847
 - 99510
- ICD-9 Diagnosis Code (primary position)
 - V61.10

We refined the list of codes provided by MVP to include only codes which we believe represent couple therapy services.

We trended the resulting per member amount by the secular trend for professional service of 6% per year recommended by Milliman's HCGs for 4 years and applied the psychiatric area factor of 1.04 recommended by Milliman's HCGs for Vermont.

Wigs

Vermont is including wigs in its EHB when hair loss is due to disease or chemotherapy. Since wigs are not a commonly offered benefit, we are unable to derive credible utilization rates from the MarketScan database. Instead, we refer to other published literature to estimate the incremental cost for wigs due to chemotherapy, assuming no additional cost for other diseases:

2014 Allowed Wig PMPM Development		Source
Cancer Incidence (Under 65)	0.22%	http://seer.cancer.gov/statfacts/html/all.html
Probability of Losing Hair Under Chemo	65%	http://www.derma-haarcenter.ch/files/Directory/Publikationen/Chemotherapy.pdf
Percent Female	48%	http://seer.cancer.gov/statfacts/html/all.html
2014 Unit Cost for Wigs	\$379.31	2010 Nationwide MarketScan (HCPCS A9282, trended annually at 6%)
2014 PMPY	\$0.26	
2014 PMPM	\$0.02	

Pediatric Vision

Vermont is including pediatric vision (to age 21) in its EHB:

- 1 vision exam per year
- \$150 per year for vision hardware

We priced out the additional allowed PMPM cost for these benefits by calibrating our 2013 HCGs to Vermont and assuming 120% of Medicare reimbursement.

Annual visit limit for private duty nursing

To convert an annual dollar limit to an annual visit limit for private duty nursing services, we develop a claims probability distribution from 2010 MarketScan for Northeast states. We used the codes described above to identify private duty nursing procedures.

The probability distribution table shown in Exhibit 1 represents 2010 claims trended by the secular trend for professional service of 6% per year recommended by Milliman's HCGs for 4 years. The table estimates the probability that the allowed cost for a private duty nursing visit will fall within certain ranges.

Based on a simulation of 10,000 trials, we estimated that 4.20 visits on average will exceed \$2,000.

Benefit Relativities for increased contractual limits on skilled nursing facility (SNF) and home care

MVP currently offers plans in Vermont that have:

- SNF day limits of 30, 45, 60 and 120
- Home health care visit limits of 40, 60 and 200

Using the 2013 SNF length of stay tables found in the HCGs, adjusted for Milliman's standard plan design (80/20 coinsurance with a \$500 deductible) and Vermont's utilization and unit cost, we estimate an insignificant increase in total estimated paid PMPM amounts if the limit for day in SNF is removed.

Since the HCGs do not have home health care visit distributions, we developed a probability distribution for members utilizing home health care from 2010 MarketScan for Northeast states. Based on these results, we estimate an insignificant increase in total estimated paid PMPM amounts if the limit for home health care visits is removed.

Data Reliance

We relied on the following files provided by MVP:

- VermontNewBenefits.pdf
- Codes for VT Exchange Benefits.xlsx

Additional Notes and Caveats

Our models are based on the assumptions listed above and the data you have provided to us. If you believe any of our assumptions are incorrect, please let us know and we will amend our models accordingly. Actual experience will vary from expected.

This memo has been produced for the sole benefit of MVP and is not for distribution outside MVP.

Howard Kahn is employed by Milliman, Inc. and is a member of the American Academy of Actuaries and meets the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion in this report.

cc: Rob Parke (Milliman)

RE: State of Vermont Actuarial Value Certification for 2016 Standard Plan Designs

Dear Dana:

The Affordable Care Act requires that health care coverage provided by issuers to non-grandfathered individual and small groups must cover all Essential Health Benefits (EHBs) and have Actuarial Values (AVs) that fall under the Platinum (90% AV), Gold (80% AV), Silver (70% AV) or Bronze (60% AV) tiers. The ACA allows for a 2% de minimis range around these target AVs. For example, any plan design that has an AV from 68-72%, would be considered a Silver plan. The Center for Consumer Information and Insurance Oversight (CCIIO) recently released the final 2016 Actuarial Value Calculator (AVC)¹ that issuers must use to determine the AV of a plan. While CCIIO anticipates that most plans will be able to use the AVC without modification, some plan designs will have features which are not supported by the AVC. In these instances, an actuary can either modify the inputs to most closely represent the plan design or an actuary can modify the results of the AVC to account for the features not supported by the AVC. An actuarial certification documenting the development of the AV for these plan designs is required.

The State of Vermont (State) is standardizing several plan designs that all issuers offering plans in the exchange, Vermont Health Connect, must offer. Issuers must offer the standard plan designs in the individual and small group merged market. One Platinum, one Gold, two Silver and two Bronze standard plan designs were developed for Vermont Health Connect. There is a traditional deductible plan at each of the four metal levels and a High Deductible Health Plan (HDHP) at each of the Silver and Bronze levels. For each of the Silver standard plan designs, the cost sharing reduction plan designs are also standard. Cost sharing reduction plan (CSR) designs were developed at each of the 73% (federal), 77% (Vermont specific), 79% (Proposed, Vermont specific), 83% (Proposed, Vermont specific), 87% (federal) and 94% (federal) AV levels. The actual AVs and the corresponding FPLs for Vermont's CSR plans will not be final until after the state legislative session, likely in May. The State is requesting issuers file all potential CSR variations (six in total), including the two new proposed AV levels (79% and 83%).

The federal HDHP minimum deductible and Maximum Out of Pocket (MOOP) limits are not yet released for 2016. The 2015 minimum single deductible and MOOP are \$1,300 and \$6,450, respectively. The deductible increases \$50 every two to three years and the MOOP increases around \$100 a year on average. Should the plan designs need to change once these limits are released or as a result of the state legislative session regarding the CSR plans, the Department of Vermont Health Access (DVHA) will present the updated designs to Green Mountain Care Board (GMCB) for their information and approval, if needed.

¹ <http://www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/index.html>

The State contracted with Wakely Consulting Group, Inc. (Wakely) to assist in the development of the standard plan designs. A list of the changes from the 2015 standard plan designs is in Appendix B. At a high level the changes for each base standard plan are:

- Platinum – no changes
- Gold – no changes
- Silver Deductible – changes made to the medical deductible, drug deductible, medical MOOP, and specialist, generic drug, and preferred brand drug copays
- Bronze Deductible – changes made to the medical deductible, drug deductible, medical MOOP, and specialist copay
- Silver HDHP – changes made to the medical deductible, medical MOOP, and general coinsurance
- Bronze HDHP – changes made to the medical deductible and medical MOOP

For the Silver and Bronze HDHP plans, there are also now two options from which the issuers may choose one at each level. The 2016 regulations² require that all individuals, even those in non-self only contracts, have an out of pocket limit no more than the single limit (\$6,850 in 2016). This impacts HDHPs where the aggregate MOOP application could require an individual to have out of pocket costs higher than the individual limit. Compliance with the new regulation can be done by adjusting the family MOOP in two ways. The first option has an aggregate family medical MOOP with an embedded \$6,850 individual maximum. The second option has a stacked family medical MOOP. Both options comply with the new federal regulations on individual maximum out of pocket costs. Since the first option has operational challenges, the issuers are allowed to choose one from either Option for the HDHP standard plans.

In addition to the standard plans, the State of Vermont is also requesting that issuers offer a Gold plan where the deductible and MOOP are set at the same amount. This means that once the deductible is met, the plan pays 100% of all services. Unlike the standard plans, it is not required that issuers offer this plan, but it is highly recommended. The issuer may determine the amount at which to set the deductible and MOOP, as long as they are equal and the resulting plan falls in the Gold tier. An example of this plan design is in Appendix C.

Three of the standard plan designs (and the HDHP cost sharing reduction plan designs) have features not supported by the AVC and thus an actuarial certification is required. The remaining standard plan designs and their corresponding CSR plans have features that may warrant an AV adjustment but no explicit adjustment or actuarial certification has been done for these plans. In developing these standard plan designs and the resulting actuarial certification, Wakely also followed applicable Actuarial Standards of Practice (ASOP) as detailed in Appendix D and including:

- ASOP No. 23 *Data Quality*;
- ASOP No. 25 *Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverage*; and
- ASOP No. 41 *Actuarial Communications*.

EXECUTIVE SUMMARY

A summary of Vermont's standard plan designs is in Appendix E. The Silver HDHP and both Bronze plans have design features that are both significant and not supported by the AVC. The Silver HDHP cost sharing reduction plan designs have similar features. The issuers that opt to offer pediatric dental would also have design features that could be significant and not supported by the AVC. While most plans have some

² <http://www.gpo.gov/fdsys/pkg/FR-2015-02-27/pdf/2015-03751.pdf>

subtleties in their design that are not supported by the AVC, CCIIO has stated and regulations dictate that modifications should be made only for substantial differences. The four potential substantial differences that Wakely considered include:

1. Family deductible and Maximum Out of Pockets (MOOPs). There are two common types of applications for deductibles and MOOPs, commonly referred to in Vermont as stacked and aggregate³. The data supporting the AVC is only at the member level, and thus most closely resembles the stacked application of deductibles and MOOPs. Most HDHP plans use the aggregate application of deductible and MOOPs which can significantly lower the AV since a family of two would need to accumulate to a deductible that is twice that of a single contract. Note that due to the new regulation if the family MOOP is more than the single limit of \$6,850, the MOOP must either be stacked or there must be an embedded individual MOOP of \$6,850. Wakely had previously developed a model to account for aggregate family deductibles and has modified this model to account for stacked and embedded MOOPs for HDHPs. Thus, a specific adjustment has been made to the appropriate AVs for HDHPs.
2. Vermont implemented a statute (H.559 Sec. 32. 8 V.S.A. § 4089) for prescription drug deductibles and MOOPs. The requirement mandates, in part, that the MOOP for prescription drug costs in any plan design shall not exceed the minimum deductible amount for HDHPs per Section 223(c)(2)(A)(i) of the Internal Revenue Code of 1986 (\$1,300 and \$2,600 for individual and family coverage in 2015; 2016 amounts are not yet known). The requirement also states that for HDHPs the cost sharing benefit for prescription drugs must start after the minimum deductible amount for HDHPs (same \$1,300 and \$2,600 for individuals and family coverage) is met, but the amount may be met with either medical or prescription drug claims. This means that for all HDHPs, for purposes of prescription drug coverage, the deductible is considered met when accumulated medical and drug claims reach \$1,300 for individual or \$2,600 for family, regardless of what the medical deductible amount is. Similarly, the MOOP for only drug claims (including amounts used to accumulate to the deductible) is \$1,300 or \$2,600, regardless of the amount of the overall MOOP which will include both drug and medical claims.

Since for an integrated deductible and MOOP, only one amount is able to be input in the AVC, the value of the lower drug deductible and MOOP cannot be modeled in the AVC. This statute has a significant impact on AV, particularly at the lower AV tiers where the difference between the medical and prescription drug deductible and MOOP is greater. Wakely had previously developed a model to account for Vermont's prescription drug regulation and thus, where appropriate, a specific adjustment has been made to the AVs using this model.

³ Stacked deductibles and MOOPs are typical in traditional deductible plans where the individual deductible and MOOP apply to each member of a contract and the family deductible and MOOP is used as a protection for contracts where multiple members have claims. For example, if the family MOOP is two times the individual MOOP but three members of a contract all would have reached their individual MOOP, it limits the family's liability to two times the individual MOOP.

Aggregate deductible and MOOPs are typical in HDHPs where all claims for all members of a non-single contract accumulate to the family deductible and MOOP. For two person or family contracts where only one member has significant claims, the member still must reach the higher deductible and MOOP amounts which makes the average member liability higher under an aggregate deductible.

3. In the current market, most Vermont HDHPs waive the deductible for preventive prescription drugs. This is another plan feature not currently supported by the AVC. Wakely has not analyzed the exact portion of drugs this represents and this may vary by issuer. The impact to AV would only apply to drug costs that would normally be incurred prior to the member reaching the deductible. Any costs after the deductible is met and after the MOOP is met would be similar to the AVC. It is possible that this design feature could have a significant impact on the AV. However the impact of this benefit is likely not enough to warrant an additional analysis. Based on some high level estimates, Wakely believes the maximum impact to AV for this design feature is approximately 0.5% with the likely expected impact to be half of that. Since Wakely did not quantify the exact adjustment of the preventive drug difference for HDHPs, Wakely did not make a specific adjustment but did make sure that any AVs developed for HDHPs were at least 0.5% below the high end of the de minimis range in order to account for this increased benefit. It is expected that the impact for these drugs would be highest for the bronze plan where the deductible is highest and the impact would decrease as deductibles decrease (and AVs increase).
4. If a plan covers pediatric dental, starting in 2015 there can be no cost sharing for Class I (basic) pediatric oral health essential health benefits. Appendix F contains a list of the dental procedure codes that are classified as Class I and have no cost sharing. Pediatric dental is not explicitly reflected in the federal AVC. It is included as part of the “other” benefits which are assumed to have average cost sharing for the plan. The reduction in cost sharing for the Class I benefits will result in a higher AV than what is modeled in the AVC, particularly for the higher deductible plans. It is possible that this design feature could have a significant impact on the AV. Based on some high level estimates, Wakely believes the maximum impact to AV for this design feature is approximately 0.5%. Since this adjustment may apply to some issuers and not to others, Wakely did not make a specific adjustment but did make sure that any AVs developed were at least 0.5% below the high end of the de minimis range in order to account for this benefit. It is expected that the impact for these drugs would be highest for the bronze plan where the deductible is highest and the impact would decrease as deductibles decrease (and AVs increase).

There are other potential design features for which adjustments could be made. However, given the expectation that adjustments be made for only the most substantive deviations, Wakely does not believe additional adjustments are warranted. It is also important to note that the bucketing of claims and the methodology used to calculate the AVC are not always clearly defined. Thus, at times it is difficult to ascertain whether an adjustment is warranted and how that adjustment would be estimated.

As stated, Wakely made explicit adjustments to account for the aggregate family deductible/MOOP and Vermont’s prescription drug regulation. These adjustments are described in detail in the Methodology section. For the preventive prescription drug and pediatric dental benefits, Wakely did not make an explicit adjustment but did allow room in the AV such that an increase of up to 0.5% would not result in the AV falling outside of the required range.

The table in Appendix G shows all plan designs for which adjustments were made, the adjustments considered, the original AV from the AVC, and the final adjusted AV. The pediatric dental consideration may also apply to the Platinum, Gold and Silver Deductible and CSR plans when issuers include the benefit but no explicit adjustment was made since coverage of the pediatric dental benefit is optional and the impact to higher AV plans is less significant.

The IRS has yet to release the minimum deductible amount for HDHPs for 2016. The drug deductibles and MOOPs for HDHPs may need to change if the IRS changes the minimum deductible from the 2015 amount of \$1,300. The current plan designs use the 2015 amounts.

METHODOLOGY

Since several of the standard plan designs have features not supported by the AVC, Wakely developed an HDHP model to capture the impact of these features on the AV. It was anticipated that the AVC would not accommodate all of the Vermont plan design features and this model was developed several months prior to the draft 2014 AVC being released. While there are similarities in the data used (for example, only group data is included in both models), there are also differences (for example, the HDHP model includes all members regardless of duration while the AVC includes only members who are enrolled the full 12 months).

If a plan does have substantive differences from what the AVC allows, there are two allowed approaches defined in the federal regulations. The first allows the actuary to adjust the inputs of the plan design to “fit” it into the AVC. The second allows the actuary to put in as many of the design features as possible into the AVC and then adjust the resulting AV to account for the unique design features. Wakely determined the second approach was most appropriate for the Vermont plan design differences. Thus for the plan designs where adjustments were made, Wakely first input as much of the plan design as possible into the AVC and then modified the resulting AV to account for the unique features.

The following discusses the HDHP model that Wakely developed and the process used to adjust the actuarial values from the AVC.

HDHP Model

Anticipating the need to quantify some of Vermont’s unique plan design features, in mid-2012 Wakely developed an HDHP model that would account for both aggregate deductibles and MOOPs as well as quantify the impact of Vermont’s prescription drug regulation. For the 2016 AV adjustments this model was updated with more recent data and an option was added to account for embedded/stacked MOOPs.

In developing the model Wakely was provided with membership and medical and pharmacy claims data extracts from the Vermont Healthcare Claims Uniform Reporting and Evaluation System (VHCURES). Filters were then applied to the data to target a specific population for the model and reduce the amount of records to work with. The data used included:

- Allowed commercial medical and prescription drug data that was incurred in 2012 (original model used 2010 data)
- Products types HMO (non-Medicare risk), PPO, POS and EPO
- Used claims with a Useflag='0'
- All market categories except individual
- Limited to members in select payer ids

After all filters were applied, the remaining data included allowed claims and membership for approximately 2.3 million member months.

The methodology developed for the HDHP model does not use the traditional approach of continuance tables. When determining the paid claims and resulting actuarial value of the plan designs where the prescription drug regulation is a factor, the order in which the claims occur is important. Continuance tables fail to recognize the impact of the order of the claims on actuarial values. Thus, the HDHP model re-prices the claims based on the inputs provided in the model rather than rely on continuance tables.

The HDHP model allows a user to enter the following:

- Medical and Prescription drug deductible amounts for both individual and family contracts. These amounts can differ but the model assumes the amounts are always integrated, or that both medical and drug claims will accumulate to both deductibles, even if different amounts.
- Medical and prescription drug maximum out of pocket amounts for both individual and family contracts. These amounts can differ and the model allows for different treatment of the MOOPs as noted below.
- Medical and prescription drug coinsurance amounts. If the plan design includes copays, an effective coinsurance needs to be input.
- The structure of the deductibles and MOOPs. As can be seen in the table below, the model can distinguish between aggregate and stacked deductibles and MOOPs. It also allows for different accumulations of claims to the medical and prescription drug MOOPs. There are six structural selections available in the model, described in the table below. Option 5 is most closely aligned to the federal AVC. Option 6 represents the design of the Vermont HDHPs. This changed from Option 1 due to the new federal regulations.

Options	Costs that Accumulate			Deductible / MOOP Type
	Deductible	Maximum Out-of-Pocket (MOOP)		
		Medical	Rx	
1	Medical & Rx	Medical & Rx	Rx Only	Aggregate
2	Medical & Rx	Medical & Rx	Rx Only	Stacked
3	Medical & Rx	Medical Only	Rx Only	Aggregate
4	Medical & Rx	Medical Only	Rx Only	Stacked
5	Medical & Rx	Medical & Rx	Medical & Rx	Stacked
6	Medical & Rx	Medical & Rx	Rx Only	Aggregate Deductible /Aggregate MOOP with Embedded Ind MOOP (can also be used for Stacked MOOP)

Adjusted AV Calculations

Using the federal AV calculator and the HDHP model as outlined above, the following methodology was used to develop the adjusted AV calculations for the HDHPs:

1. The plan designs were entered into the AVC ignoring the separate prescription drug deductible and MOOP thresholds. The resulting AV is the unadjusted value, which does not account for the prescription drug regulations or the aggregate family deductible and MOOP levels.
2. The HDHP model was used to determine the revised AV.
 - a. The same plan design input into the AVC was input into the HDHP model. The HDHP model only allows for coinsurance. Since the HDHP designs include copays, an effective coinsurance was developed for each plan design. The effective coinsurance amounts were developed separately for medical and prescription drug services using the allowed weights

and average cost per service from the federal AVC continuance tables for the relevant metal tier.

- b. The HDHP model was normalized to the AVC for each plan design. This means the same plan design, ignoring the prescription drug thresholds and assuming a stacked family deductible and MOOP, was input into the HDHP model and the underlying data was adjusted to arrive at the same AV as the AVC. This was done to ensure the same starting AV in both models and to try to mirror the induced utilization in the AVC. The normalization factors were reviewed for reasonability and deemed reasonable given they are accounting for trend, regional differences in cost and utilization and induced utilization.
 - c. The plan design in the HDHP model was adjusted to lower the prescription drug deductible and MOOP inputs (if applicable) to the appropriate plan design amounts and also to adjust the prescription drug MOOP to only consider prescription drug claims (the medical MOOP amount continues to use both medical and prescription drug claims). The application of deductible and MOOP was also changed to use an aggregate family deductible and either a stacked MOOP or an aggregate family MOOP with an embedded individual MOOP. For the stacked application of the MOOP, all individuals are subject to a MOOP equal to the individual MOOP in addition to the family MOOP. The aggregate family MOOP has an embedded individual MOOP equal to \$6,850.
3. The resulting AV from the HDHP model is used as the final AV for tier placement.

The HDHP model was intended only for HDHPs where medical and drug claims both accumulate to the deductible. The Bronze deductible plan needs to be adjusted to account for the lower prescription drug MOOP, but the deductible plan has separate medical and drug deductibles. Thus, the HDHP model was used but with a slight variation in methodology. The following highlight the differences in methodology used only for the Bronze Deductible plan.

1. Same as for HDHPs, as much of the plan design as possible was entered into the AVC. This is the unadjusted AV. The Bronze Deductible plan then needs to be adjusted for the lower and separate prescription drug MOOP.
2. The HDHP model was used to develop the AV adjustments in a slightly different process than for the HDHPs.
 - a. Instead of normalizing the HDHP model to the AVC, the normalization factor for the Bronze HDHP was used.
 - b. The HDHP model cannot accommodate plan designs where both medical and drug claims do not accumulate to the deductible. Thus, the same plan design was entered into the HDHP model as in the AVC but the model selection indicated that both medical and drug claims accumulated to the deductible amounts.
 - c. The HDHP model was then re-run with the lower drug MOOP and to adjust the prescription drug MOOP to only consider prescription drug claims (the medical MOOP amount continues to use both medical and prescription drug claims). The model continued to use a stacked application for deductible and MOOP since it is a traditional deductible plan.
3. The final AV is the ratio of the AV from 2c and 2b applied to the AV from the AVC in 1.

Appendix H includes screen shots from the AVC and the HDHP model for each plan design with an adjusted actuarial value. Also included is a summary of the AVs and in the instance of the Bronze Deductible plan, a calculation of the adjustment.

RELIANCES

We have relied on others for information used in the actuarial value adjustments. For the original AV, the final 2016 federal AVC model was relied on. While reasonability tests have shown some errors in the calculations and there are some assumptions and methodologies that are not consistent with expectations, the AVC was developed for plan classification and not pricing. Thus, the model is being used as such and we make no warranties for the accuracy of the AVs that result from the AVC.

VHCURES data supplied by the state was used in the development of the HDHP model. We have reviewed the data for reasonableness, but have not performed any independent audit or otherwise verified the accuracy of the data/information.

DISCLOSURES AND LIMITATIONS

Wakely is financially and organizationally independent from the State of Vermont and any issuer in the state.

Wakely does not warrant or guarantee that actual experience will tie to the AV estimated for the placement of plan designs into tiers. The developed actuarial values are for the purposes of classifying plan designs of similar value and do not represent the expected actuarial value of a plan. Actual AVs will vary based on a plan's specific population, utilization, unit cost and other variables.

The distribution of this report to other users is limited to the State of Vermont and issuers within that state that will be submitting standard plan designs. Distribution to such parties should be made in its entirety. Distribution to other parties should only be made with Wakely's consent.

Exhibit A contains the formal actuarial certification. If you have any questions regarding this letter or the certification, please contact me.

Sincerely,

Julie A. Peper, FSA, MAAA
Director and Senior Consulting Actuary

APPENDIX A

Actuarial Certification State of Vermont Actuarial Value of Standard Plan Designs Effective January 1, 2016

I, Julie A. Peper, am associated with the firm of Wakely Consulting Group, Inc. (Wakely), am a Fellow of the Society of Actuaries and a member of the American Academy of Actuaries, and meet its Qualification Standards for Statements of Actuarial Opinion. Wakely was retained by the State of Vermont to provide a certification of the actuarial value of the state's standard plan designs that are effective January 1, 2016 on Vermont Health Connect. This certification may not be appropriate for other purposes.

To the best of my information, knowledge and belief, the actuarial values provided with this certification are considered actuarially sound for purposes of § 156.135(b), according to the following criteria:

- The final 2016 federal Actuarial Value Calculator was used to determine the AV for the plan provisions that fit within the calculator parameters;
- Appropriate adjustments were calculated, to the AV identified by the calculator, for plan design features that deviate substantially from the parameters of the AV calculator;
- The actuarial values have been developed in accordance with generally accepted actuarial principles and practices; and
- The actuarial values meet the requirements of § 156.135(b).

The assumptions and methodology used to development the actuarial values have been documented in my correspondence with the State of Vermont. The actuarial values associated with this certification are for standard plan designs (Silver HDHP, Bronze HDHP, Bronze Deductible, Silver HDHP CSR 73%, Silver HDHP CSR 77%, Silver HDHP CSR 79%, Silver HDHP CSR 83%, Silver HDHP CSR 87% and Silver HDHP CSR 94%) that will be effective as of January 1, 2016 on Vermont Health Connect.

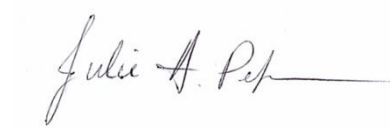

The developed actuarial values are for the purposes of classifying plan designs of similar value and do not represent the expected actuarial value of a plan. Actual AVs will vary based on a plan's specific population, utilization, unit cost and other variables.

In developing the actuarial values, I have relied upon the federal Actuarial Value calculator and data from the Vermont Healthcare Claims Uniform Reporting and Evaluation System (VHCURES). I did not audit the data provided; however, I did review the data for reasonableness and consistency.

March 23, 2015

Page 10

Actuarial methods, considerations, and analyses used in forming my opinion conform to the appropriate Standards of Practice as promulgated from time-to-time by the Actuarial Standards Board, whose standards form the basis of this Statement of Opinion.

A handwritten signature in cursive script that reads "Julie A. Peper". The signature is written in black ink on a light-colored background.

APPENDIX B

Summary of Plan Design Changes from 2015 designs

Deductible Plans				
Plan	Platinum	Gold	Silver	Bronze
Changes	No Change	No Change	Increase Medical Deductible from \$1,900 to \$2,000	Increase Medical Deductible from \$3,500 to \$4,000
			Increase Rx Deductible from \$100 to \$150	Increase Rx Deductible from \$300 to \$500
			Increase Medical MOOP from \$5,100 to \$5,600	Increase Medical MOOP from \$6,350 to \$6,850
			Increase Specialist office visit copay from \$45 to \$50	Increase Specialist office visit copay from \$80 to \$85
			Increase Rx Generic copay from \$12 to \$15	
			Increase Rx Preferred Brand copay from \$50 to \$60	
Cost Sharing Reduction Plan Designs - Deductible Plans				
Plan	250-300% FPL (73% AV)	200-250% FPL (77% AV)	150-200% FPL (87% AV)	133-150% FPL (94% AV)
Changes	Increase Medical Deductible from \$1,900 to \$2,000	Increase Medical Deductible from \$1,500 to \$1,600	No Change	No Change
	Increase Rx Deductible from \$100 to \$150	Increase Rx Deductible from \$100 to \$150		
	Increase Medical MOOP from \$4,000 to \$4,500	Increase Medical MOOP from \$3,000 to \$3,400		
	Increase Specialist office visit copay from \$45 to \$50	Increase Rx Preferred Brand copay from \$50 to \$60		
	Increase Rx Preferred Brand copay from \$50 to \$60			
HDHPs - Embedded MOOP				
Plan	Silver	Bronze		
Changes	Reduce Medical Deductible from \$1,500 to \$1,425	Increase Medical Deductible from \$2,000 to \$4,100		
	Aggregate family Medical MOOP has embedded \$6,850 individual maximum	Increase Medical MOOP from \$6,250 to \$6,500		
	Increase General Coinsurance from 20% to 25%	Aggregate family Medical MOOP has embedded \$6,850 individual maximum		
Cost Sharing Reduction Plan Designs - HDHPs Embedded MOOP				
Plan	250-300% FPL (73% AV)	200-250% FPL (77% AV)	150-200% FPL (87% AV)	133-150% FPL (94% AV)
Changes	Increase Medical Deductible from \$1,400 to \$1,425	Increase Medical MOOP from \$2,500 to \$2,700	Increase Medical Deductible from \$1,000 to \$1,150	Increase Medical Deductible from \$450 to \$500
	Increase Medical MOOP from \$3,400 to \$3,800	Increase General Coinsurance to 25% from 20%	Increase Medical MOOP from \$1,000 to \$1,150	Increase Medical MOOP from \$450 to \$500
	Aggregate family Medical MOOP has embedded \$6,850 individual maximum	Increase Rx Generic copay from \$5 to \$10		
	Increase General Coinsurance to 25% from 20%	Increase Rx Preferred Brand copay from \$30 to \$40		
HDHPs - Stacked MOOP				
Plan	Silver	Bronze		
Changes	Family Medical MOOP is stacked instead of aggregate	Increase Medical Deductible from \$2,000 to \$4,400		
	Increase General Coinsurance from 20% to 25%	Increase Medical MOOP from \$6,250 to \$6,500		
		Family Medical MOOP is stacked instead of aggregate		
Cost Sharing Reduction Plan Designs - HDHPs Stacked MOOP				
Plan	250-300% FPL (73% AV)	200-250% FPL (77% AV)	150-200% FPL (87% AV)	133-150% FPL (94% AV)
Changes	Increase Medical Deductible from \$1,400 to \$1,550	Increase Medical Deductible from \$1,300 to \$1,400	Increase Medical Deductible from \$1,000 to \$1,200	Increase Medical Deductible from \$450 to \$500
	Increase Medical MOOP from \$3,400 to \$4,250	Increase Medical MOOP from \$2,500 to \$3,100	Increase Medical MOOP from \$1,000 to \$1,200	Increase Medical MOOP from \$450 to \$500

APPENDIX D

Comments Relative to Applicable ASOPs

This appendix includes comments relative to the following applicable Actuarial Standards of Practice (ASOP).

- ASOP No. 23, *Data Quality*;
- ASOP No. 25, *Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverages*; and
- ASOP No. 41, *Actuarial Communications*.

ASOP 23: Data Quality

3.1 Overview – VHCURES data was used as the basis for the HDHP model and this data source was deemed reasonable for the analysis discussed in the management report.

3.2 Selection of Data - The data was considered reasonable for our analysis subject to the following considerations -

- a. The data sources contained all material data elements.
- b. The following considerations were reviewed as part of our analysis:
 1. Data was appropriate and sufficiently current. The data was for similar/same populations and the most applicable data set available.
 2. Data was reasonable and comprehensive of the necessary data elements.
 3. There were no known, material limitations of the data.
 4. No alternative data sets were reasonably available. The reliability of the data underlying our analysis did not require support from alternative data sets.
 5. Alternative data sets were not deemed necessary to complete the analysis.
 6. Sampling methods were not required.

3.3 Reliance on Data Supplied by Others - Reliance is discussed in the management report to which this appendix is attached.

3.4 Reliance on Other Information Relevant to the Use of Data - We relied on information contained in the report. We did not detect any material errors in the data provided and relied upon the data as part of our analysis.

3.5 Review of Data - We reviewed the data. Data definitions were included as part of the VHCURES data. Ultimately the data was reasonable with the adjustments discussed in our management report.

3.6 Limitation of the Actuary's Responsibility - We did not audit the data.

3.7 Use of Data– Use and adjustments to the data are discussed in this management report. In addition:

- a. We deem that the data are of sufficient quality to perform the analysis;
- b. The data did not require enhancement before the analysis could be performed
- c. The data was reasonable for the analysis and did not require adjustment beyond that discussed in the management report;
- d. We did not detect any material defects in any data source;
- e. The data were adequate to perform our analysis.

ASOP 25: Credibility Procedures

The HDHP model uses data as its starting point. The experience used is fully credible and therefore no credibility blending or adjustments were necessary.

ASOP 41: Actuarial Communications

This report and the actuarial memorandum submitted are consistent with the guidance in ASOP 41.

3.1 General Requirements for Actuarial Communications

3.1.1 Principal and Scope of Engagement – These results were developed to comply with § 156.135(b) and should not be used for any other purpose. The distribution of this report to other users is limited to the State of Vermont.

3.1.2 Form and Content – The State of Vermont was the principal for this engagement and the scope of the engagement included developing and certifying the actuarial values for the standard plan designs as discussed in the management report.

3.1.3 Timing of Communication – This report is provided in conjunction with the actuarial certification of the submitted actuarial values.

3.1.4 Identification of Responsible Actuary – The responsible actuary is identified in the attestation and this management report.

3.2 Actuarial Report – This management report is an Actuarial Report as defined in this ASOP. Correspondence between Wakely and the State of Vermont as part of this engagement should also be considered part of the Actuarial Report.

3.3 Specific Circumstances – No constraints apply beyond any discussed in the attachment management report.

3.4 Disclosures Within an Actuarial Report - all relevant disclosures have been made in the management report. Consistent with this ASOP, we make specific mention to the following items here:

3.4.1 Uncertainty or Risk – Uncertainty is discussed in the management report.

3.4.2 Conflict of Interest – Wakely is financially, organizationally, and otherwise independent from the State of Vermont and any reliant parties.

3.4.3 Reliance on Other Sources for Data and Other Information - Reliance regarding data and assumptions are discussed in this management report.

3.4.4 Responsibility for Assumptions and Methods - Assumptions and methods are discussed in the management report and the parties associated with the assumptions and methods have been delineated. Therefore, pursuant to this ASOP, no additional disclosure is necessary.

3.4.5 Information Date of Report -The management report list the applicable dates for the analysis and correspondence.

3.4.6 Subsequent Events - There are no subsequent events, as of the date of this report that would materially affect the results presented herein.

3.5 Explanation of Material Differences - Wakely has issued no other report regarding the development of these actuarial values. No comparison to prior results is necessary.

3.6 Oral Communications - No oral communication is considered part of this actuarial report. Any material assumptions or methods discussed in oral communications have been documented in written form as well.

3.7 Responsibility to Other Users - Intended users of this report have been specifically noted in the document.

APPENDIX E

Standard Plan Designs –Deductible Plans

Deductible/OOP Max	Deductible Plans			
	Platinum Same as 2015 Plan Design	Gold Same as 2015 Plan Design	Silver 2016 Proposed Design	Bronze 2016 Proposed Design

APPENDIX F

Class I Pediatric Dental Codes

These procedures are diagnostic and preventive in nature. Under the definition of what is essential they may have limits. The services and limits are described in the Department of Vermont Health Access, Dental Procedure/Fee Schedule (Effective for services provided on or after 11/01/2013)

D0120 Periodic Oral Evaluation

D0140 Limited Oral Evaluation – Problem Focused

D0145 Oral Evaluation for a patient under three years of age and counseling with primary caregiver

D0150 Comprehensive Oral Evaluation

D0170 Re-evaluation – Limited, Problem Focused

D0210 Intraoral Radiographs– Complete Series (including bitewings)

D0220 Intraoral Radiographs – Periapical – First Film

D0230 Intraoral Radiographs– Periapical – Each Additional Film

D0240 Intraoral – Occlusal Film

D0250 Extraoral – First Film

D0260 Extraoral – Each Additional Film

D0270 Bitewing – Single Film

D0272 Bitewings – 2 Films

D0273 Bitewings – 3 Films

D0274 Bitewings – 4 Films

D0330 Panoramic Film

D0340 Cephalometric Film

D0350 Oral/Facial Photographic Images

D0364 Cone Beam CT Capture and Interpretation with Limited Field of View - Less Than One Whole Jaw

D0365 Cone Beam CT Capture and Interpretation with Limited Field of View of One Full Dental Arch - Mandible

D0366 Cone Beam CT Capture and Interpretation with Limited Field of View of One Full Dental Arch - Maxilla, with or without Cranium

D0367 Cone Beam CT Capture and Interpretation with Limited Field of View of Both Jaws, With or Without Cranium

D0368 Cone Beam CT Capture and Interpretation for TMJ Series Including Two or More Exposures

D0391 Interpretation of Diagnostic Image by a Practitioner Not Associated with Capture of the Image, Including the Report

D0470 Diagnostic Models

D1120 Prophylaxis – Child

D1208 Topical Application of Fluoride

D1330 Oral Hygiene Instructions

D1351 Sealant – Per Tooth

D1351 U9 Sealant – Per Tooth-Deciduous second molars and bicuspid*

D1352 Preventive resin restoration in a moderate to high caries risk patient -permanent tooth

D1510 Space Maintainer - Fixed – Unilateral

D1515 Space Maintainer – Fixed – Bilateral

D1525 Space Maintainer – Removable – Bilateral

D1550 Recementation of Space Maintainer

Services subject to deductible (DD) unless otherwise stated.

** 3 PCP Office Visits are covered in full, not subject to deductible

[^] Services provided by a tribal facility are covered in full for non-HDHP plans. For HDHP plans, services are covered in full if provided by a tribal facility after the deductible is met.

Generic Drugs are Covered in full up to age 10, after Pharmacy deductible is met

Note: MVP's Non-Standard Plan Designs also have a Member Wellness Rider (Form: FRVT-301) attached which provides up to \$50 per adult member (age >= 18) per year.

ACTUARIAL MEMORANDUM

2016 Vermont Exchange Filing

Purpose and Scope of Filing

This memorandum details the methods and assumptions underlying the proposed 2016 premium rates for the State of Vermont's Individual and SHOP Exchange. These products will be issued by MVP Health Plan, Inc., a non-profit subsidiary of MVP Health Care, Inc. The rate filing has been prepared to satisfy the requirements of 8 V.S.A §5104 as well as the requirements of the Federal ACA including 45 CFR Part 156, §156.80. The premium rates are effective between 1/1/2016 and 12/31/2016. This filing includes a new product that will be offered for the first time. The rate for this new product was developed consistent with the proposed renewal rates for the current products. MVP made uniform modifications to a number of the benefits being offered, and the updated forms have been submitted in a separate SERFF filing. The proposed rates reflect an average rate adjustment to prior rates of 3.0%, ranging from -1.8% to 27.3%. The 27.3% proposed increase is for the catastrophic plan, and the increase is driven by the demographics of the eligible population relative to the book of business average demographic factor. The largest increase proposed outside of this plan is 4.2%.

Drivers of Rate Increase

The proposed premium rates reflect an increase over the prior rates due to medical inflation and experience period data not reflecting a full 12-month contract. Premium rate increases are varying by plan due to uniform benefit modifications of a number of benefits being offered as well as the impact of fixed PMPM non-claim costs on premiums that vary based on benefit level.

Market/Benefits

All products and rates included in this rate filing are available to both individuals and small employer groups. All Essential Health Benefits (EHBs) are covered. Only one EHB substitution was made as required by the Department of VHA, a substitution for the \$2,000 annual Private Duty Nursing benefit limit in the benchmark plan. MVP contracted Milliman to determine an actuarially equivalent visit limit. The supporting memorandum is included with the documents supplementing this filing. The non-standard products proposed by MVP and included in this rate filing include a wellness benefit in excess of the EHBs. This wellness benefit is included in all non-standard products and is filed as a mandatory rider, Form: FRVT-301.

To inform consumers of the availability and details of the products included in this filing, MVP will provide community outreach support as well as offer web and print product content and other printed product materials for VT plans. MVP will also have a mass media presence to further educate health care customers in Vermont.

The book of business affected by this rate filing reflects 3,324 policyholders, 4,227 subscribers and 6,417 members.

Experience Period Premium and Claims (Worksheet 1, Section 1 of Unified Rate Review Template)

Worksheet 1, Section 1 of the Unified Rate Review Template contains MVP Health Plan, Inc. Small Group and Individual HMO Data for Vermont members over the time period 1/1/2014 – 12/31/2014, completed through 3/31/2015. This data reflects both ACA compliant membership and non-ACA compliant membership. Of the 60,497 Member Months reflected in this section of the URRT, 60,156 of the Member Months were enrolled in ACA compliant plans.

MVP's does not project to rebate consumers for 2014 dates of service, and therefore no adjustments were made to the earned premium amount reflected on Worksheet 1, Section 1 of the Unified Rate Review Template. The earned premium shown reflects the amount of premium MVP collected from groups and individuals over the experience period.

Allowed claim data includes claims from our fee for service (FFS) claim warehouse along with additional medical expenses not captured in the claim warehouse such as: payments associated with medical home, physician incentive payments, FFS write-offs and net reinsurance expenses.

An allowance for incurred but not reported paid claims (IBNR) was added to the experience period fee-for-service (FFS) medical claims. IBNR files were supplied directly from MVP’s reserving actuary. MVP uses a combination PMPM and completion factor method to develop IBNR estimates, and Vermont specific data for the experience period was used to develop the factors. The fee-for-service experience period claims were reconciled with the IBNR lag triangles to ensure accuracy.

A summary of experience period claims processed through MVP’s claim system, experience period costs not processed through MVP’s claims system, as well as an estimate of IBNR are summarized below for the claims shown in Worksheet I, Section I of the URRT.

	Allowed	Incurred
Claims Processed Through Claim System	\$22,878,874	\$17,723,578
Experience Period Costs Not Processed Through Claims System	\$805,446	\$738,717
IBNR	\$683,540	\$530,016
Total	\$24,367,859	\$18,992,311

Benefit Categories (Worksheet 1, Section 2 of Unified Rate Review Template)

MVP determines benefit category based on the type of claim form submitted in conjunction with the code and type of code attached to the claim form (i.e. ICD-9, Diagnosis Code, or HCPCS). Member encounter data is used to determine utilization for claims falling under the “Other” category.

Projection Factors (Worksheet 1, Section 2 of Unified Rate Review Template)

Adjustments to Meet EHB Requirements

Benefits Added

Several new covered benefits need to be accounted for in Non-ACA compliant plans which include: pediatric dental, pediatric vision, disposable medical supplies, wigs, sterilization reversal, couples therapy, private duty nursing and removing limitations for SNF and Home Care.

Pediatric vision, disposable medical supplies, and pediatric dental claims were captured in MVP’s ACA compliant 2014 data, and MVP has assumed that non-ACA compliant members will incur claims at the same rate in 2016. For the other benefits being added, MVP was not able to separate these specific costs from our ACA compliant data. MVP contracted with Milliman to quantify these benefit costs. An actuarial memorandum provided by Milliman which outlines the derivation of these costs has been included with this SERFF filing.

For non-ACA compliant plans, pharmacy coverage was not a mandated benefit. There were 1,289 MM included in MVP’s non-ACA compliant small group pool of data that did not have Rx coverage in the experience period. MVP assumed that these members would incur costs at the average cost of the non-ACA Compliant Small Group members with pharmacy coverage in in the experience period.

Benefits Removed

Non-ACA compliant data includes benefits that are not covered in MVP’s ACA compliant plans either as a standard covered benefit or via an optional rider. These benefits include: elective abortion and vision exams/hardware. The cost of these benefits was removed from the Non-ACA compliant data in the experience period.

Adjustment for Expected Covered Membership Risk Characteristics

MVP is applying a 2.0% morbidity improvement factor to its projection of non-ACA compliant experience period data. This adjustment is consistent with the GMCB's decision and order from MVP's 2014 Exchange filing, and MVP kept this adjustment in its 2015 rate filing as well.

Adjustment for Leap Year in 2016

MVP's experience period data is 2014 incurred claims. Because the projection period is 2016, an adjustment for the leap year is being made in line 20 of Exhibit 3. The adjustment is equal to 366/365 and reflects an additional day of claims in 2016 that was not reflected in the experience period.

Medical Trend Factors

The assumed unit cost trends reflect known and assumed price increases from MVP's provider network. Consistent with recently submitted filings, MVP is applying 0% utilization trend to its data. Regression analysis has been performed on MVP's utilization data in the past, and it was concluded that the predictive ability of the historical utilization trends was weak and not reliable.

Rx Trend Factors

Annual allowed Rx trend factors were supplied by MVP's pharmacy benefit manager (PBM) and reflect their best estimate of expected changes to pharmacy costs and drug utilization. The trend forecast provided by MVP's PBM accounts for drugs coming off patent, changes in average wholesale price, new drugs being released to the market, and price competitiveness amongst generic and brand drug manufacturers. The average annual allowed Rx trend is 10.6%.

Credibility Manual Rate Development (Worksheet 1, Section 2 of Unified Rate Review Template)

MVP Health Plan, Inc. and MVP Health Insurance Co. historical claim data was the basis of the premium rate development. Non-ACA compliant and ACA compliant individual and small employer group data, association data, and large employer groups with 51-100 employees are included in the experience period data set used to develop premium rates. MVP combined the experience of these separate pools of data to form a more credible experience base. In aggregate, the claim data is assumed to be fully credible. The experience period data complies with the single risk pool requirement of the Federal ACA.

Because MVP's experience period membership shown in Worksheet 1, Section 1 does not fully reflect this population, the claims not reflected in that section which are being used in MVP's premium rate development are reflected in the credibility manual.

MVP determined the credibility weights between the two sections of URRT data based on the membership enrolled in each of these populations over the experience period.

A portion of the index rate claims are covered under a capitation arrangement. The cost associated with these claims reflects the PMPM payment MVP will owe its capitated vendors in 2016.

Paid-to-Allowed Ratio and Membership Projection (Worksheet 1, Section 3 & Worksheet 2, Section 4 of Unified Rate Review Template)

MVP projects an 81.0% paid-to-allowed ratio in 2016 and assumes the projection period membership will equal the experience period membership used to develop premium rates, or 179,944 Member Months. MVP assumed ACA compliant members would remain in the same product in 2016 as they purchased in 2014. For non-ACA compliant

members, MVP reviewed 2014 enrollment by actuarial value and mapped members to a metal level. From there, MVP assumed a uniform distribution of membership by plan within each metal level.

Because this is a merged market, MVP had to make assumptions regarding whether members in non-ACA compliant plans would purchase individual coverage or small group coverage in 2016. MVP assumed that all members enrolled in the Agriservices Association and Individual Indemnity products during the experience period would purchase Individual coverage. MVP's assumption for Agriservices was based on conversations with MVP's internal sales team. For non-ACA compliant Small Group members, MVP assumed the same percentage of individual enrollment as was reflected in the 2014 ACA compliant products. For Large Group 51-100, MVP assumed all members would enroll in Small Group.

After mapping members to products in the projection period, MVP then computed the weighted average projected claim expense PMPM. The resulting PMPM was compared the projection period Allowed Experience Period Claims PMPM to derive the paid to allowed ratio for 2016.

Impact of 3 R's on Claim Projection

Transitional Reinsurance Program

MVP is assuming that the assumed reinsurance recovery for individual members in 2016 will equal 4.2%. This was determined by computing 50% of the annual average value of claims between \$90,000 - \$250,000 for members in the VT single risk pool between 2012 and 2014. Please see below for the percentage by year:

Time Period	% of Claims Subject to 2016 TRP Recoveries
2012	4.1%
2013	4.8%
2014	3.7%
Average	4.2%

To arrive at the PMPM value of the Temporary Reinsurance Program in 2016 the projected incurred claims PMPM for the individual market is being multiplied by -4.2%.

Federal Risk Adjustment Program

No adjustment is being made to the paid index rate for the Federal Risk Adjustment this program. There was no market simulation completed by the State of Vermont and therefore there is no basis for assuming anything other than a \$0 payment transfer between carriers.

Federal Risk Corridor Program

No adjustment is being to the paid index rate to account for this program.

Index Rate and Premium Rate Development

The experience period index rate of \$403 is equal to AR44 small group and individual HMO allowed claim data for the time period, 1/1/2014 – 12/31/2014, completed through 3/31/2015. The single risk pool projection period index rate is \$462.54. These amounts reflect the cost of EHBs over the applicable time periods. The projection period index rate reflects all market-wide adjustments discussed above in the section labeled, "Projection Factors".

In the experience period, the value of non-EHBs for members enrolled in non-ACA compliant plans did not have an impact on the index rate; this was driven by the fact that 99.4% of experience period members in Section 1 of Worksheet 1 were enrolled in ACA compliant plans. For the projection period, MVP projects a cost of \$0.02 PMPM

for non-EHBs. This amount was calculated by taking the member weighted average projected enrollment in non-standard plans times the cost of non-EHBs (\$0.07 PMPM) divided by the total projected membership for 2016.

The market adjusted index rate for the projection period equals \$451.40. This value was computed by adjusting the projection period index rate for the federal reinsurance program, risk adjustment, and marketplace user fees. Please see above for details on the computation of the projected value of the temporary reinsurance program and risk adjustment program. The market adjusted index rate reflects the average demographic characteristics of the single risk pool.

Plan Adjusted Index PMPM rates

Plan adjusted index rates are calculated by multiplying the market adjusted index rate times the AV pricing value. The AV pricing value reflects the impact of benefit value, induced utilization, benefits in addition to EHBs, the catastrophic plan adjustment, and the value of non-claim expenses. Please see below for details regarding actuarial values, induced utilization, and non-claim expenses reflected in 2016 premium rates.

Note the AV pricing value does not reflect the expected actuarial value of benefits being offered. Because the market adjusted index rate does not reflect the impact of administrative costs and the AV pricing value accounts for these costs, many of the AV pricing values seen on Worksheet 2 are greater than 1.00.

Actuarial Values and Induced Utilization Factors

The AV Metal Level for each plan was determined using the Federal prescribed Actuarial Value Calculator. Adjustments for aggregate deductibles, the VT Rx OOPM, and safe harbor prescription Rx benefits were made to the calculator results for the non-standard gold HDHP and non-standard bronze HMO plans. The actuarial certification of these adjustments has been included.

The Benefit Actuarial Value for each plan was determined using MVP's in house benefit pricing tools. The pricing tools value the expected net paid claim cost associated with unique benefit plan designs from a starting single risk pool allowed amount. The AV is the ratio of the expected paid to allowed amount for each plan design. MVP did not reflect any induced utilization in the projection of the net paid amounts for each unique benefit plan.

The induced utilization factors used to set premium rates and compute the average inforce induced utilization factor are sloped to comply with the HHS prescribed induced utilization factors of 1.00 for Bronze, 1.03 for Silver, 1.08 for Gold, and 1.15 for Platinum.

Non Claim Expense Plan Level Adjustments

Non claim expenses include both percent of premium loads and PMPM loads. The loads do not vary by plan. Each Standard and Non Standard plan is being loaded with the same PMPM and Percent of Premium loads.

Federal Taxes PMPM based

A total of \$2.57 PMPM is added for fees MVP must pay to the Federal Government per ACA regulations on a PMPM basis and includes the following 3 taxes: \$2.25 reinsurance contribution rate, \$0.15 HHS risk adjustment user fee and \$0.17 Patient Centered Outcome Research Fee.

Federal Taxes Premium based

This is referred to as the ACA Insurer Tax and will be assessed as a premium based tax applicable to all health insurance carriers. The fee collected by HHS will vary each year beginning with \$8 billion in 2014, \$11.3 billion in 2015 and 2016, \$13.9 billion in 2017 and \$14.3 billion in 2018. MVP is assuming 2% of premium will be paid to fund this tax for 2016. This is unchanged from 2015.

State Taxes Premium based – VT Vaccine Assessment

This load reflects a Vermont state assessment based on plan premiums used to fund immunizations provided by the state. The load of 0.6% is based on MVP's current charge for this program.

General Administrative Expense Load (Including QI component)

The total administrative expense load included as a plan level adjustment is equal to \$36.60 PMPM. MVP previously filed administrative expenses as a percentage of premium but has decided to modify this methodology in 2016. This amount includes \$1.50 PMPM to provide an expanded network to members purchasing exchange products in VT through a partnership with PHCS. The remaining \$35.10 PMPM is used to cover SG&A expenses as well as Quality Improvement/Cost Containment Programs (QI). Based on an analysis of MVP's 2014 expenses, 9% of MVP's total administrative expense was spent on QI. Therefore, \$3.16 PMPM of the \$35.10 PMPM administrative expense is attributable to QI.

MVP is currently working towards improving administrative efficiencies to reduce its operating expenses in 2016. The following table summarizes the administrative expenses for small group and individual lines of business from the 2012, 2013, and 2014 Statutory Supplemental Health Care Exhibits (SHCE). The actual 2014 filing will not match the numbers below exactly as there was an internal allocation error when completing the SHCEs. Temporary reinsurance pool fees were not properly allocated by group size within each company in the filed SHCEs which has been reconciled in the table below.

Combined VT AR42 and AR44	Year	SHCE Admin PMPM*
Individual	2012	\$57.27
Small Group	2012	\$37.24
Combined	2012	\$39.98
Individual	2013	\$38.96
Small Group	2013	\$46.56
Combined	2013	\$45.58
Individual	2014	\$44.26
Small Group	2014	\$38.11
Combined	2014	\$40.30

**Reflects lines 6.6, 8.3, 10.1, and 10.4 of SHCE, Part 1*

Profit/Risk Charge

MVP is not building a profit/risk charge into the VT Exchange premium rates for 2016. MVP understands the necessity of building a risk charge into premium rates to protect against adverse experience relative to pricing assumptions, but we are willing to temporarily remove this charge to aid in our competitive position in this market.

Bad Debt Expense

A plan level adjustment equal to 0.40% of premium was added to account for non-payment of premium risk. MVP has experienced an increase in bad debt in the VT Individual Exchange which is the driver of this increase.

Rider FRVT-301 (Wellness Benefit in Addition to EHBs)

Members purchasing a non-standard plan will receive MVP's Member Wellness Incentive (Form: FRVT-301). This benefit provides adult members with up to \$50 per year in incentives. MVP projects the net cost of this benefit to equal \$0.07 PMPM. This figure was derived by analyzing the cost of Rider VT-301 for 2014 dates of service relative to the non-Standard population receiving this benefit. The incentive for this benefit in 2014 was \$200 and had a cost of \$0.28 PMPM. Because the reimbursement is being reduced to \$50, MVP divided the \$0.28 PMPM amount by 4 to

reflect the 2016 reimbursement of \$50 per year. This additional cost was added as a plan level adjustment to the non-Standard plans.

Catastrophic Plan Adjustment

An additional plan level adjustment was applied to the catastrophic plan to account for the unique age eligibility requirements as permitted by the Federal ACA Rules. MVP did not reflect the fact that individuals facing financial hardship could also qualify to enroll in this plan. As of March 2015, all of the 149 members enrolled in this plan meet the age qualification for enrollment (< 30 years old).

MVP determined the adjustment factor for this plan by calculating the HHS Age factor for the eligible population and comparing it to the HHS Age factor of the experience period membership. The eligible population was assumed to be any member under the age of 30 that was not attached to a subscriber age 30 or older. It was assumed that a member under the age of 30 and attached to a subscriber age 30 or older would enroll as a dependent in a non-catastrophic plan. The eligibility adjustment factor is equal to 0.656.

Catastrophic Plan Level Adjustment	
	HHS Age Factor
Ages 0-29, Meeting Subscriber Qualifications	1.038
Single Risk Pool Total	1.583
Catastrophic Adjustment	0.656

Loss Ratio Information

The traditional target loss ratio (claims cost / premium) for the rates proposed in this rate filing is 87.7%. After making adjustments for taxes/assessments and expenses associated with quality improvements, the Federal target loss ratio for the rates proposed in this filing is 91.3%. Please see the table below for more detail:

Target Loss Ratio for 2016 VT Exchange	
A) Claims Expense (line 34, Exh 3)	\$367.51
B) Taxes/Assessments	\$13.47
C) Quality Improvement	\$3.16
D) Premium	\$419.26
E) Traditional Loss Ratio = A) / D)	87.7%
F) Federal Loss Ratio = [A) + C)] / [D) - B)]	91.3%

Terminated Products

Included in the terminated products information of Worksheet 2 is Small Group non-ACA compliant HMO plans. The following is a list of the HIOS Product IDs reflected in Worksheet 2: 77556VT001, 77556VT002, 77556VT004.

Warning Alerts

There are no Warning Alerts being generated.

Actuarial Certification

I, Matthew Lombardo, am a Member of the American Academy of Actuaries. The projected Index Rate and Adjusted Paid Amount used in the development of these proposed premium rates is in compliance with all applicable State and

Federal Statutes and Regulations (45 CFR 156.80(d)(1)) and developed in compliance with the applicable Actuarial Standards of Practice. I have examined the assumptions and methods used in determining MVP's requested rates. Based on my review and examination, it is my opinion that the proposed premium rates are reasonable in relation to the benefits provided and that they are not excessive, nor inadequate, nor unfairly discriminatory. They are developed using only the permitted rating classifications. The Adjusted Paid Amount and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates. The Standard AV Calculator was used to determine the Metal AV Value to be show in Worksheet 2 of the Part I Unified Rate Review template for all the plans. The EHB portion of premium reflected in Worksheet 2, Sections 3 and 4 was calculated in accordance with actuarial standards of practice.

The URRT does not demonstrate the process that was used to develop premium rates. Rather it represents information required by Federal regulation to be provided in support of the review of rate increases and for certification that the Index rate is developed in accordance with Federal regulation and used consistently and only adjusted by the allowable modifiers.

I certify that I am knowledgeable as to the Vermont laws and regulations that apply to this filing and that, to the best of my knowledge and belief, this filing is in compliance with such laws and regulations and provides all required benefits.

I am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the PPACA and the HCERA of 2010.

I certify that each rate filing has been prepared in accordance with the following; ASOP#5, ASOP#8, ASOP#12, ASOP#23, ASOP#25, ASOP#26, and ASOP#41.

Consumer Disclosure about Proposed Health Insurance Rate Increase VT 2016 ACA Exchange Rate Filing

MVP Health Plan, Inc. is a health care payer operating in Vermont and New York. MVP's mission is to provide high quality and affordable health care with a focus on wellness to our members.

MVP must obtain approval from the Green Mountain Care Board for the health insurance premium rates charged. MVP files annual premium rates for the Exchange which are guaranteed for 12 months. This rate filing seeks approval of MVP's 2016 Exchange rates (effective dates of coverage beginning between January 1, 2016 and December 31, 2016).

The premium rates filed reflect MVP's current estimate of the cost to provide health insurance for that coverage period. The filed premium rates may be higher or lower than the previously filed premium rates; however, premium rates generally increase over time. Increases in premium rates are driven by many factors including increases in use of medical services by the insured population, increases in hospital and physician required charges for medical care, expanded covered services due to government mandates, fees and assessments charged by the government to insurers, and the exit of healthier individuals from the insurance market place as the cost of insurance increases.

The proposed rates reflect an average rate adjustment to prior rates of 3.0%, ranging from -1.8% to 27.3%. The 27.3% proposed increase is for the catastrophic plan, and the increase is driven by the demographics of the eligible population relative to the book of business average demographic factor. The largest increase proposed outside of the catastrophic plan is 4.2%. There are 3,324 policyholders, 4,227 subscribers and 6,417 members impacted by this rate filing.

Certification of Compliance

I hereby certify that I have reviewed the applicable filing requirements for this filing and the filing complies with all applicable statutory and regulatory provisions for the state of Vermont.

Re: 2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Ms. Lee:

This letter is in response to your correspondence received 05/28/15 regarding the above mentioned rate filing. The verbal responses to your questions are provided below and any numerical examples are included in the attached excel workbook with tabs corresponding to each numbered question.

1. For the ACA compliant plans, please provide individual 36 month history of medical claims and Rx claims split by drug category in a format similar to "Rolling 12 Medical and Rx Data.xls" provided in earlier filings and clearly illustrate normalized historic medical and Rx trends.

Response: Please see the attached excel file for the requested information.

2. Please provide quantitative support for the development of entries listed under "Benefits Added" and "Benefits Removed" in the table illustrated in page 5 of the Actuarial Memorandum. Where a mapping exists between these entries and Milliman's EHB support document dated March 18, 2013, please illustrate this mapping.

Response: Please see the attached excel file for the requested information.

3. How was the expansion of small group from 50 to 100 employees taken into account in rate setting for 2016? In doing so, please illustrate how Worksheet 1 of URRT reflects this expansion?

Response: Large group data with 51-100 employees is included in the development of index claim rate PMPM. In Exhibit 3 of the rate filing, these claims were shown separately in the column, "Non-ACA Compliant Large Group 51-100".

In the URRT, Worksheet 1, Section 1 reflects data for Small Group and Individual AR44 members over the experience period. The data shown in the credibility manual portion of Worksheet 1 reflects the data for members included in the index claim rate development that were not enrolled in Small Group or Individual AR44 products over the experience period. This data includes the Large Group 51-100 block. Please see the attached excel file for a summary of the credibility manual claims broken out by Large Group 51-100 vs. all other Non-AR44 Small/Individual claims.

4. Justify why you expect the population morbidity in 2016 to be unchanged from 2014.

625 State Street, PO Box 2207
Schenectady, NY 12301-2207
mvphealthcare.com

Response: MVP is assuming its 2016 membership projection is equal to its 2014 experience period membership as its competitive premium position was unknown at the time rates were submitted. The 2016 membership assumes the same age distribution as the experience period membership. As a result, MVP does not believe a population morbidity adjustment is required.

5. Provide quantitative support for the development of “Other” factors in Worksheet 1 of the URRT.

Response: Please see the attached excel file.

6. Provide quantitative support for the development of “Cost” and “Util” factors in Worksheet 1 of the URRT. In doing so, describe the methodology used in developing the cost and utilization factors, including all adjustments made to the data (normalization for age, benefit changes etc.).

Response: The cost and utilization trend factors shown in Worksheet 1 of the URRT for the FFS categories are the annualized trend figures that are shown in Exhibits 2a and 2b of the rate filing. The assumed FFS medical unit cost trends reflect known and assumed price increases from MVP’s provider network. The Rx trend factors were supplied by MVP’s pharmacy benefit manager (PBM) and reflect their best estimate of expected changes to pharmacy costs and drug utilization. The capitation trend in URRT Worksheet 1 reflects the annualized expected change in non-FFS costs from the experience period to the projection period. MVP did not make any adjustments to its trend figures for demographic shifts, benefit changes, etc.

Please see the attached excel file for a computation of the annualized medical FFS trends by service category. For a quantitative derivation of the annualized Rx trend figures, please see the rate filing exhibits quoted above.

7. Have any changes in costs related to demographics of the projected covered population versus the experience period been accounted for? Please justify your answer. Please provide the average age of the experience period enrollment and the projected covered population.

Response: MVP is assuming its 2016 membership projection is equal to its 2014 experience period membership as its competitive premium position was unknown at the time rates were submitted. The 2016 membership assumes the same age distribution as the experience period membership. The average age for both time periods is 39.6 years old.

8. What is MVP’s credibility formula resulting in 33.62% credibility to the experience period?

Response: The credibility assigned to the data in URRT Worksheet 1, Section 1 represents the percentage of experience period members enrolled in Small Group or Individual AR44 products relative to the total experience period membership. Please see below.

Small Group + Individual AR44 Membership	60,497
Total Experience Period Membership	179,944
Credibility Assigned to Worksheet 1, Section 1 Data	33.62%

625 State Street, PO Box 2207
Schenectady, NY 12301-2207
mvphealthcare.com

9. Describe the source and appropriateness of data used in developing the credibility manual rates. In your response, please include all adjustments made to the source data to reflect the population, region, provider network, and benefits anticipated in the projection period.

Response: The data shown in the credibility manual portion of Worksheet 1 reflects the data for members included in the index claim rate development that were not enrolled in Small Group or Individual AR44 products over the experience period. Please see the attached excel file for the requested information.

10. Provide support for the new \$1.50 PMPM administrative load to account for an expanded network to members purchasing exchange products in VT through a partnership with PHCS.

Response: MVP introduced the PHCS network to its HMO products in 2015 and this \$1.50 PMPM expense was included in MVP's 2015 Exchange filing. MVP pays PHCS a percentage of the discount received when members access out-of-network providers. \$1.50 PMPM reflects MVP's best estimate of this expense.

11. Reconcile the -\$9.20 PMPM in reinsurance recovery stated in page 9 of the memorandum with the -\$6.95 PMPM in the URRT and the -\$11.29 in the Actuarial Data Set?

Response: MVP projects temporary reinsurance pool (TRP) recoveries to equal \$9.20 PMPM in 2016 which is the figure quoted in the actuarial memorandum and can also be found in Exhibit 3 of the rate filing. The URRT instructs carriers to remove the TRP fee of \$2.25 PMPM from Worksheet 1 which is how MVP arrived at the amount shown in the URRT ($\$9.20 - \$2.25 = \$6.95$).

For the Actuarial Data Set, MVP calculated the projected TRP recovery as a function of the Projected Index Rate PMPM from the URRT which is on an allowed basis while the figures above are determined on a paid basis. The Market Adjusted Index Rate PMPM is defined as the EHB portion of allowed claims divided by all single risk pool lives, adjusted for Risk Adjustment, Reinsurance and Marketplace Fees. Therefore, any adjustments made to the allowed Index Rate in the Dataset should be made on an allowed basis. Please see the attached excel file for a quantitative derivation of this amount.

12. Was any independent study through 3rd party consultants conducted to analyze MVP's risk scores versus the average small group market?

Response: No independent 3rd party consultants conducted an analysis of relative risk scores for MVP's VT block of business.

13. Please confirm that the \$0.15 Exchange User Fee PMPM is accurate in the Actuarial Data Set. Explain why this is a positive adjustment in the Data Set and a negative adjustment in the URRT.

Response: For the URRT, carriers are instructed to input risk adjustment payments as negative values and receipts as positive values which is why MVP has a negative value shown in URRT Worksheet 1, Section 3 for the Exchange User Fee PMPM. To arrive at the "Projected incurred claims, net of reinsurance recoveries, net of rein prem, PMPM" in the URRT, the Exchange User Fee PMPM is subtracted from the Projected Incurred Claims PMPM which results in a

625 State Street, PO Box 2207
Schenectady, NY 12301-2207
mvphealthcare.com

\$0.15 PMPM addition to the projected incurred claim amount (URRT Worksheet 1, Section 3: $\$374.63 - (\$0.15) = \$374.63 + \$0.15 = \$374.78$). The Actuarial Data Set adds the cost of the Exchange User Fee to the Index Rate. As a result, MVP input a positive value for the Exchange User Fee PMPM so the resulting calculation is consistent with the URRT.

14. Exhibit 4 illustrates the calculation of single conversion factor using experience period membership. Please provide an equivalent exhibit using the membership distribution from March 2015.

Response: Please see the attached excel file for the requested information. Although MVP is of the opinion that experience period enrollment is the best approach to derive the single conversion factor, MVP agrees with L&E's recommendation to the 2015 Exchange filing that a corresponding demographic adjustment should be made to the claim projection if a current snapshot is used to derive the single conversion factor. As a result, MVP has included its experience period HHS age factor as well as the March 2015 HHS age factor in the attached excel file.

15. Please supplement the narrative description of "Adjustment for average policy duration reflected in experience period" with quantitative support that illustrates the development of lines 14 and 15 in Exhibit 3.

Response: Please see the attached Excel file which shows MVP's deductible suppression factors and membership weights by deductible level and policy month for each subset of the data. The policy month represents the month of the current contract (out of 12) that the member is in. A factor of less than 1.00 indicates that MVP would be paying less than the 12 month average for a member at that deductible level in a given month while a factor greater than 1.00 indicates that MVP is paying more than the 12 month average.

Upon review of these factors, MVP has uncovered an error in the development of the Large Group 51-100 portion of the paid index rate. The factor used for this subset was the Agriservices factor instead of the factor supported by the subset. Using the correct factor would result in a \$2.49 PMPM decrease of the Large Group 51-100 portion of the paid index rate and a \$0.38 PMPM decrease on the single risk pool paid index rate.

16. Based on Exhibit 3, it appears that members from all other non-ACA compliant products (such as Agri-Services, Individual Indemnity, etc.) will buy MVP's exchange products in 2016. Justify why you expect membership from your other products to completely migrate to MVP's 2016 exchange products as opposed to the competitor.

Response: MVP did not assume membership changes in its 2016 membership projection as its competitive premium position was unknown at the time rates were submitted. MVP is assuming its 2016 membership projection is equal to its 2014 experience period membership.

17. Provide support for why you expect 61.8% of Non-ACA compliant small group to enroll in the 2016 individual market.

Response: Over the 2014 experience period, 61.8% of members purchasing ACA compliant products enrolled in individual plans. Prior to the ACA, the vast majority of MVP's membership that was eligible to purchase ACA compliant products was enrolled in small group plans. This shift from small group to individual products is expected to persist in 2016 as small group members renew into ACA compliant plans. As a result, MVP is projecting 61.8% of non-ACA compliant small group members to enroll in individual products in 2016.

625 State Street, PO Box 2207
Schenectady, NY 12301-2207
mvphhealthcare.com

18. Please provide a reconciliation between the expenses from the Actuarial Dataset (\$35.10), URRT (\$49.28), and Exh 5.

Response: The admin expense shown in the Dataset, \$35.10, is equal to the "General Administrative Load" PMPM from Exhibit 5 of the rate filing. Please see the attached excel file which provides a reconciliation between Exhibit 5 and the \$49.28 PMPM in the URRT. The amount in the URRT includes PMPM retention components (the expanded network load plus the Research Tax), a load for Bad Debt, and percent of premium Taxes/Assessments.

19. In the Actuarial Memorandum, it states that the admin load built into the 2016 rates is lower than the current cost structure; however, the administrative expense in the URRT is \$49.28 vs. the SHCE figures seen on pg. 11 of the Actuarial Memorandum. Please provide an explanation.

Response: The \$49.28 figure quoted above from the URRT includes general administrative expenses, bad debt, the VT Vaccine Pilot, the Federal PCORI tax, and the ACA Insurer Tax. The SHCE figures shown in the actuarial memorandum only reflect general administrative expenses. For an accurate comparison to Exhibit 5 in the rate filing, the figures shown in the SHCE should be compared to the \$35.10 PMPM general administrative fee MVP is proposing in its 2016 premium rates.

If you have any questions or require any additional information, please contact me at 518-388-2483.

Sincerely,

A handwritten signature in black ink that reads "Matthew Lombardo".

Re: 2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Ms. Tansen:

This letter is in response to your correspondence received 06/11/15 regarding the above mentioned rate filing. The verbal responses to your questions are provided below and any numerical examples are included in the attached excel workbook with tabs corresponding to each numbered question.

1. Please show quantitative development of how "adjustment for average policy during beginning/end of policy year" in Exhibit 3 were developed. Please use "ACA Compliant Individual" and "Non-ACA Compliant Individual Indemnity" as illustrative examples.

Response: Please see MVP's response to Question #15 of Objection Letter #1 for the requested information. Also, please note that MVP intends to adjust the LG 51-100 average policy duration factor once the GMCB issues their Decision and Order.

2. We note that the IBNR factor of 1.071 for Non-ACA Compliant Individual Indemnity products is higher than what we typically observe. Please provide narrative and quantitative support for the assumed IBNR factor.

Response: The IBNR factor for this block is higher than normal due to a \$114,000 claim incurred in December 2014 that was pended to pay at the time March 2015 IBNR was set. MVP confirmed that this claim paid in April 2015 and therefore the incurred estimate reflected in the rate filing is appropriate.

3. Provide data sources that were considered in continued use of a 2% morbidity improvement factor used in projection of non-ACA compliant experience period data and explain why this assumption is reasonable and appropriate.

Response: MVP does not have mature ACA compliant data to assess the adequacy of this adjustment factor since such a large percentage of policyholders were enrolled in these products for only a portion of 2014. MVP included this adjustment factor to be consistent with the GMCB Decision and Order issued in 2014 as well as MVP's 2015 Exchange Rate Filing which included the same adjustment factor.

4. Please give quantitative and narrative support on why you assess that 61.8% of the Non-ACA compliant small group plan members will purchase individual coverage. What was the individual enrollment reflected in the 2015 ACA compliant products versus the 2014 individual enrollment?

Response: Please see MVP's response to Question #17 of Objection Letter #1 for narrative support of this assumption. For January – May 2015 coverage dates, MVP has average ACA enrollment of 6,020 members. The average enrollment in Individual products is 3,722 members over this time period which equals 61.8% of the total

625 State Street, PO Box 2207
Schenectady, NY 12301-2207
mvphealthcare.com

ACA enrollment. Therefore, MVP has not experienced any shift in ACA membership between Small Group and Individual products from 2014 to 2015.

5. Please update Exhibit 2b to show additional line items by drug category.

Response: Please see the attached excel file.

6. In illustrating the drivers of rate change, provide quantitative derivation for the base period experience in line 32 and reinsurance recoveries illustrated in line 38 of the actuarial dataset.

Response: Please see the attached excel file. Please note that Pediatric Dental is an explicit line item in the 2015 filing, while these claims are included in the Experience Period Medical Claims for 2016. Also note that MVP did not include experience period capitation and non-FFS claims in their 2015 rate filing; only projection period capitation and non-FFS claims were included. For an apples-to-apples comparison, MVP included their 2016 projection period capitation and non-FFS claims in the drivers of rate change calculation and ignored the experience period claim cost for these expenses.

7. What was the methodology used in deriving the induced utilization factors illustrated in Exhibit 6? Explain differences in the development of induced utilization factors in the 2015 filing versus the 2016 filing.

Response: For the 2016 rate filing, MVP determined the actuarial value of its experience period membership and the corresponding induced utilization factor for each benefit design. The member weighted induced utilization factor was then computed and equals 1.047.

For the 2015 rate filing, MVP did not compute a member weighted induced utilization factor. MVP computed the book of business actuarial value which equaled 0.701. The induced utilization factor that corresponds to an actuarial value of 0.701, 1.030, was then applied to the starting index rate for pricing.

Due to the increasing slope of the induced utilization curve, MVP is of the opinion that the methodology used in setting 2016 rates is more appropriate than the methodology deployed in the 2015 rate filing.

8. We note that the benefit relativity reflected in index rate (0.701) as illustrated in row 8 of Exhibit 6 is unchanged from the 2015 rate filing. Why is the average inforce benefit actuarial value unchanged?

Response: The fact that the average inforce benefit actuarial value is unchanged between the 2015 and 2016 rate filing is coincidental. The inforce benefit actuarial value was computed by determining the expected paid-to-allowed ratio for the experience period block of business using MVP's proprietary benefit relativity model. Note that the paid-to-allowed ratio used to compute the actuarial value does not reflect induced utilization.

9. Please provide quantitative support for the derivation of induced demand reflected in index rate (1.047 induced utilization corresponding to 0.701 benefit relativity) as illustrated in row 9 of Exhibit 6. In doing so, explain why it is higher than the induced utilization factor of 1.044 for a higher actuarial value of 0.73.

Response: Please see the attached excel file for a quantitative derivation of the induced utilization factor and refer to MVP's response to Question #7 for an explanation of why the book of business induced utilization factor is greater than the induced utilization factor for an actuarial value of 0.73.

625 State Street, PO Box 2207
Schenectady, NY 12301-2207
mvphhealthcare.com

10. Reconcile the 2014 incurred claim PMPM of \$339.44 in the actuarial memo data set and the claim experience provided in Quantitative Response to Objection #1 - SERFF.pdf.

Response: Please see attached excel workbook. The \$0.25 PMPM difference between the Medical Expense PMPM is due to the allocation of IBNR. The IBNR factor applied to Response #1 was a factor for the entire rolling 12 month time period, while the factors applied to the Actuarial Memorandum Dataset were applied on a monthly basis.

MVP's VT IBNR models are not separated by group size. As a result, if the distribution of claims between Small Group, Large Group and Individual varies by month, the rolling 12 month IBNR factor applied to 12 months of claims for a subset of the IBNR model will be different than the same IBNR factors applied to the same claims on a monthly basis.

11. For catastrophic plans, the induced utilization factor driven by age and gender adjustments is 0.636 in 2016 filing versus 0.533 assumed in the 2015 filing. Demonstrate how the primary driver contributing to the 27.3% rate change is due to differences in assumed age/gender distribution in 2015 versus 2016 filing.

Response: Please see the attached excel file. Had the demographic factor not changed, the catastrophic plan would've increased by 10.2% rather than 27.3%. The other large driver of this rate increase was switching from a % of premium administrative load to a PMPM administrative load.

12. For the new gold plan that was added (Plan ID: 77566VT0040023), how was the membership distribution mapped?

Response: MVP assumed that all members currently enrolled in ACA compliant plans would remain in the same plan for 2016. As a result, no members currently enrolled in ACA compliant plans are reflected in the projection period membership for this coplan.

For non-ACA compliant members, MVP reviewed 2014 enrollment by actuarial value and mapped members to a metal level. From there, MVP assumed a uniform distribution of membership by plan within each metal level. This coplan was not treated differently than any other coplan, and the projection period membership reflects the logic described above.

13. How does the assumed 4.2% in reinsurance recovery reconcile against the historical claim distribution in rows 233 thru 237 of the actuarial memo dataset?

Response: The projected Temporary Reinsurance Pool (TRP) recovery for the members shown in the Actuarial Memorandum Dataset totals \$641,882, or 3.4% of the \$18,992,310 total claims shown on line 237. Because this claim amount was requested to tie out to Worksheet 1 of the URRT, only 2014 Small Group and Individual MVP Health Plan, Inc. data is reflected in this calculation. The 4.2% TRP Recovery assumed in the rate filing is a 3-year average for all blocks of business in the rate filing.

Re: 2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Ms. Tansen:

This letter is in response to your correspondence received 06/17/15 regarding the above mentioned rate filing. Please see below for responses to your questions.

1. The weighted average actuarial value using the projected member months in Worksheet 2 of the URRT is .70 compared to the paid to allowed factor in Worksheet 1 of the URRT, which is .81. Please provide a quantitative demonstration to justify this significant difference.

Response: The 0.81 paid to allowed factor shown in URRT Worksheet 1 represents the projected paid to allowed ratio of MVP's historical paid and allowed claims projected to the rating period. The 0.70 factor shown on Worksheet 2 of the URRT represents the member weighted average of the benefit AVs from MVP's benefit relativity model. For pricing benefit plans, MVP utilizes a benefit pricing model that provides projected paid to allowed ratios for every benefit plan offered by MVP. The model is not calibrated to the actual paid to allowed ratio because the model is only used to determine plan relativities and not actual projected net paid liabilities. The benefit AVs on Worksheet 2 represent the relative value of each benefit plan compared each other and it is not necessary for these AVs to represent the actual paid to allowed ratio of each plan or the block as a whole.

2. To the extent that you have not answered this question in your responses to previous interrogatories in this matter, please explain why most of the utilization factors in Exhibit 6 are larger than the HHS prescribed factors that you referenced on Page 10 of your Actuarial Memorandum.

Response: MVP's induced utilization factors are sloped to comply with the HHS induced utilization factors while HHS' induced utilization factors are uniform for each metal level. MVP believes that induced utilization factors should be sloped across a given metal level since benefit richness varies within a metal level. Plans that are below the midpoint of a given metal level (i.e. midpoint of bronze metal level = 0.60, silver = 0.70, etc.) have an induced utilization factor that is less than the HHS induced utilization factor while MVP's induced utilization factor is greater than the HHS induced utilization factor plans that are above the midpoint of a given metal level.

3. What adjustment, if any, did you make for the relative morbidity of the groups with 51-100 employees currently insured by Cigna that will purchase coverage in the exchange?

Response: MVP does not have any information regarding the demographic profile or morbidity of the cohort in question. Therefore, no adjustments were made MVP's claim projection to reflect the relative morbidity of Cigna groups with 51-100 employees that will purchase coverage through the Exchange in 2016.

625 State Street, PO Box 2207
Schenectady, NY 12301-2207
mvphhealthcare.com

4. Please indicate whether as a result of legislative changes in Vermont during the 2015 session you expect to make any adjustments to the above captioned filing that will affect rates and that are not already incorporated into the filing. Provide details including the rate impact for each adjustment.

Response: MVP does not expect to make any changes to this rate filing due to the outcome of the 2015 Vermont legislative session.

5. Please explain any measures MVP Health Plan has taken to control administrative costs in the past five years including measures taken in relation to staff compensation. For any measures taken related to staff compensation, please include details.

Response: Over the past several years MVP has taken every opportunity to try and reduce administrative costs. This includes:

1. Reviewing salary and benefits for all employees on an annual basis
2. Renegotiating contracts with vendors
3. Reducing lease space and rent costs
4. Optimizing work efforts by replacing manual tasks with automation
5. Reducing FTE's where possible
6. Incorporate reduction of administrative costs into our corporate goals
7. Having a competitive bid process for most goods or services purchased

If you have any questions or require additional information, please contact me at 518-388-2483.

Sincerely,

Re: 2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Ms. Lee:

This letter is in response to your correspondence received 06/29/15 regarding the above mentioned rate filing. Please see below for responses to your questions.

1. In your response to Objection Letter #3, dated June 22, 2015, your first answer stated that "The benefit AVs on Worksheet 2 represent the relative value of each benefit plan compared [to] each other and it is not necessary for these AVs to represent the actual paid to allowed ratio of each plan or block as a whole." Your response did not address the AVs the HCA referred to in Objection Letter #3. In your June 18, 2015 answer to Objection Letter #2, question #9, you provided the weighted average Actuarial Value that you are using in pricing your plans and it equates to 0.701. We would expect that the "Paid to Allowed Average Factor in Projection Period" factor in Worksheet 1 of the URRT of 0.81 to be closer to the 0.701 average in your answer to objection #9. Please provide a quantitative justification for this difference.

Response: For MVP's response to Objection Letter #3, I misread the question and apologize for not providing a response to the question being asked. The AVs from Worksheet 2 of the URRT represent the Federal AVC benefit value. MVP did not use the benefit values from the Federal AVC for pricing so the values will not match.

There are two primary drivers of the differences between the paid-to-allowed value of 0.81 in Worksheet 1 of the URRT and the 0.701 average actuarial value included in MVP's response to Objection Letter #2, question #9. First, the 0.701 average actuarial value does not include induced utilization while MVP's projected paid-to-allowed ratio reflects induced utilization; this accounts for ~4.0% of the difference between the two values. Second, MVP's benefit relativity model is not calibrated to the actual paid to allowed ratio because the model is only used to determine plan relativities and not actual projected net paid liabilities; the calibration factor accounts for the remaining difference between the values in question.

Re: 2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Ms. Lee:

This letter is in response to your correspondence received 07/01/15 regarding the above mentioned rate filing. Please see below for responses to your questions.

1. Please provide the estimated impact on the 2014 CTR due to the report that CCIIO released with the actual reinsurance recoveries and risk adjustments for 2014.

Response: MVP's actuarial department has discussed this topic with MVP's finance department, and we will not be able to provide a response to this question until MVP has finalized its risk corridor calculation and Federal Loss Ratio testing as all of these parts must be analyzed together to understand the impact of risk transfer charges and reinsurance receipts on earnings. The risk corridor calculation and Federal Loss Ratio testing do not have to be finalized until 07/31/2015, and MVP's finance department will be working on these calculations in the upcoming month.

2. Please discuss what impact the risk adjustment transfer should have on the 2016 premiums. Provide proposed changes, if any, to the 2016 premiums with updated exhibits.

Response: MVP believes the proposed 2016 Exchange premium rates filed on 5/15/2015 do need to be adjusted and are still representative of the market-wide average risk. Additionally, MVP does not believe that 2014 risk adjustment results should be used to indicate a carrier's relative risk position in 2016 for a number of reasons:

- A significant percentage of ACA compliant members included in the experience period data set were not enrolled in a plan subject to risk adjustment for a full year in 2014. As a result, MVP's relative risk position in 2014 could be skewed because member claims subject to risk adjustment do not reflect a full year of claims.
- The 2014 risk adjustment results do not reflect the small group expansion to 100 employees.
- Approximately 2/3 of the membership included in the experience period data used to derive MVP's proposed 2016 rates was not enrolled in ACA compliant plans.
- CMS' risk adjustment model is changing for 2016 dates of service. Therefore, the model used to compute MVP's 2014 relative risk position is not the same model that will be used in the projection period.

625 State Street, PO Box 2207
Schenectady, NY 12301-2207
mvphealthcare.com

MVP respectfully requests the Green Mountain Care Board to confirm that carriers will not be allowed to revise their 2016 proposed Exchange rates in excess of the 2014 risk adjustment results. MVP also requests the Green Mountain Care Board to confirm that carriers will not be allowed to revise their rating methodology from the method that was deployed in their initially proposed 2016 Exchange rate filing.

If you have any questions or require additional information, please contact me at 518-388-2483.

Sincerely,

A handwritten signature in black ink that reads "Matthew Lombardo".

Re: 2016 Vermont Exchange Rate Filing
SERFF Tracking #: MVPH-130053210

Dear Ms. Lee:

This letter is in response to your correspondence received 07/06/15 regarding the above mentioned rate filing. Please see below for a response to your question.

1. Objection Letter #3, question 4 asked if you expect to make any adjustments to the filing that will affect rates as a result of the 2015 legislative session. You responded that you do not expect to make any changes. At the July 18, 2015 Green Mountain Care Board (GMCB) meeting, Craig Jones, Director of the Vermont Blueprint for Health, presented on recent payment changes to the Blueprint program. As a part of this presentation, he demonstrated that MVP will save \$741,460.26 next year due to recent Community Health Team (CHT) payment market share adjustments. Do you agree with this figure? If not, what is the correct total savings? What is the PMPM savings for your Exchange products? Is this savings incorporated into your Exchange product filing? If not, why not? If you do not plan to incorporate this cost savings because you believe it is offset by other cost increases that were not incorporated into your filing, please specify the source and amount of the cost increase.

Response: The changes made to MVP's portion of Blueprint payments were not made as a result of legislation passed in the 2015 session. The decision to change how Blueprint payments were apportioned was a decision made by Craig Jones, the director of the Blueprint program.

The proposed changes presented to the GMCB reflect an increase to MVP's Patient Centered Medical Home (PCMH) liability relative to its 2014 PCMH liability. This amount needs to be considered when analyzing the savings associated with the Blueprint program as PCMH costs + CHT costs equal the total Blueprint program costs. MVP's calculations and written response below reflect the total Blueprint program savings and not just CHT savings.

After accounting for the proposed changes to the Blueprint program payments, MVP's revised best estimate of the Blueprint program cost for 2016 is \$2.46 PMPM; this translates to \$1.35 PMPM savings over the projected cost of this program reflected in MVP's 2016 Exchange filing. MVP's filed rates can

be reduced by this additional amount. On an annualized basis, MVP projects savings of \$489,937 relative to its 4Q 2014 payment for this program.

MVP accounted for the initially proposed Blueprint changes in its 2016 filing. Because the Blueprint financial changes have been further modified and subsequently adopted, MVP is further adjusting its calculations to reflect these final numbers. Specifically, the projected Blueprint costs reflected in the 2016 Exchange filing are equal to the Blueprint costs reflected in MVP's 3Q 2015 rate filings (submitted in February 2015). For the 3Q 2015 rate filings, MVP analyzed the components of its Blueprint costs in 4Q 2014 and made adjustments to the data based on preliminary discussions of proposed changes to Blueprint program payments for 2015. MVP assumed the average PCMH payment would double and the CHT payment would decrease by 55%. The first table below provides a summary of the differences between MVP's actual 4Q 2014 Blueprint payments and the projected Blueprint payments reflected in the 2016 Exchange filing. The second table summarizes the differences between what is reflected in MVP's 2016 Exchange filing and our revised best estimate of this program's costs after Craig Jones' presentation at the June GMCB meeting.

MVP Health Care Projected Blueprint Program Costs - 4Q 2014 Actual vs Proposed in 2016 Exchange Filing

	4Q 2014 Actual	Proposed 2016 Exchange Filing
CHT PMPM	\$10.78	\$4.85
PCMH PMPM	\$2.23	\$4.46
% of Commercial Membership Attributed to Blueprint	40.9%	40.9%
Total PMPM Cost of Blueprint Program	\$5.32	\$3.81
MVP Commercial Membership as of April 2015	14,281	
Savings Between 4Q 2014 Actual to 2016 Exchange Filing	\$259,267	(A)
$= (\$5.32 - \$3.81) * 14,281 * 12$		

MVP Health Care Projected Blueprint Program Costs - Proposed in 2016 Exchange Filing vs 2016 Revised Best Estimate (Reflects Changes Proposed by Craig Jones at June GMCB Meeting)

	Proposed 2016 Exchange Filing	2016 Revised Best Estimate
CHT PMPM - firm	\$4.85	\$2.77
PCMH PMPM – estimated value of incentive payments	\$4.46	\$3.25
% of Commercial Membership Attributed to Blueprint	40.9%	40.9%
Total PMPM Cost of Blueprint Program	\$3.81	\$2.46
MVP Commercial Membership as of April 2015	14,281	
Savings Between 2016 Exchange Filing and Revised Best Estimate	\$230,670	(B)
$= (\$3.81 - \$2.46) * 14,281 * 12$		
Total Annualized Savings Relative to 4Q 2014 Blueprint Costs	\$489,937	= (A) + (B)

Services subject to deductible (DD) unless otherwise stated.
 ** 3 PCP Office Visits are covered in full, not subject to deductible
 ^ Services provided by a tribal facility are covered in full for non-HDHP plans. For HDHP plans, services are covered in full if provided by a tribal facility after the deductible is met.
 # Generic Drugs are Covered in full up to age 10, after Pharmacy deductible is met
 Note: MVP's Non-Standard Plan Designs also have a Member Wellness Rider (Form: FRVT-301) attached which provides up to \$50 per adult member (age >= 18) per year.
