Subject:Blue Cross and Blue Shield of Vermont - NAIC # 53295
The Vermont Health Plan - NAIC # 95696
Q3 2021 Large Group Rating Program Filing

Dear Mr. Crompton:

Attached for the Green Mountain Care Board's review and approval is Blue Cross and Blue Shield of Vermont's and The Vermont Health Plan's Q3 2021 Large Group Rating Program Filing. As directed by the Board, this filing combines the various factor filings for large group rating components (trend, large claims, benefit relativity, administrative fees and contribution to reserve, and the formula itself) into a single filing.

Please let me know if we can answer any questions or provide further information during your review.

Sincerely,

Ruth Greene

Re: The Vermont Health Plan
3Q 2021 LG Rating Program Filing
SERFF Tracking #: BCVT-132713919

Dear Jude Daye:

Thank you for your responses to our previous request. We require the following information to continue our review of this filing.

Questions:

1. Provide more detail regarding the confidential unit cost support provided.
2. As noted in the 2019Q3 filing, the administrative charge for January 2019 renewals was \$40.85 PMPM. The proposed administrative charge for 2022 renewals is \$61.50 PMPM. This represents a 50% increase in administrative cost PMPM in the span of three years. What specific items have contributed to these increases? Please provide more detail that itemizes these increases and explanations or justifications for these increases.

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible to every objection in our letter, but no later than March 23, 2021. Note that the responses can be submitted separately and do not have to be submitted all at the same time.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

Kevin Rugeberg, FSA, MAAA

Re: The Vermont Health Plan
3Q 2021 LG Rating Program Filing
SERFF Tracking #: BCVT-132713919

Dear Jude Daye:

We have been retained by the Green Mountain Care Board (“GMCB”) to review the above referenced group products filing submitted on 2/10/2021. The following additional information is required for this filing.

Notice regarding proper responses:

- A minimum-acceptable response to quantitative questions from us must include a spreadsheet calculation with retained formulas such that we can replicate the calculations therein.
- Explanatory responses are merely a supplement to the spreadsheet material and in of themselves will constitute a lack of response.

Questions:

1. Clarify if and how the Medicare Primary manual rate increase is incorporated in the “Impact of Formula and Factor Changes” table in the actuarial memorandum.
2. Explain why the MLR calculation in the actuarial memorandum assumes that various quantities, such as rebates, will be unchanged and untrended from 2019, despite some of these values being assumed to have changed elsewhere in the filing.
3. Regarding the deferred care adjustments provided in Exhibit 6E and used in Exhibits 1A and 1B:
 - a. Provide more detail about how these factors were developed, including any implicit trend level incorporated in the calculation.
 - b. The sample calculation shown in Exhibit 1B shows a simple average of the 12 monthly factors applicable to the experience period. By L&E’s

estimation, this would typically result in an overstatement of about 4% to incurred claims. This is because the highest inverse factors are applicable to the months with the lowest claims, and vice versa. Please confirm the precise manner in which this adjustment will be calculated for particular groups.

4. According to the actuarial memorandum, the impact of new drugs in the past 3 years averaged about 5.4% per year. Explain why clinical guidance of a 5% increase from new drugs in the future should be applied to the historical trend, which presumably already includes past new drugs of a similar magnitude.
5. Provide more detail on how Exhibit 2G is used. For example, the factors for Rx claims from March 2017 and April 2017 are 1.000 and 0.8863, respectively. Does this imply that claims from April are trended by an additional 13% over claims in March?
6. Please list all rating variables which vary between the TVHP and BCBSVT filings.

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible to every objection in our letter, but no later than March 9, 2021. Note that the responses can be submitted separately and do not have to be submitted all at the same time.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

Kevin Ruggeberg, FSA, MAAA

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

1. Purpose

Blue Cross and Blue Shield of Vermont (BCBSVT) and The Vermont Health Plan (TVHP) perform large group rating on a case-by-case basis. We accomplish rating through a formulaic approach that blends recent group experience with a manual rate according to a credibility formula. We may adjust formula results for underwriting judgment and/or management decisions. This filing establishes the formula, manual rate, and accompanying factors that we will use for renewals beginning upon approval of this filing, most notably January 2022 renewals.

Once approved, we will use this filing for insured large group and grandfathered small group renewals (we will refer to them collectively as large groups for the remainder of the filing) until superseded by a subsequent filing. In the event that renewals require factors with effective dates or experience periods beyond those explicitly presented in this filing, we will calculate appropriate factors using the same base data and methodology used in this filing. This filing will apply beginning with rates communicated within seven business days after the date of its approval and continuing until at most seven business days after the date of approval of the next BCBSVT and TVHP Large Group Rating Program filings. The term “communicated,” for this purpose, means a written proposal delivered to a large group account.

2. Overview and Rate Impact

2.1. Overview

This filing includes a description of the renewal formula and the development of each of the factors used in it. We use this formula for insured products, including Cost Plus. BCBSVT projects that this filing will affect 5,828 members (3,423 subscribers) in 36 groups. These totals include members of both BCBSVT and TVHP, and we will refer to the combined population as BCBSVT throughout this memorandum.

We will describe in detail the formula used in the renewals. We will then detail the factors applicable to all insured large groups. The factors in the build-up of the projected claims cost include the trend factors, benefit relativities, manual rate, and large claims factors. In addition to the projected claims cost, we will explain the calculation of administrative charges, the net cost of reinsurance, contribution to reserve, and state and federal assessments, all of which are included in the rate development.

Finally, we will discuss factors applicable only to specific products. Cost Plus customers purchase Individual and Aggregate Stop Loss (ISL and ASL) from BCBSVT. Cost Plus products are not available through TVHP.

2.2. Historical Financial Results

Below is the combined medical and pharmacy experience for the prior five calendar years. This includes BCBSVT and TVHP insured large group experience. Additionally, we show loss & expense ratios for Cost Plus groups.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Insured Large Group Experience							
Year	Incurred Claims	Administrative Charges	Earned Premium	Gain/(Loss)	Loss & Expense Ratio	Target Loss and Expense Ratio	Member Months
2016	\$86,034,897	\$12,804,526	\$95,541,735	(\$3,297,687)	103.5%	98.0%	218,650
2017	\$86,520,109	\$10,424,245	\$92,106,277	(\$4,838,077)	105.3%	98.0%	197,954
2018	\$81,698,684	\$12,621,438	\$86,961,470	(\$7,358,653)	108.5%	98.0%	176,430
2019	\$83,943,117	\$10,154,503	\$88,800,868	(\$5,296,752)	106.0%	98.5%	166,597
2020 ¹	\$46,649,139	\$9,391,176	\$56,468,497	\$428,181	99.2%	98.5%	97,941

Cost Plus Experience		
Year	Loss & Expense Ratio	Member Months
2016	95.0%	515,583
2017	95.4%	514,809
2018	99.8%	5,045
2019	89.2%	4,893
2020	97.3%	2,632

The incurred claims, administrative expenses, and earned premium are from BCBSVT's GAAP financials. The claims include capitations, fee-for-services claims, certain assessments, and other claims expenses.

The chart below shows the expected and actual contribution to reserves from the previous five years for Insured Large Groups. The expected contribution to reserves reflects ordered reductions to CTR as well as modifications to actuarial factors that were not recommended by the independent reviewing actuary.

Expected and Actual Contribution to Reserves			
Year	Filed	Expected	Actual
2016	2.0%	0.8%	-3.5%
2017	2.0%	2.0%	-5.3%
2018	2.0%	0.8%	-8.5%
2019	1.5%	-2.2%	-6.0%
2020	1.5%	0.8%	0.8%

We note the high variance between the expected and actual contribution to reserves prior to 2020, in which the results included the effects of the deferral of non-emergent care in the early stages of the pandemic. Recent filings have included increases to the manual rate that were a correction to experience through 2019, as well as numerous enhancements to the rating methodology to make rates more accurate on a group-by-group basis and in aggregate. Overall, the performance of actual results to expected imply a consistent absence of conservatism in the factors underlying the filing.

¹ 2020 underwriting results are preliminary as of December 31, 2020.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

2.3. Impact of Formula and Factor Changes

To compute the impact of changes to the rating formula and the various factors in this filing on large group premium rates, we use the concept of a “pure manual premium,” which is the premium that can be developed for each group in the existing block of business using none of their own experience data. Two renewals are developed for each group: the first renewal applies the approved factors currently in force (BCVT-132350241 and BCVT-132350492) with an effective date of January 1, 2021. The second renewal uses the factors and formulas detailed in this filing with a January 1, 2022 effective date. By nature of the differing effective dates, the latter renewal includes an additional year of health care cost trend.

Impact of Formula and Factor Changes				
Renewal Year	2021	2022	Component Increase	Premium Impact
Filing Year	Q3 2020	Q3 2021		
Manual Claims (a)	\$40,366,749	\$40,620,528	0.6%	0.6%
Projected Rebates	-\$1,702,517	-\$2,786,403	63.7%	-2.4%
Admin	\$3,693,435	\$4,220,541	14.3%	1.2%
Reserve	\$651,909	\$665,001	2.0%	0.0%
Mandates and Assessments	\$919,067	\$941,436	2.4%	0.0%
Additional Items (b)	\$1,255,319	\$1,239,942	-1.2%	0.0%
Total				-0.6%

(a) The manual claims increase is less than the change in the manual rate due to the change in the membership underlying the manual rate. We normalize the demographic factors and industry factors to the membership in each respective filing. The demographic and industry basis of the 2021 manual rate is higher than that underlying the 2020 manual rate, which results in the increase in the manual claims being less than the manual rate increase we detail in Section 6.1.

(b) Additional Items include net cost of reinsurance, Cost Plus stop loss, broker commissions, the OneCare Coordination Fee, and fees paid to outside vendors.

The above approach has been used to generate a proxy increase for a hypothetical group that is renewing with zero experience credibility, exactly average demographics and industry, and no underwriting judgment or management discretion applied to the proposed or in-force rates. The actual rate increase experienced by any specific group will be based on the group’s own circumstances, including its claims data, demographic makeup, large claims experience, and so forth.

This total impact of formula and factor changes should not be interpreted as the new formula resulting in a 0.6 percent premium decrease for any specific group.

3. Formula Description

We develop rates for active and Medicare Primary subscribers separately based on their own experience. Both the formula and factors described in this filing are the same for both populations except where noted. Medicare Primary rate tiers are not offered on TVHP.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Benefit-Adjusted Projected Single Claims Rate

Exhibit 1A contains a sample calculation of the benefit-adjusted single claims rate. Page 1 of the exhibit applies to active members and page 2 applies to Medicare Primary members. For each case, we start the rating with a twelve-month experience period with at least two months of runout². We develop the experience rate for medical and pharmacy claims separately. We determine a pooling point based on the size of the case at the end of the runout period and split the experience period claims (line A) into amounts above (line B) and below (referred to as capped claims, line D) the pooling point. We exclude COVID-19 related claims (line C) from the development. Exhibit 6D contains a list of excluded diagnosis and procedure codes, which we will update as new information becomes available. Section 6.7 provides further details on the exclusion of COVID-19 related claims.

We apply completion factors (line E) developed from the monthly financial reporting process (best estimates before margin) to capped claims to produce completed capped claims (line F). We use the formula and factors described in Milliman's *2020 Health Cost Guidelines – Reinsurance* to calculate expected claims above the pooling limit (line G). We add the expected claims above the pooling limit to the completed capped claims to produce large-claim-adjusted experience period claims. Medicare Primary members generally do not have claims near the group's pooling point, so we do not pool their claims.

We then multiply the large-claim-adjusted experience claims by an adjustment factor (line H) to reflect structural changes between the experience period and the rating period. This adjustment modifies the experience to reflect such things as mandated benefit changes, contractual provision changes, etc., that, in the judgment of the underwriter, are necessary to make the experience appropriate for the estimation of the expected claims in the rating period.

As part of the experience adjustment factor, we include an adjustment that accounts for the return of medical claims deferred in the spring of 2020 by the COVID-19 pandemic. Exhibit 6E provides the factors which are applicable to medical claims. The factors represent the degree to which claims were less than or greater than their expected level, such that a factor greater than one indicates that claims were higher than expected due to the return of deferred care. We apply the inverse of the factors on a monthly basis to calculate a single multiplicative factor that is applicable to each experience period that is comprised of months affected by the slowdown or deferral of claims. We develop the factors based on modeling presented to the Department of Financial Regulation in December 2020. Given the factors deviate significantly from one in March, April, and May of 2020, the underwriter will typically construct a 12-month medical period using non-consecutive months so that the experience period provides a reliable base for projecting claims for the rating. In this typical approach, the impact of the adjustment factors will have a dampening impact on claims.

We divide the result (line I) by the number of member months during the experience period (line J) to produce the adjusted experience period claims per member per month (line K).

We then divide the adjusted experience period claims per member per month (PMPM) by a seasonally-adjusted benefit relativity value to neutralize any effect of seasonality and benefits on the paid claims.

² For first year renewals where twelve months of experience is not available, we typically use claims incurred in nine months with no runout.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

To determine this factor, we first determine a benefit relativity factor for each benefit plan (using the factors described in section 5) and contract tier type (single, 2-person, family, etc.). Based on the seasonal patterns observed as part of the reserving process for each calendar month, we determine seasonal factors for CDHPs and for non-CDHPs and normalize them so that they total to 12. We combine these factors to calculate seasonal benefit relativity factors for each combination of benefit plan, contract tier type, and month. We apply these factors to the number of contracts for each benefit plan, contract tier type, and month in the experience period. We total the results and divide the resultant sum by the number of member months in the experience period. We apply the seasonal factors regardless of the length of experience period, but if there is a 12-month experience period and there are no changes in benefits or enrollment, the normalization of the seasonality factors would cause the seasonal adjustment to be 1.000. This produces the average experience period seasonally-adjusted benefit relativity factor (line L).

We adjust for any change in the demographics of the group between the experience period and the rating period by calculating the average demographic factor for each period and applying the ratio of projection to experience (line M). We multiply the adjusted experience period claims PMPM (line K) by the demographic normalization factor and divide by the average experience period seasonally-adjusted benefit relativity factor (line L) to produce the benefit-adjusted experience period single claims rate (line N), which is the expected cost for a single contract in the experience, neutral of benefit and seasonality. We then multiply this by a trend factor (line Q, as calculated in section 4) to project the claims from the experience period to the rating period.

We blend the projected single contract rate (line R) with the adjusted manual rate (line S, as described in section 6.1) using the credibility formula described below.

We calculate the credibility factor (line T) as follows:

$$Credibility = \sqrt{\frac{Member\ Months}{Upper\ Bound}}$$

The pooling point determines the upper bound. We base the pooling limit on the group's membership in the current month. Please see the abbreviated table below for details. The underwriter may apply discretion in the event the current month's membership is not appropriate for determining a pooling limit (e.g. a significant change in enrollment due to an acquisition or layoff).

Membership (Current Months)	Pooling Point	Upper Bound Member Months
Medicare Primary		8,325
0 to 299	\$70,000	14,002
300 to 499	\$90,000	16,127
500 to 999	\$110,000	17,923

If member months are greater than the upper bound, the credibility factor will be 1. We pool Cost Plus products at their attachment point. Exhibit 6A provides a complete list of upper bound member months by pooling point, while Exhibit 6B details pooling points by current month membership.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

To blend the projected single contract rate with the adjusted manual rate, we use the following equation:

$$\text{Benefit-Adjusted Projected Single Claims Rate} = \text{Projected Single Contract Rate} \times (\text{Credibility}) + \text{Adjusted Manual Rate} \times (1 - \text{Credibility})$$

Multiple Experience Periods

BCBSVT uses multiple experience periods (when available) to develop the benefit-adjusted projected single claims rate. Following the methodology described above, we calculate an experience rate for the first and second year preceding the experience period. We then apply the credibility formula recursively to the residual portion of the rate. The table below provides a demonstration of the application of the credibility formula for a group with 50 percent credibility in each experience year.

Experience Period	Proportion of Rate
YE 202106	50.0%
YE 202006	25.0%
YE 201906	12.5%
Manual Rate	12.5%

Three years of experience is the maximum that we will use. In the absence of extenuating circumstances, all renewals will use the maximum number of years available. In the event we do not consider historical experience appropriate or reliable for rating periods (e.g. a significant change in enrollment due to an acquisition or layoff), the underwriter will use fewer years of experience and document the rationale for such a change.

Exhibit 1B provides a detailed sample calculation of the benefit-adjusted projected single claims rate using three years of experience.

In previous filings, we adjusted the manual rate when more than one year of experience was used. This adjustment helped control for various trend levels in each experience period. Beginning with this filing, we instead trend prior experience periods to the most current experience period using observed trends and apply the trend factors in section 4 to trend from the most current experience period to the rating period. Exhibit 2G contains the trend factors applicable to prior periods. For months following our trend base (that is, after February 2020 for medical claims and August 2020 for pharmacy claims), the observed trend is set to the trend factors in section 4. There are separate observed trend factors for active medical, Medicare Primary medical, and pharmacy.

To develop the observed medical trend factors, we calculate the year-over-year utilization trend in the year ended February for each year in the trend experience base. We apply actual cost increases to calculate the total observed medical trend. The observed pharmacy trend is the allowed claims trend of the trend experience base described in section 4. Historical trend factors for Medicare Primary medical claims are the approved trends for prior periods from the 2021 TVHP Medigap Blue Rate Filing (SERFF# BCVT-132559586).

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

If the credibility of the first year of experience is in excess of 66.67%, the underwriter shall develop rates using a 3-2-1 blend of experience periods and not utilize the manual rate.

Required premium by Plan, Tier Type

Exhibit 1C provides a sample calculation of premium. For each plan and contract tier type anticipated in the rating period, we calculate projected claims (line B1) as the product of the benefit-adjusted projected single claims rate (S) and the benefit relativity factor (as described in section 5) for the plan and contract tier (line A). For any premium components that are exclusively applicable to either active or Medicare Primary members, we only include the component in the respective rate tier(s) to which it applies.

We use the members per contract tier during the last month of the runout period as the basis for the projected members per tier in the rating period. The underwriter will adjust this ratio if, in their opinion, the result is not representative of the expected values in the rating period.³

Underwriting Judgment Adjustments

If, in the underwriter's professional judgment, the standard formula would not produce appropriate rates for the case being rated, the underwriter will make such modifications as needed to produce appropriate rates. The underwriter will document in the case file the reason(s) for the adjustment(s) and the method of determining the appropriate adjustment(s).

Management Discretionary Adjustments

For marketing or other reasons, management may decide to modify the rates on a specific case or block of cases. The underwriter will document in the case file the adjustment(s) made, along with a description of the nature of the adjustment(s).

4. Trend Factors

The source of data for trend development is BCBSVT's data warehouse, except where noted below. To ensure the accuracy of claims information, we reconcile the data used against internal reserving, enrollment, and other financial reports. The data includes claims from BCBSVT Cost Plus groups, BCBSVT ASO groups of under 1,001 members, BCBSVT insured large groups, BCBSVT insured small groups with more than 10 members, BCBSVT insured association health plans with more than 10 members, and TVHP insured large groups. The data also excludes insured large groups with much higher costs than average that have left BCBSVT in 2020. The above lines of business cover substantially similar populations under similar benefit packages. Combining these homogeneous populations creates greater consistency and credibility within the trend factor development.

We exclude large ASO groups and ASO groups with special pricing arrangements. BCBSVT recently experienced large membership movement out of the small group market. Due to significant changes in membership, we exclude all membership from small groups that were not continuously with BCBSVT

³ E.g., the number of contracts in a particular tier may be small (or even 0). In such instances, the underwriter should use appropriate values based on total block of business or other appropriate sources.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

throughout the trend experience period. We exclude claims from Medicare Primary members. Medicare Primary trend is discussed in section 4.5. We exclude compounds from the pharmacy trend development.

The COVID-19 pandemic significantly impacted medical claims, with non-urgent services being cancelled or postponed from March 2020 through May 2020, due to the stay at home order and facilities and providers preparing for a potential surge in COVID cases. Retail pharmacy claims were not impacted, other than by an acceleration in refills in March. For medical trend analysis, we use claims incurred from March 1, 2016 to February 29, 2020, paid through September 30, 2020. For retail pharmacy trend analysis, we use claims incurred from March 1, 2016 to August 31, 2020, paid through September 30, 2020. We apply completion factors to estimate the ultimate incurred claims for each period shown in the exhibits.

4.1. Medical Trend Development

Medical trend is composed of three pieces: cost, utilization, and intensity. In our analysis, we combine utilization and intensity within the utilization metric and analyze the unit cost separately. For fee-for-service claims, we combine plan payment with member cost sharing to calculate the allowed charges. For claims under a capitation arrangement, we combine a fee-for-service equivalent amount with the member cost sharing to calculate allowed charges.

4.1.1. Unit Cost

Observations of recent contracting and provider budgetary changes are the main source of unit cost trends. During the year ended February 2020, roughly 51 percent of total claims dollars were provided by Vermont facilities and providers directly affected by the hospital budget review process of the Green Mountain Care Board (GMCB). For hospitals under the jurisdiction of GMCB review, we start with the assumption that the GMCB will approve hospital budgets for October 1, 2021 and October 1, 2022 that support identical commercial increases as those approved for October 1, 2019. Many Vermont hospital received higher than historical budget increases in the 2020 cycle. We expect that the 2021 and 2022 cycles will return to 2019 cycle levels. In the previous filing, we included an increase to cost trend of 2.1 percent to account for expense overage reported by the hospitals. This was denied by the GMCB in their order but when the final budgets for 2020 were approved by the GMCB, the average rate increase was 2.4 percent higher than the previous year⁴. For the 2021 budget cycle, BCBSVT cannot estimate the impact of expense overages due to the reporting waivers in light of COVID. While there remains uncertainty around the final overall cost to the system of this pandemic, both due to lower revenue and higher expenses, we decide to view the 2020 cycle as a rebasing year and look to the GMCB to ensure that future hospital budget increase revert back to historical levels. In the event that BCBSVT is made aware of future budget increase that would diverge from this assumption, BCBSVT will file an interim trend filing to best align the cost trend used in pricing with expected cost trend.

4

<https://gmcboard.vermont.gov/sites/gmcb/files/documents/B21%20Approved%20Budget%20Submissions%20with%20NPR%20graph%20as%20of%20Oct%201st.pdf>

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

We assume for other providers within the BCBSVT service area that overall 2021 and 2022 budget increases will be identical to those implemented during calendar year 2020, since their 2020 increases were aligned with historical increases

The provider contracting and actuarial departments worked together to assess the impact these increases would have on contracts for BCBSVT Managed Care, BCBSVT Non-Managed Care, and TVHP Managed Care contracts. For marketing reasons, provider contracting negotiates different unit cost increases for each of the three contracts. To reflect these differences, we calculate a cost trends for each contract. Finally, we derive unit cost increases for providers outside the BCBSVT service area from the Fall 2020 Blue Trend Survey, which is a proprietary and confidential dissemination of the BlueCross BlueShield Association.

Exhibit 2A shows the details of the cost increases by contract and type of claim.

We use the expected increases to trend the contract-normalized claims to the projection period. The unit cost trend is the ratio of claims for the year ending December 2022 to claims for the year ending June 2020, converted to an annual factor.

The chart below summarizes the results of the analysis:

Medical Unit Cost Trend			
	BCBSVT Managed Care	BCBSVT Non- Managed Care	TVHP Managed Care
Vermont facilities and providers impacted by GMCB's Hospital Budget Review	4.7%	4.7%	4.7%
Other facilities and providers	3.7%	3.8%	3.8%
Total	4.2%	4.3%	4.3%

4.1.2. Utilization & Intensity

To examine historical utilization trend patterns, we first normalize claims for unit cost increases. We measure contract changes for the entirety of the experience period explicitly for each facility within our service area as well as the three largest physician groups. We normalize claims to the February 2020 contract at each unique provider by applying a factor equal to the product of the impact of each contracting change from the experience month through February 2020. We assume that the derived trend for other claims increases monthly on a continuous basis.

We measure increases for fee schedules and other chargemasters by applying each schedule to a market basket of services. The market basket is defined by using Current Procedural Terminology (CPT) codes and CPT modifier combinations that are present in each of the effective periods the schedules covered. Using the same experience period data used throughout the trend analysis, we compare total allowed costs for the selected CPT and CPT modifier combinations under each schedule to estimate the percentage increase. For contracts under Diagnosis Related Group (DRG) arrangements, we compare the charge for the 1.000 DRG service for each period. Finally, for services under a discount-off-charge arrangement, we use the contracted chargemaster increase provided by our provider contracting department.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

We derive contracting changes for out-of-area claims from the Fall 2020 Blue Trend Survey, which is a proprietary and confidential dissemination of the BlueCross BlueShield Association.

We also normalize for changes in demographics and normalize each month to the average number of BCBSVT working days in the year ended February 2020.

We normalized claims to the February 2020 contract at each unique provider by applying a factor equal to the product of the impact of each contracting change from the experience month through February 2020. We assume the derived trend for other claims to be continuous.

To ensure that random high claims do not skew the trend calculation, we removed all claims of members who exceeded \$500,000 in allowed medical claims in a year ended February. As the utilization component includes intensity, an increase in high cost claimants can disproportionately impact the year-over-year and regression calculations.

4.1.2.1. Facility Claims

For facility claims, we select a 0.6 percent utilization trend.

Using the array of PMPM claim costs net of high claimants and adjusted for contract, aging, and number of working days, we performed 24-month regressions, 36-month regressions, 48-month regressions and time series calculations. Certain time series methods, such as those assuming no trend, those assuming that trend is dampening, or those for which there is not sufficient historical data⁵, are not included, as these are inappropriate for use in trend development and/or for the data available.

The year ended February 2020 over year ended February 2019 trend, after the adjustments described above, is -0.4 percent. Logistic regressions using 24, 36 and 48 months calculate trends of 1.4 percent, 0.5 percent, and 0.9 percent, respectively. The Holt-Winters and double exponential smoothing time series give a similar range of projected trends (-0.5 percent to 1.3 percent), although the root mean squared errors (RMSEs) for all three demonstrate that these methods provide a worse fit to historical data than the regressions.

⁵ The seasonal additive, seasonal multiplicative, single moving average, and single exponential smoothing methods cannot be used since they assume zero trend. The dampened trend method inherently assumes a slowdown of trend. The double moving average method requires three times the amount of historical data as projection periods, and therefore cannot be used for this analysis.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Method	Trend	RMSE
48 Months Logistic Regression	0.9%	17.84
48 Months Linear Regression	0.8%	18.01
Holt-Winters' Multiplicative 48 Monthly	0.0%	24.05
Holt-Winters' Additive 48 Monthly	0.0%	24.05
Double Exponential Smoothing 48 Monthly	1.3%	23.47
36 Months Logistic Regression	0.5%	17.67
36 Months Linear Regression	0.4%	17.76
Holt-Winters' Multiplicative 36 Monthly	-0.1%	26.54
Holt-Winters' Additive 36 Monthly	-0.3%	26.53
Double Exponential Smoothing 36 Monthly	-0.2%	25.25
24 Months Logistic Regression	1.4%	17.69
24 Months Linear Regression	1.4%	17.77
Holt-Winters' Multiplicative 24 Monthly	-0.1%	31.67
Holt-Winters' Additive 24 Monthly	-0.1%	31.66
Double Exponential Smoothing 24 Monthly	-0.5%	21.28
Year/Year	-0.4%	

The RMSE values for the time series are significantly higher than for the regressions; therefore, we do not consider them good predictors. While recent observed facility trends are down, as shown by the year-over-year trend, the longer-term regressions are all positive. We select a 0.6 percent trend for facility claims to balance the long-term and short-term results.

Details for facility utilization trends are shown on Exhibit 2B, pages 2 to 4.

4.1.2.2. Professional and Ancillary

We select a 1.1 percent utilization trend for professional and ancillary claims.

Professional claims utilization experienced one-time events that skew the overall year over year results. First, BCBSVT introduced a lab benefit manager in August 2019, which helped reduce the number and cost of lab services. Second, in the fall of 2019, we observed a shift in site of care for vaccines from provider offices to pharmacies. While the cost of the administration continues to flow through the medical benefit, the cost of the vaccines has shifted to the retail pharmacy benefit. Some services such as chiropractic and physical therapy services have experienced cyclical oscillations on a two-year pattern. Finally, mental health and service abuse (MHSA) services have seen larger than average increases for the past two years.

To account for these events, we analyzed the number of services by type of service as identified using place of service and CPT or HCPSC codes on the claims.

After excluding claims for independent labs, therapeutic services (chiropractic, physical, occupational, speech) and vaccinations, and carving out MHSA services, the number of services per thousand

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

members per month can be seen to increase at a marginally declining rate each year. On the other hand, MHSA services have increased by 10.3 percent each of the last two years.

Year Ended	All, except excluded categories		Mental Health and Substance Abuse	
	Services per 1,000 member per month	Annual Increase	Services per 1,000 member per month	Annual Increase
February 2017	703.99		113.95	
February 2018	720.23	2.3%	119.76	5.1%
February 2019	728.15	1.1%	132.23	10.4%
February 2020	732.60	0.6%	145.76	10.2%

Based on the historical patterns above and the work in Vermont to expand access to mental health services, especially during and after the pandemic, a 0.5 percent increase in non-MHSA services and a 10 percent increase in MHSA services best projects the utilization of professional services.

Category	Year Ended February 2020 Services per 1,000 member per month	Annual Increase in Services	Months of Trend	Projected Calendar Year 2022 Services per 1,000 member per month
All, except excluded categories	732.60	0.5%	34	743.05
MHSA	145.76	10.0%	34	191.04
Total	878.37	2.2%	34	934.08

Over the past few years, services with lower cost per service, such as office visits and urgent care, have seen higher than average increases in number of services. Using the year ended February 2020 cost per service, normalized for cost increases as described above, along with the number of services by type (excluding independent labs, therapeutic services and vaccines), we calculate an annual cost per service:

All, except excluded categories		
Year Ended	Weighted Average cost per service	Annual Increase
February 2017	\$149.68	
February 2018	\$148.40	-0.9%
February 2019	\$147.78	-0.4%
February 2020	\$146.90	-0.6%

We expect the historical patterns of increase services at lower cost to continue through the projection period at a rate of negative 0.5 percent. This is aligned with the historical patterns and with BCBSVT programs to ensure that members have access to high quality care for lower costs.

Category	Year Ended February 2020 Weighted Average cost per service	Annual Change due to Mix	Months of Trend	Projected Calendar Year 2022 Weighted Average cost per service
All, Except excluded categories	\$146.90	-0.5%	34	\$144.82
MHSA	\$87.37	0.0%	34	\$87.37
Total	\$137.02	-1.0%	34	\$133.07

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Combining the number of services and mix trend, we get the following total professional utilization trend:

Category	Annual Increase in Services	Annual Change due to Mix	Total Annual Professional Utilization Trend
All, Except excluded categories	0.5%	-0.5%	0.0%
MHSA	10.0%	0.0%	10.0%
Total	2.2%	-1.0%	1.1%

We observed very consistent levels of increase in number of services (with the exceptions of the services excluded above) and very consistent decreases in the average cost per service, driven by a change in mix. There is no reason to believe that these consistent patterns will not persist through the projection period. We therefore select the total annual professional utilization trends of 10 percent for MHSA services and zero percent for all other professional and ancillary services, yielding an aggregate professional trend of 1.1 percent.

Details on professional trends are shown on Exhibit 2B, pages 10 to 11.

4.1.2.3. Pharmaceuticals

The recent acceleration in cost for pharmaceuticals processed through the medical benefit warrants a separate analysis for these claims. The accelerating cost for these drugs may unduly affect utilization trend, so we consider it appropriate to develop a discrete trend for these claims. Exhibit 2B, page 8 shows the historical allowed claims for this category. As shown on Exhibit 2B, page 9, three drugs experienced very unusual changes over the experience period used for the trend analysis. After excluding these drugs, the results are more consistent. We do not expect these unusual trends to continue through the projection period. We will instead apply the selected trend to all pharmaceuticals processed through the medical benefit.

Based on the assumptions shown on Exhibit 2B, the year-over-year pure premium trend after exclusions is 8.1 percent. Using the average projected cost increase for VHP outpatient services from 2021 to 2022 (5.3 percent; see section 4.1.1), we calculate a projected annual utilization increase of 3.3 percent. The impact of new drugs for the past three years was 6.7, 6.3 and 3.2 percent. Our clinical experts advise us that even with the ongoing COVID-19 pandemic, we can expect the impact of new drugs to increase trend by five percent. We therefore select an 8.1 percent utilization trend for pharmaceuticals.

4.1.2.4. Induced Utilization

Given that the impact of induced utilization has been minimal over the past few years, we continue to not make an adjustment to utilization trend. Exhibit 2C shows the historical paid-to-allowed ratio of claims in the trend experience base.

We discuss the concept of induced utilization further in section 5.1.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

4.1.3. Total Medical Trend

The total medical trend factors are the product of the utilization trend and the unit cost trend factors.

Medical Trend – BCBSVT Managed Care				
Category	Facility	Professional	Pharmaceuticals	Total
Unit Cost	5.0%	2.5%	13.8%	
Utilization	0.6%	1.1%		
Total Medical Trend	5.6%	3.6%	13.8%	5.9%

Component	BCBSVT Managed Care	BCBSVT Non-Managed Care	TVHP Managed Care
Total Medical Trend	5.9%	6.0%	6.0%

To calculate the overall medical total trend to be applied in the renewal formula, we trend the manual rate (see section 6.1) and experience medical claims to calendar year 2022 based on the network. We then divide the projected claims cost by the experience claims cost to calculate the overall medical trend.

Total Allowed Medical Trend				
Network	BCBSVT Managed Care	BCBSVT Non-Managed Care	TVHP Managed Care	Total
Experience Allowed Claims (Medical Only)	\$9,356,806	\$22,728,087	\$2,941,362	\$35,026,255
Trend Factors for 29.1 months	1.1469	1.1505	1.1506	
Trended Claims	\$10,731,647	\$26,148,138	\$3,384,401	\$40,264,186
Annual Trend				5.9%

4.2. Retail Pharmacy Trend

On November 9, 2020, BCBSVT announced Vermont Blue Rx, an innovative prescription drug benefit service that will improve the consumer experience, drive better health outcomes and lower costs for members, providers, and employers.

As part of this program, BCBSVT has selected a new pharmacy benefit manager (PBM). Effective July 1, 2021 the new PBM will provide custom programs, tools and digital technology designed to better manage overall drug spending and increase member engagement in pharmacy and health care through a more integrated health and wellness service platform. This collaboration will BCBSVT’s commitment to providing members with convenient and affordable access to prescription medications through a comprehensive retail and home delivery pharmacy network with no disruption to our members.

Similar to previous Large Group Rating Program filings, we base our cost trend calculation on Average Wholesale Price (AWP) and apply a separate factor in the rating formula to account for contracting changes. We analyze the components of trend (cost and utilization) separately for brand and generic drugs. We estimate the impact of brand drugs going generic based on the brand drugs that are likely to

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

lose patent in the projection period. Specialty drugs are very high cost drugs with low utilization. Because of their relative infrequency, we consider it more appropriate to look at the overall PMPM trends for these drugs rather than separate cost and utilization components. We calculate the overall pharmacy trend by combining the separate projections.

Non-Specialty Drug Utilization

Exhibit 2D provides the monthly and the 12-month rolling data for non-specialty drugs, along with the corresponding year-over-year and exponential regression trends. There are separate developments for generic cost, brand cost, and overall non-specialty utilization. We use the number of days supply in the utilization development, rather than the number of scripts, to normalize for changes in the days supply per script (e.g. increased use of 90-day fills). Because there are several popular brand drugs that have become generic during the experience period, or will become generic during the projection period, we combine the data for generic and brand drugs for the purpose of analyzing utilization patterns. We exclude vaccines from the non-specialty utilization calculation.

Due to COVID-19, many members refilled their prescription early in March 2020. This changed the pattern of monthly days supply per member. To adjust for this one-time event, we smooth monthly days supply per member for the periods from March 2020 to May 2020 and June 2020 to August 2020 by using the monthly spread from the same months in 2019.

Exhibit 2D, page 3, shows monthly cost per day supply, adjustment calculation and the 24-month regressions.

The regressions use 24 data points to best capture an adequate amount of the most recent history of drug costs. The number of days per member has been increasing since 2019 with no signs of abatement based on the latest data. We therefore select a 3.5 percent non-specialty utilization trend. This is aligned with our recent filings on other lines of business.

Generic Cost Trend

To ensure that the generic cost trend is not skewed by the arrival of new generic drugs, we perform regressions on monthly Average Wholesale Price (AWP) per days supply on only those generic drugs that have been in the market for more than 36 months.

Exhibit 2D, page 1, shows monthly cost per day supply and the 24-month regressions.

We select an annual trend of 1.1 percent for generic cost trend.

The newly released generic drugs are much more expensive than older generics and have become a larger portion of the total generic days supply. We apply the same cost trend to both categories of generic drugs as we expect that once drugs have been on the market for a few years, they will assume the same patterns of cost increases as older generics. To account for the different in cost per supply between the two categories, we adjust the mix between the older and new generic drugs to reflect the most recent six months in the trend experience period.

Brand Cost Trend

The monthly AWP cost per day supply for brand drugs is impacted by the mix of new and older brands. Brands that have been in the market for one to two years are, on average, less expensive than older

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

brands. To account for this change in mix, we perform a 24-month regression on monthly AWP cost per day supply for brand drugs that have been in the experience for at least four years.

Exhibit 2D, page 2, shows the monthly cost per day supply and the 24-month regressions.

We select 7.1 percent for the brand cost trend, which is the average of the 24-month regression result on monthly data, the 24-month regression on rolling 12-month data, and the most recent year over year trend. This result is consistent with recent filings, and we consider it to be an adequate, yet not excessive, outlook of future trends.

Compounds are one-off prescriptions that are constructed at the pharmacy from component ingredients. Because they are not sold on a wholesale basis, there is no official AWP. We select a 0.0 percent cost trend for compounds.

Vaccines cost experienced major increases through the fall of 2019, and then slowed ever since. We expect this up and down pattern to continue through 2022 include a 10 percent cost trend for vaccines.

We also do not expect over-the-counter drugs to follow the overall Brand cost trend. Based on historical data, we select a *negative* 15 percent cost trend for OTC drugs.

Specialty Drugs

Exhibit 2E shows the calculation of specialty trend for all specialty drugs. We select a 19.6 percent specialty trend, which is the average trend produced by a 24-month regression on monthly cost, a 24-month regression on rolling 12-month cost, and the most recent year over year increase. For our regressions, we chose 24 points of monthly data to best capture the most recent history of drug costs. The selected trend of 19.6 percent is aligned with the previous Large Group filings and filings for other BCBSVT business.

Total Pharmacy Trend

Instead of explicitly projecting a generic dispensing rate, we separate the drugs into seven categories:

- Generics: Drugs that have been generic since at least September 2017
- New generics: Generic drugs that have been on the market for fewer than 36 months (launched September 2017 through August 2020)
- Brands going Generic: brands that we expect to become available in generic form in the projection period, based on a list from our pharmacy benefit manager
- Vaccines
- Over the Counter (OTC)
- Compounds
- All other Brands

As shown on Exhibit 2F, we trend the days supply for each category forward at the same rate of 3.5 percent and calculate the total non-specialty allowed drug trend as 4.5 percent⁶.

⁶ The non-specialty trend prior to contract adjustments is [REDACTED].

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Using the PMPM claims as weights between non-specialty and specialty claims for the 12 months ended August 2020, we apply the annual trends for 28 months. For drug claims in the year ended August 2020, we apply the contracted discounts and dispensing fees for the experience period and CY 2022 to AWP to calculate the total effective trend based on anticipated discount improvements:

Allowed Pharmacy Trend	
Category	Annual Trend
Generic	5.6%
Brand	10.5%
Brands Going Generic	-46.5%
Specialty	19.6%
Total (Contract Adjusted) ⁷	11.0%

Please note that we apply contract changes separately from trend in order to accurately capture the timing for each renewal.

Exhibit 3K contains the contract adjustment factors that we will apply to the drug claims in a group's renewal. These factors assume that both the experience period and rating period are 12 months. For cases where this is not true, or for periods not provided in the exhibit, we will calculate an appropriate factor using an analogous methodology.

4.3. Overall Total Trend

Using the claims experience⁸ for the groups included in the manual rate (see section 6.1), we calculate the overall allowed trend as follows:

Category	Allowed PMPM	Allowed Trend
Medical	\$505.04	5.9%
Pharmacy	\$106.55	11.0%
Total	\$611.60	6.8%

4.4. Leveraged Trends

We will continue to use the leverage formulas from the Q3 2019 Large Group Filing. The formulas for leverage are below:

Leverage Formulas	
Medical	$-0.0385 \times (AV) + 1.0389$
Drug Card	$-0.0680 \times (AV) + 1.0691$
Drug - CDHP 100% Wellness	$-0.0559 \times (AV) + 1.0564$
Drug - All Other CDHP	$-0.0723 \times (AV) + 1.0722$

⁷ The total trend prior to the contract adjustment is [REDACTED].

⁸ For medical claims, we use claims incurred 7/1/2019 through 02/29/2020 and 06/01/2020 through 09/30/2020. For pharmacy claims, we use claims incurred 11/1/2019 through 10/31/2020

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Exhibits 3I and 3J provide examples of leverage factors.

Applying the leverage factors for benefits present in the periods July 2019 through February 2020 and June 2020 through September 2020 for medical and the year ended October 2020 for drug for the groups included in the manual rate, we calculate the following paid trends:

Category	Paid PMPM	Paid Trend
Medical	\$ 410.52	6.8%
Pharmacy	\$ 94.07	11.6%
Total	\$ 504.59	7.7% ⁹

4.5. Medicare Secondary Trends

Medicare Secondary plans cover two categories of services: Medicare-covered services which are subject to member cost share (deductible/coinsurance) and services which are not covered by Medicare. We do not adjust services subject to Medicare cost sharing for network, as Medicare sets the allowed charges, whereas we do adjust the services not covered by Medicare using the contract factors described above to bring all charges to a single network.

For Medicare claims, we use cost and utilization trends from the 2021 TVHP Medigap Blue rate filing (BCVT-132559586).

Category	Allowed Trend
Inpatient	-1.2%
Outpatient	4.0%
Professional	4.0%

The trends used for services not covered by Medicare are the same as the trends developed for use with active benefits. We use the same pharmacy trends for Medicare Secondary plans as we use for active plans.

4.6. Vision Trend

All large groups benefits include vision exams for both adult and children. Large groups can also purchase a rider to cover frames and lenses. Due to the different coverage options and limitation in the vision data to identify the cost of the exam and the materials, we calculate the trends for the large groups with exam only coverage.

Year Ended	Paid PMPM
February 2018	\$0.61
February 2019	\$0.53
February 2020	\$0.53

⁹ The paid trend without the pharmacy contract adjustment is ██████.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

We expect 2021 and 2022 to remain at the level experienced in the most recent two years ended February; we therefore select a 0.0 percent overall vision paid trend.

While the data for groups with coverage for exam and materials is not fully credible for trend development, we observed the following PMPM paid claims results. We believe that the overall 0.0 percent trend for vision benefits is therefore reasonable for both exam and material benefits.

Year Ended	Average Membership	Paid PMPM
February 2018	1,998	\$3.51
February 2019	1,994	\$3.69
February 2020	1,734	\$3.45

5. Benefit Factors

To determine standardized claims rate relationships, also called relativities, BCBSVT creates models that simulate the impact of member benefits for all types of plans. The models determine the allowed charges for the 12 months of claims included in the study and “re-adjudicate” the claims, thereby simulating the impact of member cost sharing for a given benefit plan.

The claims data used in the models is from BCBSVT’s data warehouse. To ensure accuracy, the claims data has been reconciled against internal reserving, enrollment and other financial reports. The starting point of the analysis is allowed charges as determined by the BCBSVT claims adjudication system. The claims data includes benefit codes that enable us to identify the services and benefit structures (copays, deductibles, and coinsurance) for each claim.

The models use incurred allowed charges from January 2018 to December 2018, paid through November 2020¹⁰. We trend the allowed charges 48 months to the 12-month period that begins January 1, 2022. The majority of the business that will be renewed using these relativity factors has a January 1 renewal date; the rating formula adjusts the trend for non-January renewals (see section 6.1).

The data includes claims from BCBSVT Cost Plus groups, BCBSVT ASO groups, BCBSVT insured large groups, BCBSVT insured small groups, and TVHP insured large groups. Combining these homogeneous populations creates greater consistency and credibility within the relativity factor development. We combine CDHP and non-CDHP claims. We exclude claims from certain large ASO groups, as the rich benefits offered by those groups are not in line with the leaner offerings of most insured large groups. We also exclude groups that have special benefits. This predominantly refers to groups that have specific reimbursement with particular providers outside of BCBSVT’s contracts and/or claims processing function. We exclude claims from groups that do not have pharmacy coverage through BCBSVT. We create separate models for active members and Medicare Primary members.

For each benefit plan, the models produce the simulated PMPM values of the benefits. We divide the PMPM for each plan by the average trended paid claims rate from the BRV experience period to

¹⁰ In January of 2019, BCBSVT changed its operating platform for claims, membership, and benefits. The level of detail needed to re-adjudicate benefits under different cost sharing parameters was not immediately available following the operating platform transition. While the 2019 data did become available during 2020, its availability was not sufficiently timely to support its use in developing the models for this filing.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

produce its benefit relativity (BRV). We calculate relativities for medical only plans, Rx only plans, and integrated CDHP plans for both active employees and Medicare Primary employees.

5.1. Models for Active Employees

Benefit Relativity Model: Medical

We use the total medical trend by type of service to project to the rating period. We calculate cost trends for each type of service using the discrete unit cost trend method above, while applying the separate utilization trends developed for facility and professional services (see section 4.1.2).

Using the contracted reimbursement schedules, we calculate network factors that represent the different network contracts. Using these factors, we can include all claims in each of the three networks by adjusting each claim to the basis of a single network. This enables us to combine all the experience for each plan design.

We categorize claims according to how benefits are paid and generate one record for each member, date of service, and type of service. We assign each record a cost share (deductible/coinsurance, copay, covered in full) for each plan modeled. For all products, we assign claims for preventive mandated benefits a “covered in full” cost share independently of the product that is being modeled.

The model tests one benefit design at a time. It determines the member portion of the allowed charges, and from this, a total simulated paid PMPM for each benefit design. The model considers the impact of copay, deductible, coinsurance, out-of-pocket maximum, and preventive mandated benefits. If the average allowed cost of a category is less than the assigned copay, we assume that the member paid the full cost of the service.

BCBSVT offers products on several different networks based on the three provider contracts (BCBSVT Managed Care, BCBSVT Non-Managed Care, and TVHP Managed Care). Depending on the network, there may be more than one tier of coverage (generally referred to as in-network and out-of-network) and different networks may have different providers in each tier. Below is a chart showing which providers are in which tiers on many of BCBSVT’s common networks. Providers who accept the indicated provider contract are considered to be in-network. For providers in the BlueCard® network and non-participating providers, ‘In’ indicates coverage for these providers on the in-network tier of coverage, and ‘Out’ indicates coverage for these providers on the out-of-network tier of coverage.

Network Name	Provider Contract	BlueCard Providers	Non-Participating Providers
HMO	TVHP Managed Care	N/A	N/A
POS	TVHP Managed Care	Out	Out
VHP Select	BCBSVT Managed Care	N/A	N/A
VHP	BCBSVT Managed Care	Out	Out
EPO PCP	BCBSVT Managed Care	In	N/A
VHP Open Access	BCBSVT Managed Care	In	Out
EPO	BCBSVT Non-Managed Care	In	N/A
PPO	BCBSVT Non-Managed Care	In	Out
Indemnity	BCBSVT Non-Managed Care	In	In

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

If BCBSVT were to quote a product not on one of the networks listed above, or one featuring different provider networks for selected services, we would modify the base data in the BRV models to correspond to the desired changes (for example, excluding certain providers or modifying allowed amounts) before simulating the benefit impact.

We use BRVs in two places in the rating formula described in Section 3. We calculate the average experience period seasonally-adjusted benefit relativity factor (line K in Exhibit 1A) using BRVs for the benefits in the experience period and the projected claims for the rating period (line B1 in Exhibit 1C) using BRVs for the benefits in the rating period.

Exhibits 3B and 3C display the relativities for active employees for some medical products currently in our book of business.

Benefit Induced Utilization: Medical

We use factors for the impact of induced utilization (IU) developed by the federal Department of Health and Human Services (HHS) for use with Qualified Health Plans, to which we found the curve of best fit $IU = AV^2 - AV + 1.24$, where AV is the actuarial value of the benefit plan. HHS created their IU factors for combined medical/pharmacy AV, but as we develop BRVs separately for medical and pharmacy plans, we will apply the formula to medical-only AVs. We normalize the curve such that the average AV underlying the base BRV experience period returns a utilization adjustment of 1.00. In other words, if a simulated benefit has an AV less than the average AV, then utilization will be reduced (i.e. factor < 1.00). If a simulated benefit has an AV greater than the average AV, then the benefit will have induced utilization (i.e. factor > 1.00).

Benefit Relativity Model: Pharmacy

We use the total trend, by type of drug, for brand, generic, and specialty drugs as described above (section 4.2) to project to the rating period.

Within the model, we assign all pharmacy scripts, including specialty, to one of six categories: retail generic, retail preferred brand, retail non-preferred brand, mail generic, mail preferred brand, and mail non-preferred brand. We apply flags to identify several categories of drugs that are either required to be covered in full (ACA contraceptives and vaccines) or for which a group may purchase a rider to offer additional coverage (some fertility drugs) or exclusion (lifestyle drugs). We also flag drugs for which a group may offer special cost-sharing arrangements, such as diabetic medications and wellness drugs. We assign these flags by National Drug Codes as reported to us by our current PBM.

We adjust the experience period data to reflect the major brands that are expected to become generic between 2018 and 2022. The list comes from a report provided by our current PBM.

For these brands, in the first six months (the exclusivity period), we reduce the Average Wholesale Price (AWP) by 10 percent and keep the brand discount. For the months after the exclusivity period, we reduce the AWP by 10 percent and change the discount to the generic discount. The 10 percent reduction in AWP is based on industry standard assumptions, supported by our own analysis of AWP changes for drugs that have moved from brand to generic over the past several years.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

We generate one record for each member and date of service combination. One record can have more than one script category. The model tests one benefit design at a time. It determines the member portion of the allowed charges and a total simulated paid PMPM for each benefit design. The model considers the impact of the deductible, coinsurance, copays and out-of-pocket maximum (OOPM). Following the ACA, the model excludes contraceptives and vaccines from the cost sharing. If the average allowed cost of a category is less than the applied copay, we assume that the member pays only the full cost of the script. With Vermont Act 171, all pharmacy benefits effective January 1, 2021 or later will have an OOPM of \$1,400. It is possible that this limit will increase effective January 1, 2022, following the IRS rules for Health Savings Accounts and High Deductible Health Plans. The exhibits include the \$1,400 OOPM on pharmacy benefits.

Exhibit 3D displays the relativities for active employees for some pharmacy products currently in our book of business.

Benefit Induced Utilization: Pharmacy

We performed an independent analysis to measure the correlation between the benefit design and the quantity of pharmacy prescriptions consumed. We adjust the pharmacy benefits in two ways. First, the generic utilization varies with the benefit design. We use claims and membership data from January 2017 through August 2020 to create a table to adjust the base generic utilization up or down depending on the difference in the generic and brand copays of the member's drug plan. Exhibit 3A displays the adjustments by brand/generic copay differential for generic and brand scripts.

Second, we perform a separate analysis to adjust for the overall pharmacy benefit. We assign a modeled actuarial value to every benefit in the experience period. The correlation uses the actuarial value as the independent variable and days supply as the dependent variable. A linear equation best fits the data. We normalize the curve such that the actuarial value underlying the base BRV benefit returns a utilization adjustment of 1.00. The resulting formula is $y = \frac{1}{x} + 0.99$.

Although we use two steps to calculate the induced utilization, we are not adjusting the data twice. The adjustment for difference in generic/brand copays changes the mixture of scripts (i.e. generic dispensing rate) without adjusting the overall frequency of scripts. The richness or leanness of the plan, as measured by the actuarial value, drives an adjustment to the overall frequency of scripts without changing the mixture of scripts.

As the model includes claims from both CDHPs and drug cards, we also adjust for the type of benefit being modeled. Claims incurred on a CDHP have a lower cost per script than claims incurred on a drug card. We calculate a factor for each benefit type by taking the ratio of the cost per script for that type and the cost per script from all claims in the model. For CDHPs, the factor is 0.5 and for drug cards the factor is 1.0 .

Benefit Relativity Model: Integrated (CDHP)

The CDHP model combines both the medical and pharmacy models described above. There is one record for each member, date of service and type of service combination. The model calculates separate medical and pharmacy actuarial values and makes the appropriate utilization adjustment for each.

Exhibit 3E displays the relativities for active employees for some CDHP products currently in our book of business.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

5.2. Tier Factors

Each BRV model generates a BRV for different contract tiers as well as the overall PMPM described in the sections above. The models perform this calculation by re-adjudicating claims across families in addition to member-based readjudication. We apply the tiered BRVs to each benefit's member distribution by tier to calculate the average BRV for the experience benefits and to the group's member distribution by tier to calculate the average BRV for the rating benefits.

We use the same tier factors developed in the previous filing to spread the required premium across tiers. Exhibit 3L displays these factors.

5.3. Models For Age 65+ Medicare Secondary Plans

Benefit Relativity Model: Medical

Medicare Primary rate tiers are only available on the BCBSVT Non-Managed Care network. To develop benefit relativity values for Medicare Secondary plans, we use the same method as we do for the active factors. For the claims base, we use allowed charges incurred between January 2018 and December 2018, paid through November 2020, for members whose primary insurance is Medicare. Given the scarcity of Medicare Primary members in the BRV experience (fewer than 1,000 member months), we also include Medicare Primary members from groups who we exclude from the development of the active BRVs (e.g. large ASO groups). If the underwriter believes that these claims are not representative of a given group's characteristics (for example, due to demographics or morbidity), we will develop relativities using an analogous method with more representative experience.

Medicare Secondary plans cover two categories of services: Medicare-covered services which are subject to member cost share (deductible/coinsurance) and services which are not covered by Medicare. We do not adjust services subject to Medicare cost sharing for network, as Medicare determines the allowed charges, whereas we adjust the services not covered by Medicare using the contract factors described above to bring all charges to a single network.

We trend the allowed charges to the 12-month period that begins January 1, 2022. We use the total medical trend by type of service as described in section 4.5.

As with the active benefits, the model simulates the effects of a benefit design on the trended allowed charges and calculates a simulated paid PMPM. The model divides this paid PMPM by the Medicare Primary manual rate (without the adjustment for changes to the pharmacy contract) to produce the benefit relativity value. Unlike the active benefits, we do not make an adjustment for induced utilization due to the richness of the benefit. As Medicare is the primary insurance for these plans and Medicare-covered claims make up 85 percent of the trended allowed charges, we do not believe that the richness of the secondary insurance will have any influence on utilization.

Exhibit 3F displays the relativities for some Medicare Secondary medical products currently in our book of business.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Benefit Relativity Model: Pharmacy

To calculate relativities for pharmacy benefits for plans that are secondary to Medicare, we use the same methodology as for active employees. We use allowed charges incurred between January 2018 and December 2018, paid through November 2020, for members whose primary insurance is Medicare (including members in large ASO groups, as with the medical experience). If the underwriter believes that these claims are not representative of a given group’s characteristics (for example, due to demographics or morbidity), we will develop relativities using an analogous method with more representative experience.

We trend the allowed charges to the 12-month period that begins January 1, 2022 using the same trends as used for active members. We assign pharmacy scripts to the same categories as for the active members and adjust allowed charges for brands going generic between the experience period and the rating period. The model produces a simulated paid PMPM for each benefit design and adjusts for the impact of induced utilization on the mixture and frequency of scripts as described for the active relativities above. We divide the adjusted paid PMPM by the Medicare Primary manual rate (without the adjustment for changes to the pharmacy contract) to produce the relativity.

Exhibit 3G displays the relativities for some Medicare Secondary pharmacy products currently in our book of business.

Benefit Relativity Model: Integrated (CDHP)

The Medicare Secondary CDHP model combines both the medical and pharmacy Medicare Secondary models described above. We create one record for each member, date of service, and type of service combination. The model calculates separate medical and pharmacy actuarial values and makes the appropriate utilization adjustments for each.

Exhibit 3H displays the relativities for some Medicare Secondary CDHP products currently in our book of business.

5.4. Formulary & Pharmacy Options

BCBSVT and TVHP offer groups a selection of formularies. Groups can select either the BCBSVT Formulary or the National Performance Formulary. Groups electing the National Performance Formulary receive greater rebates than those on the BCBSVT Formulary. To calculate the impact of the change, we identify rebate-eligible claims for the large groups impacted by this filing. We calculate rebate totals under the contracted terms of each formulary. For groups changing formularies, we apply the below factors to projected rebates. We adjust the factors proportionately if the experience period includes a mix of formularies.

Experience Formulary	Rating Formulary	Rebate Multiplier
BCBSVT Formulary	National Performance	
National Performance	BCBSVT Formulary	

BCBSVT and TVHP offer groups a choice of specialty pharmacy networks option. Groups electing the exclusive option receive greater discounts on specialty drugs. We calculate pharmacy contract factors for this option using an analogous method to the standard contract factors, as described in Section 4.2.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Exhibit 3K Page 2 provides the discount factors for the exclusive network option. For groups with a mix of specialty options in their experience period, we adjust the factors using an analogous methodology proportionately to the programs in effect.

5.5. Riders

BCBSVT and TVHP file riders with the Vermont Department of Financial Regulation (DFR) that allow large groups to add or modify covered services. These riders include, but are not limited to, the Benefit Enhancement Rider, Acupuncture Benefits Rider, and Wellness Drug Rider. For riders that modify covered services, we use the benefit relativity model to price the rider. For riders that cover an optional service, we develop allowed charges from groups offering that coverage and adjust to the group's benefit or use a reasonable approximation of allowed charges if no experience data exists. If, in the underwriter's professional judgment, the election of a rider will create material anti-selection, the underwriter will modify the rate as necessary to reflect appropriate rates for the rider being rated, as described in section 3.

6. Other Factors Applicable to All Large Groups

6.1. Manual Rate

The manual rate for active members is calculated from medical paid claims PMPM incurred between July 1, 2019 through February 29, 2020, and June 1, 2020 through September 30, 2020 and pharmacy paid claims PMPM incurred between November 1, 2019 and October 31, 2020. Both medical and pharmacy claims include claims paid through November 30, 2020. We use claims from the groups impacted by this filing, trended to calendar year 2022 using the trends and pharmacy contract adjustments described in section 4. We cap claims at \$300,000¹¹ and add expected claims above \$300,000. We calculate the expected large claims using the method described in section 6.2.

We calculate a separate manual rate for Medicare Primary members using the paid claims PMPM from the BRV experience period, trended to calendar year 2022 using the Medicare Primary trends described in section 4.5 and the pharmacy contract adjustments described in section 4.2. We make no adjustments to the Medicare Primary manual rate for large claims.

¹¹ Selected using the current membership and the table in Exhibit 6B.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Calculation of the Manual Rate (Actives)			
Claim Type		Medical	Pharmacy
Experience Period		Jul 2019 – Feb 2020, Jun 2020 – Sep 2020	Nov 2020 – Oct 2021
Incurred and Paid Experience Paid Claims, capped at \$300,000	A	\$28,371,787	\$6,517,490
COVID-19 Related Claims	B	\$173,983	\$0
Estimated IBNR	C	\$214,803	\$864
Expected Claims above \$300,000	D	\$887,751	\$79,801
Deferred Care Adjustment	E	0.9852	1.000
Demographic Normalization	F	1.0035	1.0033
Overall Paid Trend Factor	G	1.1720	1.2766
Projected Total Paid Claims	$H = (A - B + C + D) \times E \times F \times G$	\$33,951,523	\$8,451,504
Total Member Months	I	69,304	69,209
Medical/Pharmacy Manual Rate	$J = H / I$	\$489.89	\$122.12
2022 Manual Rate	$K = J_1 + J_2$	\$612.01	
Q3 2020 Approved Manual Rate	L	\$591.46	
Manual Rate Increase	$M = K / L - 1$	3.5%	

Calculation of the Manual Rate (Medicare Primary)		
BRV Experience Paid Claims	A	\$33,985,860
Overall Paid Trend factor (5.2% for 36 months)	B_1	1.1651
Overall Paid Trend factor (7.9% for 12 months)	B_2	1.0786
Projected Total Paid Claims	$C = A \times B$	\$42,707,831
Total Member Months	D	94,703
2022 Manual Rate	$E = C / D$	\$450.97
Q3 2020 Approved Manual Rate	F	\$424.18
Manual Rate Increase	$M = K / L - 1$	6.3%

We use a different method of calculating the manual rate for active and Medicare Primary members. We develop the active manual rate from the experience of active members in the large groups covered by this filing. There are not enough Medicare Primary members in large groups to develop a credible manual rate with only large group experience, so we base the Medicare Primary manual rate on the larger set of claims in the BRV experience, which includes Medicare Primary members from ASO groups as well as large groups. Since we did not update the BRV experience, we apply the overall paid trend factor from the Q3 2020 filing for 36 months and the overall paid trend factor from this filing for 12 months to calculate the 2022 manual rate for Medicare Primary members, adjusted for differences in pharmacy contracts as described in section 4.2.

We adjust the manual rate to reflect a group's particular characteristics, as demonstrated in Exhibit 4A. We make an adjustment for the average age/gender factor (line B) of the group. For active and Medicare primary members, we use factors from the SOA's report *Health Care Costs – From Birth to*

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

*Death*¹². We normalize the factors such that the membership in the manual rate experience period has an age/gender factor of one. We assign an industry factor (line C) to each group based on the Standard Industrial Classification code. See Exhibit 4B for the schedule of industry factors. We normalize the industry factors such that the manual rate has a factor of one. We do not apply an industry adjustment to the manual rate for Medicare Primary members. The manual rate assumes the group is on the open specialty network. For groups electing the exclusive specialty network, we adjust the manual rate using the methodology described in section 5.4. We then multiply the manual rate by an adjustment factor to reflect structural changes between the experience period to the rating period. This adjustment modifies the manual claims to reflect such things as mandated benefit changes, contractual provision changes, etc., that, in the judgment of the underwriter, are necessary to make the manual rate appropriate for the estimation of the expected claims in the rating period.

For groups with a projection period other than calendar year 2022, we adjust the manual rate for trend to reflect the group's projection period (line D) and the additional impact of pharmacy contract changes (line E). Finally, we calculate a contract conversion factor (line F) based on member distribution and tier factors in order to convert from a PMPM to a single rate basis. This factor is necessary because the rating formula blends the adjusted manual rate (line S of Exhibit 1A) with the projected single contract rate (line R of Exhibit 1A), which is not on a PMPM basis.

6.2. Large Claims Factors

BCBSVT and TVHP use the formula and factors in Milliman's 2020 *Health Cost Guidelines – Reinsurance* to calculate expected claims above the pooling limit. The contents of the *Guidelines* are proprietary and confidential. This filing provides a general description of the formula but will not include any of the factors.

The formula develops expected claim costs above a particular pooling point separately for children and adults on a PMPM basis. The basis for each rate is a starting claim cost that varies with the pooling point and the out-of-pocket limit for the benefit. Milliman calculates the starting claim costs using national data, and the formula applies factors to adjust to our Vermont service area and the details of our contracts with local providers. The formula applies an adjustment for demographics and a trend factor to adjust the starting claim costs for the experience period of the renewal. There are also adjustments to the starting claim costs for the network of the benefit to account for claims from out-of-network providers, if appropriate for the benefit. The formula includes an adjustment factor that controls for known, ongoing high claimants, which are typically added to premium through underwriting judgment. To avoid double-counting such claimants, we apply a five percent reduction to the estimated claims above the pooling point based on recent BCBSVT and TVHP large group experience.

We multiply the adjusted adult and child claims rates by benefit by the number of adult and child member months in the experience for that benefit to develop the total expected claims above the pooling level.

¹² <https://www.soa.org/Research/Research-Projects/Health/research-health-care-birth-death.aspx>

The factors for the age curve are in Chart 1 (for actives) and Chart 21 (for Medicare Primary) of the databook linked on the page.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

6.3. Administrative Charges

The sources of administrative expense data in this filing are BCBSVT's data warehouse and accounting records. The experience period for this filing is January 2020 to November 2020. We use actual BCBSVT and TVHP administrative expenses for the experience period on a GAAP reporting basis.

Experience Base of Actual Expenses

BCBSVT's cost accounting system allocates administrative expenses to lines of business. We use BCBSVT insured large group and TVHP insured large group information for the base administrative charges.

We allocate the cost accounting data by cost center into cost categories for purposes of determining administrative charges for each specific group account, given that account's characteristics.¹³ The group cost categories align with the rules used in the cost allocation model. The group cost categories include:

Account – those expenses that the system allocates to specific group accounts on a per group account basis.

Member – those expenses that the system allocates on a per member basis.

Contract – those expenses that the system allocates on a per contract (subscriber) basis.

Medical Claims – those expenses that the system allocates on a per medical claim basis.

Invoice - those expenses that the system allocates on a per invoice basis.

Total Projected Claims – overhead expenses that we allocate using experience paid claims.

For each of the group cost categories described above, we tabulate the respective number of unit months during the experience period for BCBSVT and TVHP insured large groups. Groups can offer a choice of BCBSVT and TVHP products to their employees if they wish to offer options with different networks. We therefore combine expenses for both companies in this filing to ensure alignment of administrative expenses across the products within a group offering. The unit months include the number of account months, number of member months, number of contract months, and number of medical claims and invoices by month. For overhead expenses, we divide the experience administrative charges by experience paid claims to calculate a percent of claims factor.

The table below reflects reclassifications of the base data, including the removal of federal fees (we add these to premium rates separately; see section 6.9), GMCB billback (we add these to premium rates separately; see section 6.8), and fees paid to vendors for the administration of Health Savings Accounts and Health Reimbursement Accounts linked to our insurance products (participation in this service is optional; we assign these fees to groups who select the service). We also remove any expenses incurred due to one-time, non-recurring events, such as the expenses related to enabling full-time remote work, as these costs are not expected to continue to occur in the projection period. Finally, we adjusted the allocation of overhead among lines of business to reflect a consistent percentage of premium or premium equivalent, which is a more appropriate (i.e. lower, in the case of this filing) basis for pricing purposes.

¹³ Per unit per month costs for Cost Plus members with Medicare Supplement plans are set equal to the corresponding values for conventionally funded Medicare Supplement members.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Reconciliation of Experience Base Administrative Expense to Restated GAAP Expenses (dollars in thousands)					
Business Segment	Reported Expenses ¹⁴ (01/20 – 11/20)	Commissions ¹⁵	Reclassification Items ¹⁶	Reallocations	Adjusted Experience
	(A)	(B)	(C)	(D)	(E) = (A) – (B) – (C) – (D)
BCBSVT Insured	\$6,481	\$533	\$1,212	\$1,427	\$3,309
TVHP Insured	\$2,155	\$151	\$250	\$252	\$1,501
Large Group Subtotal	\$8,635	\$684	\$1,462	\$1,680	\$4,810

We calculate per unit per month (PUPM) values using the adjusted experience period administrative expenses and unit counts. For the group segments included in this filing, there are five such PUPM values and one percent of claims value.

Projection Factors

We project actual administrative costs PUPM from the experience period to each of the rating periods based on a 2.2 percent annual trend. This projection factor makes a reasonable but modest provision for increases in overall operating costs PUPM. There are no known extraordinary or mandate-related costs at this time which require a separate provision for the rating periods involved in this filing.

To calculate the annual trend increase we assume that personnel costs (wages and benefits) will increase by three percent, the typical budgeted wage increase, and we assume other operating costs will remain flat. Based on year-to-date November 2020 information, we calculate that 72.8 percent of our administrative costs are for salaries and benefits. We therefore increase our total projected administrative expenses by the weighted average of 2.2 percent per annum. We apply the trend increase through 2020, assume no trend for 2021, and apply trend from 2021 to 2022, which broadly aligns with the decision to forgo cost of living increases in 2021.

Development of Administrative Charges Trend		
		Percent of Total
Employee costs	A	55.4%
Purchased services	B	23.8%
Other operating costs	C	20.8%
Subtotal administrative expenses	D = A + B + C	100.0%
Total personnel costs	E = A / (A + C)	72.8%
Trend for personnel costs	F	3.0%
Total administrative charges trend	G = {(1+F) x E + (1.00) x (1-E)} - 1	2.2%

¹⁴ Reported Expenses are from Underwriting Results GAAP Basis, restated for the new allocation, for the Experience Base period.

¹⁵ Commissions are from Internal BCBSVT reports

¹⁶ Reclassification Items are from Internal BCBSVT reports, including the removal of one-time items

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

We anticipate an increase in total BCBSVT membership in 2022, but due to a loss of membership from 2020 to 2021, we expect that membership will have declined from the experience period to the projection period. This decrease in membership results in an increase in admin charges PMPM, as there are fewer members over which to spread fixed costs.

We calculate PMPM admin charges with experience period enrollment and projected 2022 enrollment. Using the lower 2022 enrollment increases the PMPM by 6.2 percent. A recent cost accounting exercise suggests that variable costs represent approximately 30 percent of total administrative expenses. BCBSVT is committed to providing insurance coverage for our members at the most affordable rates possible; as a result, even though it is impractical to react to enrollment shifts by immediately right-sizing staff, we nonetheless remove from our projection the entirety of variable costs associated with the reduced enrollment. We therefore apply a net increase of 4.4 percent to the base PUPM charges to account for the reduction in membership. The table below shows the calculation.

Development of Enterprise Membership Adjustment			
	Enterprise Admin Expenses	Members	Admin PMPM
Experience Period	\$67,551,300	174,250	\$35.24
Projected 2022 Enrollment		164,000	\$37.45
Elimination of 100% of variable costs for reduced enrollment			\$36.78
Adjustment for Enterprise Membership		\$36.78 / \$35.24 = 1.044	

Required Administrative Increase

Using the methodology described above, the administrative charges increase by 14.3 percent:

Administrative Charges – Reasons for Required Increase				
		Admin Charges PMPM	Change PMPM	Percent Change
1	Approved January 2021 admin from Q3 2020 filing	\$53.82		
2	Rebase experience and allocations	\$57.66	\$3.84	7.1%
3	Net enterprise membership adjustment	\$60.19	\$2.52	4.4%
4	Additional year of trend	\$61.50	\$1.31	2.2%
	Total Increase		\$7.68	14.3%

Charges for Group Accounts

Exhibit 5A shows the administrative charge PUPM values used by the rating formula to produce account-specific administrative charges. The formula applies these values to a group account's corresponding unit counts and expresses the resulting charges as an equivalent PMPM.

The administrative charges do not include amounts for special items or unique services not part of BCBSVT or TVHP's standard scope of administrative services (e.g., special booklets, certificates, or reports). Charges for such services will be determined and applied separately on an account-specific basis. The filed charges also do not include commissions based on the commission scale applicable to the account. The rating formula calculates and applies commissions separately.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

6.4. Net Cost of Reinsurance

BCBSVT and TVHP purchased reinsurance for claims in excess of \$1,000,000 for 2021, and we expect to purchase similar reinsurance in future years with limits approximately equal to the 2021 limit. We estimate that the target loss ratio for the reinsurance is approximately 75 percent, which implies a cost of reinsurance of approximately 33 percent of claims above the reinsurance limit. For each pricing period starting quarter, we use the total paid trend of 8.2 percent and a leverage factor for the \$1,000,000 reinsurance limit from Milliman’s 2020 *Health Cost Guidelines – Reinsurance* to calculate the expected annual claim cost above the reinsurance limit, then multiply the cost by 33 percent to determine the annual cost of reinsurance. We divide this by 12 to produce the PMPM cost of reinsurance. The table below shows these PMPM’s based on pricing period starting quarter. If a renewal requires a factor for a pricing period not in the table, identical data, assumptions, and methodology as described above will be used to calculate the net cost of reinsurance.

Pricing Period Starting Quarter						
Q3 2021	Q4 2021	Q1 2022	Q2 2022	Q3 2022	Q4 2022	Q1 2023
\$1.41	\$1.49	\$1.56	\$1.64	\$1.72	\$1.81	\$1.90

6.5. Pharmacy Rebates

We calculate pharmacy rebates by taking the experience period rebates and trending them using the total trend for brands eligible for rebates (see table below). We subject the trended rebates to the minimum guarantees for the rating period. There is a lag between the receipt of pharmacy rebates and the time of the original claims. For months in the experience for which we do not have detailed rebate information, we include an estimated rebate amount in the calculation.

Claim Type	Experience Period Allowed Charges	Projected Allowed Charges after Contract Changes
Brand Going Generic		
Brand		
Specialty		
Total		
Total Trend for Drugs Eligible for rebates	=	= 13.0%

6.6. OneCare Coordination Fee

BCBSVT and TVHP pay OneCare Vermont a care coordination fee for attributed members. This payment directly supports ACO providers, including community providers, as they deploy new care models. This model mirrors the investment Medicaid has made in the ACO provider network and supports the comprehensive care models being tested within the ACO program. The monthly charge for members attributed to OneCare is \$3.25. We will update this estimate if we receive additional information.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

6.7. Contribution to Reserve

As directed by management, we include the following contribution to reserve factors in the rate calculation:

Contribution to Reserve	
BCBSVT Insured Groups	1.5% of premium
TVHP Insured Groups	2.0% of premium
BCBSVT Cost Plus Groups	0.375% of equivalent premium

A memo from BCBSVT senior management regarding the contribution to reserve factors can be found as Attachment A. We consider the above-listed contribution to reserve factors to be sufficient in the long-term.

6.8. State Mandates and Assessments

Vermont Vaccine Purchasing Program Payments

The Vermont Vaccine Purchasing Program¹⁷ offers health care providers state-supplied vaccines at no charge by collecting payments from Health plans, insurers, and other payers. This assessment is a PMPM charge applied to members residing in Vermont who are ages 0 to 64. On May 1, 2020, the Vermont Vaccine Purchasing Program released a memo that included the anticipated rates for April 1, 2021 – March 31, 2022: *“For planning purposes, the best estimate at this time for the SFY2022 assessment rate is \$10.60 per child covered life per month and \$1.09 per adult covered life per month. The SFY2021 assessment rate will be reviewed for final determination in April 2021..”* We will update these rates once the actual rates are known.

New Hampshire Purchasing Program Payments

The New Hampshire Purchasing Program¹⁸ offers health care providers state-supplied vaccines at no charge by collecting payments from health plans, insurers, and other payers. The assessment for 2021 is \$6.25 for each child that is a New Hampshire resident. The current best estimate of the 2022 rate is \$6.25 per assessable life per month. We will use the new rate once it is approved.

New York State Health Care Reform Act

BCBSVT and TVHP pay the New York GME Covered Lives Assessment¹⁹ for all members who are New York residents as part of the New York State Health Care Reform Act. The assessment varies based on the county of residence. We will use the new rates once they are approved.

Maine Guaranteed Access Reinsurance Association

BCBSVT and TVHP pay the Maine Guaranteed Access Reinsurance Association Assessment²⁰. The 2019 assessment is \$4.00 per member per month for each member that is a Maine resident. We will use any new rates once they are approved.

²⁰ <http://www.mgara.org/>

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

Health Care Claims Tax

The Health Care Claims Tax of 0.999 percent applies to all claims or capitations incurred by members with Vermont zip codes. We use the percentage of current members with Vermont ZIP codes to estimate the percentage of rating period claims expected to be incurred by Vermont members. Act 73 of 2013 sunset the 0.199 percent assessment for the Health IT-Fund. Given this fee has routinely been extended close to its sunset date, we will include it in the calculation and update the charge if new information becomes available.

Blueprint

BCBSVT and TVHP participate in the Vermont Blueprint for Health program. The current assessments for this program, applied to members who are attributed to a Blueprint provider as of the month the renewal is produced, are \$2.77 PMPM for the Community Health Team and \$3.00 PMPM for the Patient Centered Medical Homes (PCMH). PCMH are eligible for up to \$0.50 for performance. We project that our total PMPM for PCMH will be \$3.20. We base the projected performance payment on the average payment for large groups in the year ended October 2020. We will incorporate any updates made to the Blueprint Manual²¹ in renewals.

Green Mountain Care Board Billback

The Green Mountain Care Board assesses BCBSVT and TVHP a billback. We apply billback amounts from the administrative charges experience period described in section 6.3 to projected member months to develop the charge of \$2.31 PMPM.

Other Assessments

We include other state mandates and assessments in the calculation as applicable.

6.9. Federal Assessments

Patient-Centered Outcomes Research Institute Fee:

This fee is part of the Affordable Care Act and applies to all plan years ended after September 30, 2012 and before October 1, 2029. We provide the estimated fees in the table below. We will update this estimate if we receive additional information.

PCORI	
Plan Year Ending Between	Fee Amount
October 2020 - September 2021	\$2.66 PMPY
October 2021 - September 2022	\$2.74 PMPY
October 2022 - September 2023	\$2.91 PMPY

Other Assessments

We include other federal mandates and assessments in the calculation as applicable.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

7. Factors applicable only to specific Products

7.1. Stop Loss Coverage for Cost Plus products

Cost Plus groups assume the risk for the claims incurred by their members. To protect themselves from high claims, they must purchase both Individual Stop Loss (ISL) and Aggregate Stop Loss (ASL) from BCBSVT²².

7.1.1. Individual Stop Loss

We develop ISL charges using the same formula and factors as described in section 6.2. We develop the charges for the rating period, rather than the experience period. They include a load for a 70 percent loss ratio. We use stacked tier factors to spread the charges across the different contract tiers, even when the benefit itself is aggregate, as the accumulation of the family cost sharing for the benefit does not have a meaningful impact on claims above the ISL attachment point.

7.1.2. Aggregate Stop Loss

The aggregate stop loss factors are unchanged from the Q3 2020 Large Group filing (BCVT-131835151).

8. Medical Loss Ratio Projection

We use the factors and formula in this filing to project a Medical Loss Ratio (MLR) for 2022. Using the manual rate as a proxy for projected claims, we project a 2022 MLR of 89.1 percent for BCBSVT and 87.7 percent for TVHP. The BCBSVT credibility-adjusted MLR for Large Group was 99.0 percent in 2018 and 95.3 percent in 2019. The TVHP credibility-adjusted MLR for Large Group was 104.3 percent in 2018 and 94.5 percent in 2019.

²² With the exception that with the approval of BCBSVT's Executive staff, Cost Plus groups can shop their stop loss in accordance with strict guidelines set forth by BCBSVT.

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

BCBSVT MLR			
(A)	Manual Rate	\$612.01	Exhibit 4A
(B)	Rebates	\$17.43	2019 MLR Filing, untrended

(K)	Subtotal	\$668.15	= (F) + (G) + (H) + (I) + (J)
(L)	Total Premium	\$686.01	= (K) / (1 - 0.011 - 0.015)
(M)	Commissions	\$7.57	= (L) x 1.1% (from 2019 MLR filing)
(N)	Contribution to Reserve	\$10.29	= (L) x 1.5% (from Actuarial Memorandum, Section 6.6)
(O)	MLR Denominator	\$686.01	= (L)
(P)	MLR	89.1%	= (E) / (O)

TVHP MLR			
(A)	Manual Rate	\$612.01	Exhibit 4A
(B)	Rebates	\$13.94	2019 MLR Filing, untrended
(C)	Estimated HCQ	\$3.27	2019 MLR Filing, untrended
(D)	State Mandates and Assessments	\$13.84	Calculation as described on Exhibit 1C, using latest actual PMPM as needed
(E)	MLR Numerator	\$615.18	= (A) – (B) + (C) + (D)
(F)	Projected Claims	\$611.91	= (A) – (B) + (D)
(G)	Net Cost of Reinsurance	\$1.56	Actuarial Memorandum, Section 6.4
(H)	Administrative Charge	\$55.62	Calculation as of January 2022, from Exhibit 5A
(I)	GMCB Billback	\$2.31	Actuarial Memorandum, section 6.8
(J)	Patient-Centered Outcomes Research Institute Fee	\$0.24	Actuarial Memorandum, section 6.9
(K)	Subtotal	\$671.64	= (F) + (G) + (H) + (I) + (J)
(L)	Total Premium	\$701.22	= (K) / (1 - 0.022 – 0.020)
(M)	Commissions	\$15.56	= (L) x 2.2% (from 2019 MLR filing)
(N)	Contribution to Reserve	\$14.02	= (L) x 2.0% (from Actuarial Memorandum, Section 6.6)
(O)	MLR Denominator	\$701.22	= (L)
(P)	MLR	87.7%	= (E) / (O)

The above calculations represent estimates assuming that all pricing assumptions hold true, and assuming no change from 2019 values for various quantities (e.g. rebates, commissions).

Blue Cross and Blue Shield of Vermont and The Vermont Health Plan
Q3 2021 Large Group Rating Program Filing
Actuarial Memorandum

9. Act 193 Information

The table below shows the year-over-year increase in plan spending and the percentage of the 2022 manual rate for generic, brand, and specialty drugs. We calculate the percent of 2022 manual rate as the experience drug claims (November 2019 – October 2020, paid through November 2020), trended to 2022 and adjusted to the pharmacy contract in force for 2022, divided by the 2022 manual rate of \$612.01 (from section 6.1). We calculate the year-over-year increase as the increase in drug spending from the experience period used in the 2021 renewals for the 2020Q3 filing (January 2019 – December 2019, paid through February 2020) to the experience period used for the 2022 renewals in this filing.

Drugs Processed Under the Pharmacy Benefit		
Type	Percent of 2022 Manual Rate	Increase in Plan Spending
Generic	2.0%	12.1%
Brand	7.2%	3.1%
Specialty	10.5%	-16.0%

The increase in drug spending compared to other premium components is below:

Premium Increases	
Component	Increase
Rx Claims	-6.1%
Medical Claims	5.1%
Non-Claims Components	-11.1%

Please see Attachment B for the specialty formulary as of 12/1/2020.

Drugs administered in an outpatient setting and covered by the medical benefit represent 8.6 percent of the 2022 manual rate. We trended drug claims covered by the medical benefit from the renewal experience period to 2022 and divided by the 2022 manual rate of \$612.01.

OptumRx will act as the pharmacy benefit manager (PBM) for BCBSVT’s Vermont Blue Rx pharmacy program beginning in July 2021. OptumRx will manage claims processed through the pharmacy benefit but not claims processed through the medical benefit for use in a facility.

10. Actuarial Opinion

I, Paul Schultz, Chief Actuary, am an employee of Blue Cross Blue Shield of Vermont and a member of the American Academy of Actuaries. I have experience in the area of insured health care programs.

Section 11 lists applicable limitations and disclosures.

It is my opinion that the rating formula and factors presented in this filing are reasonable and have been prepared in accordance with applicable Actuarial Standards of Practice. The formula and factors will produce premium rates that are reasonable in relation to the benefits provided and will not be excessive inadequate or unfairly discriminatory.

I am a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries, and I meet the Academy's Qualification Standards to render this opinion.

Paul A Schultz, F.S.A., M.A.A.A.

Actuarial Memorandum

11. Disclosures

Information Date: The analysis provided in the report is based on information as known on February 5, 2021.

Scope: The purpose of this filing is to establish the formula, manual rate, and accompanying factors that will be used for renewals of Blue Cross and Blue Shield of Vermont and The Vermont Health Plan large group plans. This filing is not intended to be used for other purposes.

Intended Users: This material has been prepared for the GMCB. BCBSVT understands that this memorandum and accompanying exhibits will be posted publicly.

Uncertainty or Risk: Future events may affect the results presented in the memorandum.

Reliance on Other Sources for Data and Other Information: This analysis relies upon data from the BCBSVT data warehouse. I have reviewed the data for reasonableness, but no audit was performed. This analysis relies upon several sources of information that are cited as footnotes at their respective references. If any of the sources we have relied upon are incorrect or inaccurate, it may affect the accuracy of the results presented in the report.

Subsequent Events: New information related to the COVID-19 pandemic continues to emerge on a regular basis. Subsequent events may affect the projected MLR presented herein. The degree to which future events may materially change the MLR is unknown. Notably, the filing does not include an assumption for additional claims expense due to ongoing COVID-19 vaccination on an annual basis. It remains uncertain whether the vaccines will require annual administration.

As of February 5, 2021, Vermont remains in a state of emergency regarding the COVID-19 pandemic. Given BCBSVT's previously communicated position of paying for pandemic-related costs through policyholder reserves, we would not include vaccine costs in the rate development even if emerging evidence demonstrates that an annual booster will be required.

Assumptions: Contribution to Reserves were set by BCBSVT management.

I HEREBY CERTIFY that I have reviewed the applicable filing requirements for this filing, and, to the best of my knowledge, the filing complies with all applicable statutory and regulatory provisions for the state of Vermont

Ruth Greene

Q3 2021 Large Group Rating Program Filing

Dear Mr. Crompton:

Attached for the Green Mountain Care Board's review and approval is Blue Cross and Blue Shield of Vermont's and The Vermont Health Plan's Q3 2021 Large Group Rating Program Filing. As directed by the Board, this filing combines the various factor filings for large group rating components (trend, large claims, benefit relativity, administrative fees and contribution to reserve, and the formula itself) into a single filing.

Please let me know if we can answer any questions or provide further information during your review.

Sincerely,

Ruth Greene  Digitally signed by Ruth Greene

Health Filing Form F-106

NAIC#: 95696 Transmittal Date: 02/10/2021

Company Name: The Vermont Health Plan

Address: PO Box 186

City, State, Zip: Montpelier, VT 05601-0186

Phone: () (802) 371-3450 Contact Person: Alison Partridge

Q3 2021 TVHP Large Group Rating Program Filing

Amends a previously filing, Departmental File No.:

Approval Date:

Type of Filing: Form(s) X Rate(s)

Completely and accurately identify this product filing. If one of the following categories does not describe the product filing, then add comments below (check all that apply):

- Accident Only, AD&D, Advertising, Blanket, Cancer Expense, Conversion, Critical Illness, Dental, Disability, Home Health Only, Hospital Indemnity, Limited Benefit, Long Term Care, Major Medical, Medicare Supplement, Miscellaneous, Nursing Home Only, Organ Transplant, Prescription Drug, Student/Athlete, Stop Loss/Excess Risk, Travel, Vision, Other (explain)

Comments: Health

MANDATORY - Filing Fee Information:

1. State of Domicile: Vermont

2. A: Filing fee for the Company's State of Domicile: 150.00

B: Amount of filing fee being submitted with this filing: 150.00

3. Is this fee based on state of domicile's retaliatory fee? Yes No X

4. Explain how each part of the fee was determined, show all calculations (use a separate sheet if necessary):

5. Fee calculated by: (Print Name) Jude Daye (Signature) Jude Daye

Failure to accurately and fully complete this form will result in the filing being rejected.

BLUE CROSS BLUE SHIELD OF VERMONT & THE VERMONT HEALTH PLAN
Q3 2021 LARGE GROUP RATING PROGRAM FILING
PLAIN LANGUAGE SUMMARY

Our mission and vision. Blue Cross and Blue Shield of Vermont (BCBSVT) is committed to giving our members access to high-value health care while responsibly managing healthcare costs. To that end, we seek to improve the health of Vermonters by promoting preventive care and healthy lifestyles. We use our strong care management program to assure better care for our members and avoid unnecessary costs. And we work with providers on strategies to improve health care services and reduce health care costs.

BCBSVT's vision is a transformed health care system in which every Vermonter has health care coverage, and receives timely, effective, affordable care. To achieve that vision, BCBSVT must be financially sound. That means we need to charge rates that cover the cost of providing health care to our members.

Rate request summary. BCBSVT and TVHP create large group premiums on a case-by-case basis. The rating process uses a formula that blends recent claims experience for each group with a manual rate. This filing establishes the rating formula, manual rate and factors that will be used to create large group renewals.

- There are an estimated 3,100 contracts (5,400 members) currently enrolled in one of 33 BCBSVT large group plans that will be affected by this filing.
- TVHP has an estimated 220 contracts (400 members) enrolled in three large group plans that will be affected by this filing.
- The formula and factors in this filing will produce a premium *decrease* of 0.6 percent for a group that is manually-rated using none of its own experience data.
- The result for any specific group may differ from a 0.6 percent decrease, depending on the group's own claims experience.

Reasons for the change in factors. The primary reasons for premium increases due to the change in factors is that the cost of providing health care to our members is increasing. Specifically:

- BCBSVT and TVHP are proposing a paid trend of 6.8 percent for medical claims, which includes hospital unit cost increases and anticipated changes in the use of services. The medical trend is driven primarily by large increases that were approved for Vermont hospitals in the most recent round of budget reviews.
- BCBSVT and TVHP are proposing a pharmacy trend of 11.6 percent. Increases in the cost and availability of high-cost "specialty" medications are the biggest driver of pharmacy trend.
- Premium increases caused by trend have been offset by recent changes to the formula to give more weight to a group's own experience, which resulted in improved retention of well-performing groups and a lower manual rate.

Other items also contribute to the change in factors, including:

- Due to increases in base administrative expenses, premiums went up 1.2 percent.
- The contribution to reserves established in this filing is required to maintain a level of policyholder reserves that is in compliance with that ordered by the Vermont Department of Financial Regulation.

Our efforts to reduce premium increases. We know that paying for health insurance is a struggle for many, and we strive to keep premiums as low as possible. The proposed factors reflect our efforts to reduce rate increases, including launching Vermont Blue Rx, an innovative prescription drug benefit

BLUE CROSS BLUE SHIELD OF VERMONT & THE VERMONT HEALTH PLAN
Q3 2021 LARGE GROUP RATING PROGRAM FILING
PLAIN LANGUAGE SUMMARY

service that will improve the consumer experience, drive better health outcomes and lower costs for members, providers, and employers.

Our experience in this market. Over the past five years, BCBSVT has lost over \$20 million on this line of business. BCBSVT has not included any additional contribution to member reserves to offset this loss.

Our health care system must be adequately funded to keep it strong and accessible. Since the factors that determine premiums are primarily the cost and utilization of health care, we believe that there is no way to further reduce the filed factors without underfunding the health care coverage on which Vermonters rely.

Public comment. Members of the public can submit comments to the Green Mountain Care Board about this rate request . For more information, please visit the Board’s Public Comment page: https://ratereview.vermont.gov/public_comment

1. The **Rx OOPM** Limit is as described in Vermont Act 171.
2. **Wellness Rx**: if applicable, cost sharing rules apply *before* the deductible is satisfied.
The member's cost share for **Wellness Rx** accumulates toward the Out-of-Pocket Maximum.
3. **All other drugs** are subject to deductible. Once the deductible is met, drugs are subject to the **Drugs After Deductible** cost share until the Out-of-Pocket Maximum is met.

2	CDHP	\$3,500	0%	\$3,500	\$1,400	0%	N/A	SAAO	0.8405
3	CDHP	\$5,000	0%	\$5,000	\$1,400	N/A	\$5/\$20/\$40	SAAO	0.6985

1. The **Rx OOPM** Limit is as described in Vermont Act 171.

2. **Wellness Rx**: if applicable, cost sharing rules apply *before* the deductible is satisfied.

The member's cost share for **Wellness Rx** accumulates toward the Out-of-Pocket Maximum.

3. **All other drugs** are subject to deductible. Once the deductible is met, drugs are subject to the **Drugs After Deductible** cost share until the Out-of-Pocket Maximum is met.

MEMORANDUM

To: Paul Schultz, Chief Actuary

From: Ruth Greene, VP and CFO

Date: February 9, 2021

Subject: Administrative Charges and Contribution to Policyholder Reserves for Q3 2021 Large Group Rating Program Filings

Upon consideration of the points documented in this memorandum, I am directing you to file as follows for the Q3 2021 BCBSVT and TVHP Large Group Rating Program Filings and the 2022 Association Health Plan Filing:

1. A contribution to policyholder reserves (CTR) of 1.5 percent for BCBSVT insured groups, 2.0 percent for TVHP insured groups, and 0.375 percent for Cost Plus groups; and
2. Exclude from the filing any explicit claims costs related to the COVID-19 pandemic.

Overall CTR Philosophy

BCBSVT holds that a long-term CTR of 1.5 percent represents an adequate, yet not excessive, contribution to policyholder reserves. CTR at this level within a typical trend and growth environment allows us to navigate short-term fluctuations in order to maintain surplus levels that are within our established, modest target range.

BCBSVT believes that CTR should be managed to an adequate long-term level rather than fluctuating significantly from year to year with changes in membership and health care cost trend. For this reason, we file a CTR equal to our long-term target. It is our expectation that our future filings will also include contribution to policyholder reserves equal to this target. While the long-term CTR target may exceed or fall below that required to maintain our surplus position in any given year, maintaining an adequate long-term assumption will allow the market to avoid rate shocks in years of high growth in projected claims costs.

The impact of the ongoing pandemic on financial results is one example of a short-term fluctuation. In order to remain in the target range and provide stability to its policyholders, BCBSVT's CTR philosophy looks beyond a single year of experience to establish the required levels.

Should the outlook for BCBSVT's surplus level fail to fall within our target range, we would adjust our filed CTR accordingly. That is, in the event that surplus is projected to materially exceed our targeted range, we would reduce our filed CTR from the long-term rate, all else being equal. Similarly, in the

absence of mitigating factors, we would file a CTR that exceeds the long-term rate should surplus project to fall materially below our target range.

Adequately funded premiums are the foundation of solvency, the most important element of consumer protection. An adequate long-term contribution to policyholder reserves should exceed the minimum required to keep pace with increases in total claims costs. While best estimate assumptions are by definition expected to lead to equal likelihood of gains and losses, unexpected events or periods of sustained losses may lead to financial deterioration of sufficient magnitude to threaten a company's solvency.

Apart from modest investment income, CTR is the only source of funding that sustains policyholder reserves for BCBSVT. While any rating program filing is by definition an estimate of future costs and is therefore subject to gains or losses, BCBSVT files no additional margin beyond the required CTR. Any rate shortfall will first be paid out of CTR, while any shortfall beyond the approved CTR for a particular filing will be funded from existing policyholder reserves (i.e. surplus).

Maintaining an adequate surplus level is critical for any insurer. Consequences of low surplus include reduced flexibility in responding to customer needs (for instance, a restricted ability to give payment flexibility to customers during an economic crisis), a need for higher margins in rates in order to avoid further deterioration, and a reduced ability to attract or retain business or to support membership growth. Stability is particularly important in times of change, including the continuing evolution at both the federal and Vermont levels of the individual and small group market, the health care reform environment in Vermont, and the ongoing COVID-19 crisis.

BCBSVT must remain financially strong in order to continue to provide Vermonters with access to high quality care, outstanding member experiences, and responsible cost management. Realizing a sustainable CTR over time is key to achieving that goal.

Risk Based Capital Outlook

On February 7, 2019, the Commissioner of the Vermont Department of Financial Regulation (DFR) issued an order approving a target Risk Based Capital (RBC) range of 590 percent to 745 percent. The order states, in part:

“If BCBSVT’s RBC ratio falls below or increases above the approved range, BCBSVT shall promptly develop a plan to move within the range within a reasonable time and shall submit such plan to the Commissioner.”

BCBSVT’s RBC outlook is materially impacted by two outstanding, one-time receivable items that are not admitted as assets under statutory accounting rules.

First, as a result of the Tax Cuts and Jobs Act enacted in late 2017, BCBSVT’s alternative minimum tax (AMT) credit balance continues to be returned by the IRS. The CARES Act of 2020 included provisions for accelerating the timing of the outstanding AMT refund. BCBSVT expects to receive a final payment of the full remaining balance of the AMT credit by Q2 of 2021. Assuming that the credits are refunded to BCBSVT in accordance with the provisions set out in the Tax Cuts and Jobs Act and the CARES Act, these funds will be used for the direct benefit of our customers as they are received from the IRS.

Second, BCBSVT has retained counsel to sue the federal government to recover the unpaid 2017 and 2018 CSR funding. This lawsuit has been decided in our favor, but the speed to recovery has yet to be determined. The federal government currently has 5 months to decide on next steps, meaning that resolution of this payment may linger into late 2021.

With the addition of the above receivable items, BCBSVT expects to be just below the target RBC range by the end of 2021. We note that, all else being equal, it is better to be near the middle of the target RBC range rather than at an end point, as this minimizes the probability of falling out of the range and triggering a required corrective market action¹.

We do not intend to waver from our CTR philosophy while within the target range, which will generally have the effect of very modestly increasing RBC when near the low end of the target range and very modestly decreasing RBC when approaching the high end of the target range. BCBSVT expects to be sufficiently close to the bottom end of its mandated RBC range by year-end 2021 to be comfortable holding to a long-term approach to CTR.

Finally, the Tax Cuts and Jobs Act also resulted in the BCBSVT legal entity being no longer subject to federal income taxes (note that BCBSVT subsidiaries continue to be taxable). The savings resulting from the elimination of BCBSVT's annual federal tax obligation have been passed on directly to our customers in premium rates through the reduction of our long-term CTR to 1.5 percent from its historical level of 2.0 percent².

COVID-19

During this difficult time, BCBSVT's primary responsibility to Vermonters is to maintain continuity of coverage and claims payments for the duration of the COVID-19 crisis. This understanding necessitates that we continue to rate appropriately so that we can provide flexibility to customers and providers who are struggling financially.

As explored in our 2021 individual and small group filing, BCBSVT has long maintained that a pandemic is one reason to hold surplus. Given that the designed function of policyholder reserves is to weather the types of uncertainties created by a pandemic without resorting to extreme rate fluctuations, any increased cost in 2021 and 2022 due explicitly to the COVID-19 pandemic will be funded through policyholder reserves. Specifically, we do not intend to pass ongoing vaccine costs through to policyholders in 2022. Said differently, I am comfortable that the filed CTR of 1.5 percent will yield our targeted financial outcome in the event that the COVID-19 pandemic is responsible for 2022 claims increases beyond those projected in the filing.

Conclusion

In consideration of all the above, I direct you to file a 1.5 percent CTR for the Q3 2021 BCBSVT Large Group Rating Program Filing and the 2022 Association Health Plan Filing, to file a 2.0 percent CTR for the Q3 2021 TVHP Large Group Rating Program Filing, to file a 0.375 percent CTR for Cost Plus business, and to exclude direct COVID-19 costs from claims projections.

¹ The Axene Health Partners RBC study indicates that the point within the target RBC range from which it is least likely to fall outside the range within a one-year period is 690 percent.

² Because TVHP remains taxable at the federal level, its long-term CTR target is 2 percent.

March 4, 2021

Mr. Kevin Ruggeberg, FSA, MAAA
Vice President & Consulting Actuary
Consulting Actuary

**Subject: Your 2/23/2021 Questions re: Blue Cross and Blue Shield of Vermont
3Q 2021 Large Group Rating Program Filing (SERFF Tracking #: BCVT-132713612) and
re: The Vermont Health Plan 3Q 2021 Large Group Rating Program Filing (SERFF Tracking #: BCVT-
132713919)**

Dear Mr. Kevin Ruggeberg:

In response to your request dated February 23, 2021, here are *your questions* and our answers

- 1) *Clarify if and how the Medicare Primary manual rate increase is incorporated in the "Impact of Formula and Factor Changes" table in the actuarial memorandum.*

The 'Impact of Formula and Factor Changes' includes the impact of both the active and Medicare Primary manual rate increase. We developed the impact of formula and factors changes using the current groups in the block of business, so the extent to which the existing groups offer Medicare Primary coverage determines the degree to which each manual rate is incorporated into the total increase. Medicare Primary membership is approximately one percent of membership in this filing.

- 2) *Explain why the MLR calculation in the actuarial memorandum assumes that various quantities, such as rebates, will be unchanged and untrended from 2019, despite some of these values being assumed to have changed elsewhere in the filing.*

We provided the MLR calculation in a manner that was consistent with previous filings. However, we agree that the use of the estimated rebates underlying the rate change in section 2.3 to be more indicative of the anticipated MLR in the projection period. The other item in the MLR calculation that comes directly from the 2019 MLR filing is the HCQ expenses, which we consider to be a reasonable proxy for the 2022 HCQ expenses.

Please see the attached file *Response to Q3 2021 LG Filing 02.23.2021 Inquiry – Q2.xlsx* for updated versions of the BCBSVT and TVHP MLR calculations.

- 3) *Regarding the deferred care adjustments provided in Exhibit 6E and used in Exhibits 1A and 1B:*
 - a) *Provide more detail about how these factors were developed, including any implicit trend level incorporated in the calculation.*

These factors are based on modeling recently performed for DFR. Please see the attached file *Response to Q3 2021 LG Filing 02.23.2021 Inquiry – Q3.pdf* for the actuarial report that describes the modeling in detail.

b) *The sample calculation shown in Exhibit 1B shows a simple average of the 12 monthly factors applicable to the experience period. By L&E’s estimation, this would typically result in an overstatement of about 4% to incurred claims. This is because the highest inverse factors are applicable to the months with the lowest claims, and vice versa. Please confirm the precise manner in which this adjustment will be calculated for particular groups.*

We apply the factors on a monthly basis to calculate the experience adjustment factor. Please see the attached file *Response to Q3 2021 LG Filing 02.23.2021 Inquiry – Q3.xlsx* for a precise illustrative demonstration of the calculation of the factor. The monthly application of the factors to claims, rather than using a simple average, ensures that incurred claims are not overstated.

4) *Explain why clinical guidance of a 5% increase from new drugs in the future should be applied to the historical trend, which presumably already includes past new drugs of a similar magnitude*

Pharmaceuticals dispensed in a medical setting feature a number of challenges when setting future trends. These claims are often high-cost and low-frequency and the advent of a new drug in this class may cause a significant escalation of trend in a given year. For example, in the year ended February 2019, this class of drug experienced an annual trend of 15.5 percent, which was higher the approved Q3 2020 filing trend of 11.3 percent. The lower trend experienced from 201902 to 202002 is the result of the leveling off in utilization of certain drugs that were first available in 2017 or 2018, as the initial pent-up demand for these medications became part of the entire trend experience period. The additional 5 percent is to account for new drugs, such as Ocrelizumab, which are not included in the baseline. Many of the newly developed specialty drugs are now dispensed through the medical benefit and their impact can vary widely. As shown in the table below, the most recent year over year total trend included a smaller-than-historical impact of pipeline drugs.

Impact of Pipeline			
Type	201802	201902	202002
Trend without Pipeline	-0.7%	6.4%	5.0%
Trend with Pipeline	5.4%	15.5%	8.4%
Impact of Pipeline	6.0%	8.5%	3.2%

In summary, a long-term view for this class is necessary due to the substantial year-to-year variations in annual trends caused by the introduction of new, high-cost drug therapies.

5) *Provide more detail on how Exhibit 2G is used. For example, the factors for Rx claims from March 2017 and April 2017 and 1.000 and 0.8863, respectively. Does this imply that claims from April are trended by an additional 13% over claims in March?*

We average the factors in Exhibit 2G based on the months in each respective experience period. The ratio of the average of the most recent experience period over the average of each preceding experience calculates the prior experience trend. Please see the attached file *Response to Q3 2021*

LG Filing 02.23.2021 Inquiry – Q5.xlsx for an illustrative demonstration of the calculation of the prior period trend factors.

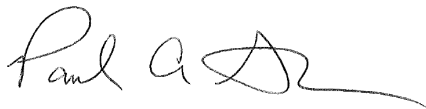

6) *Please list all rating variables which vary between the TVHP and BCBSVT*

There are two rating variables that vary:

- Medical Unit Cost: For marketing reasons, provider contracting negotiates different unit cost increases for the BCBSVT Managed, BCBSVT Non-Managed, and TVHP Managed contracts.
- Contribution to Reserve (CTR): The BCBSVT Insured Group CTR factor is 1.5 percent of premium. Because TVHP remains taxable at the federal level, its long-term CTR target is 2 percent.

Please let us know if you have any further questions, or if we can provide additional clarity on any of the items above.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul A. Schultz", with a long, sweeping horizontal stroke extending to the right.

Paul A. Schultz, F.S.A., M.A.A.A.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

Purpose

The COVID-19 pandemic has introduced significant uncertainty into the anticipated level of claim costs. In the spring of 2020, stay at home orders resulted in a significant drop in claims volume. Over subsequent months, a return of deferred care increased utilization above expected levels, while infection rates remained low through the summer before spiking in late autumn. Looking forward, there are uncertain impacts around the ongoing level of infection, the availability and cost of a vaccine, and the degree to which deferred or foregone care will lead to increased population morbidity, among many other uncertainties.

To examine the possible variance in paid claims in 2020, 2021, and 2022 BCBSVT has created a model that simulates paid claims under varying scenarios for directly-written insured lines of business¹. The model and results are intended to quantify the impact varying scenarios have on BCBSVT's performance by line of business, projected net income and risk based capital ratio (RBC). It should not be used for any other purpose.

Not included in this modeling are a number of additional operational costs incurred by BCBSVT related to the COVID-19 pandemic. BCBSVT has implemented programming to enhance access to and affordability of retail pharmaceuticals during the crisis, extended grace periods and offered premium flexibility to customers, cancelled the recoupment of certain overpayments to providers, waived any deductible amounts applying to generic wellness drugs and insulins and temporarily suspended claims audit activity.

This modeling is specific to claims costs directly related to COVID-19, along with the deferral of medical care due to the economic shutdown and that care's eventual (partial) return. We specifically note the exclusion of retail pharmacy from this modeling².

This model does not project ongoing COVID-19 illness beyond the end of Calendar Year (CY) 2022. Neither does it attempt to quantify the financial impact of long-term health complications that have been noted among individuals who have contracted and recovered from COVID-19.

Data

The model and its inputs rely on several sources of information. We use as a baseline projected claims, trend, actuarial value, and membership information presented in or underlying the BCBSVT 2021 Vermont Individual and Small Group Rate Filing (BCVT-132371410), the BCBSVT and TVHP Q3 2020 Large Group Rating Program Filing (BCVT-132350241 & BCVT-132350492), the 2021 TVHP Medigap Blue Rate Filing (BCVT-132559586), and the 2021 BCBSVT Medicare Supplement Rate Filing (BCVT-132570622). The large group filings do not project membership, so for these lines of business we use membership from

¹ These include the Vermont Individual and Small Group (VISG) merged market, BCBSVT insured large groups, TVHP insured large groups, BCBSVT Medicare Supplement products, and TVHP Medicare Supplement products.

² Patterns of retail pharmacy utilization were impacted by the pandemic (e.g. an unusually large number of 90-day scripts were filled in late March) but the overall level of utilization was not materially impacted.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

internal reporting as of November 30, 2020 to approximate 2020, 2021, and 2022 membership. We include direct COVID-related costs incurred in February through October 2020 and paid through November 30, 2020 from BCBSVT's data warehouse.

To calculate the level of deferred care, we use claims incurred from January 2019 through September 2020 for all BCBSVT members. We apply completion factors developed from the monthly financial reporting process (best estimates before margin and before blending with trended estimates). Shelter in place restrictions were put in place in March 2020; therefore, the slowdown period was defined as the incurred period from March 2020 through May 2020. Beginning in June, utilization levels can be observed to have returned to levels that surpass trended pre-pandemic benchmarks across the BCBSVT book of business. This slowdown period was quantified by comparing the PMPM of the slowdown period relative to a benchmark PMPM. We calculate the level of deferred care separately for Medicare Supplement members. For more detail, please refer to the *Deferred Care* section.

Methodology

Baseline Claims

Given that the timing of the deferred and returning care (see subsequent sections) is variable on a monthly basis, we convert the claim totals included in the 2021 filings to monthly totals.

To estimate VISG claims, we start with the 2021 projected allowed medical and pharmacy claims from the 2021 VISG filing. We apply paid claim seasonality factors developed as part of the monthly reserving process. We then calculate a monthly allowed trend for medical and pharmacy claims using the approved allowed trend factors. Lastly, we set the starting trend for January 2020 such that the total projected allowed claims equals the figure presented in Exhibit 5 of the filing. Finally, we apply the 2021 actuarial value³ to convert from allowed claims to paid claims.

To estimate the insured large group claims, we start with the approved manual rate in the Q3 2020 BCBSVT/TVHP Large Group filing. The manual rate represents an estimated paid claim amount for the 12-month period starting January 1, 2021. We then divide by the effective actuarial value underlying the Q3 2020 benefit relativity model to convert the manual rate to an allowed claim total. Then, we split medical and pharmacy claims using the proportion of each comprising the manual rate. We then apply paid claim seasonality factors developed as part of the reserving process and convert the annual allowed medical and pharmacy trend in the filing to monthly factors. We set the starting trend for January 2021 such that the total projected allowed claims per member for the year equals the allowed manual rate. We then apply the average actuarial value to convert the allowed claims back to paid claims.

³ We used the actuarial value calculated using BCBSVT population from column L of exhibit 6E of the 2021 VISG rate filing.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

To estimate Medicare Supplement claims, we start with the 2021 projected medical claims from the 2021 BCBSVT Medicare Supplement and 2021 TVHP Medigap Blue filings. We apply paid claim seasonality factors developed as part of the monthly reserving process. We then calculate a monthly allowed trend for medical claims using the approved allowed trend factors. We set the starting monthly claims so that the annual claims are equal to the totals presented in the filing.

Deferred Care

Using the period identified in the *Data* section, we create the following graphs showing the total monthly PMPMs spanning over the benchmark and slowdown periods. We calculate the benchmark PMPM as the monthly average PMPM less the monthly standard deviation PMPM divided by the square root of three in order to ensure that we are isolating the deferred services from normal fluctuations. We calculate benchmarks separately for Medicare Supplement members. We apply a seasonal adjustment to the Medicare Supplement benchmark due to the significant monthly seasonality pattern present.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

We further subdivided our total claims by service category to make determinations about the percentage of claims in our slowdown period that are likely to be rescheduled rather than foregone. We also made assumptions about changes in demand that certain claim categories are likely to experience in the future due to temporary or more lasting changes to the care delivery system expected to result from the pandemic.

We use place of service, DRG, ICD-10 procedure code, CPT/HCPCS, revenue code and ICD-10 diagnosis code to bucket the total claims into 33 sub-categories we considered in estimating the impact of deferred services. A table displaying the assumptions for each of the 33 categories can be found in Appendix E.

BCBSVT actuaries worked closely with BCBSVT medical directors to develop assumptions for the return of care for each service category.

Mental health services apart from inpatient stays can be observed to exceed the benchmark, presumably due to the availability of telehealth options as well as the increased stress the pandemic and economic disruption have inflicted upon our members. While there was a slowdown in inpatient mental health admissions, we assume that this was representative of a change in site of care rather than an indication of pent-up demand.

Medical-drug services (such as injections), durable medical equipment and services at a home health & hospice locations experienced very little or no slowdown; we assume that the limited amount of care that did not take place can be foregone completely or has been resolved using other methods of care. Emergency and urgent care experienced a significant percent slowdown in services during the spring of 2020 but have since rebounded. We expect these services to not return because any emergent event that occurred during March to May has been handled in other ways. We assumed that influenza and pneumonia-based claims will

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

not be made up because they are seasonal and do not result in pent-up demand. Newborns and delivery/pregnancy care for mothers cannot be deferred or made up for obvious reasons.

Rescheduling of laboratory, radiology and evaluation and management services depends on whether the service was for chronic care or acute care. We assumed that 100 percent of chronic services will be made up while any acute care that did not take place in the slowdown period has been foregone⁴. We also assumed that any oncology treatment or immunization services that were deferred during the lockdown will be made up fully due to the necessary but deferrable nature of this care.

All surgeries had relatively significant slowdowns during the period. We project that all of these services will be made up due to the necessity of this care. We note that various Vermont hospitals and surgical centers have expanded their hours to contend with the glut of services.

Overall, we estimate that 50.3 percent of the services that were deferred during the slowdown period have been or will be made up. For Medicare Supplement members, we estimate 45.2 percent of deferred services will return. This can be calculated by taking the weighted average of the 'percent rescheduled services' and 'slowdown PMPM' from the table by type of service provided in Appendix E.

We note the independent BCBSVT analysis is closely aligned with industry sources^{5,6}, which lends additional confidence to our assumption.

In any month where services are less than 100 percent of our non-COVID expectation, it is assumed that a mean of 50.3 percent of the claims will return at a later date (a mean of 45.2 percent for Medicare Supplement members). This includes any months during a subsequent increased period of infection where non-emergent care is deferred such that claims are less than expected. In the stochastic model, we assume the level of deferred care is normally distributed with above-referenced means and a standard deviation of one-tenth the mean. This standard deviation allows for a reasonable range of results around our best estimate, roughly equivalent to the "high" and "low" estimates within the above-referenced Milliman white paper.

⁴ While it is unlikely that literally every deferred service in this category will return, the difference between using 100 percent and a figure as low as 90 percent is immaterial to the modeling results. The expectation is that the vast majority of services for the management of chronic disease has been or will be rescheduled. Similarly, it is unlikely that every service we categorized as "acute" will be foregone, but using an assumption of, say, 5 percent has no material impact on results.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

Returning Care

The timing of the return of care is dependent on the capacity of the health care system. We use emerging experience to estimate the expanded capacity of the health care system. We assume a total maximum capacity range of 104 to 108 percent.

To model the return of care, we randomly generate capacity factors to apply for each month from October 2020 through December 2022. The capacity in a given month is not allowed to exceed the maximum noted above. We also estimate the potential cost of subsequent restrictions on access to non-emergent medical care. Subsequent periods of more severe economic restrictions would pose a great challenge for Vermonters, Vermont health care providers and Vermont small businesses. The decision to issue further rounds of shelter-in-place orders and/or similar restrictions will not be made lightly.

Massachusetts announced on December 7, 2020 that hospitals would begin limiting elective surgeries⁷. New York also recently limited elective surgeries in Erie County⁸. The case incidence in Massachusetts and Erie County, NY was approximately 600 cases per million at the time these restrictions were put in place, which we use as the level where Vermont once again implements restrictions on access to medical care.

In the month following the conclusion of a period of restricted access to health care, the factors are dampened to reflect the deferral of care. In the second month following a period of restricted access, we apply the additive factors to account for the return of services. We also apply dampening factors that eventually revert care to 100 percent of the benchmark to reflect that the health care system likely cannot operate at maximum capacity for an extended duration. We include an additive term that helps prevent the dampening factors from returning the maximum capacity to 100 percent before returning care reaches the percentage randomly selected for the simulation. Lastly, we end any excess capacity upon reaching the modeled percent of care returning.

Capacity Factors	Provider Max	Period of Restricted Access to Care
Low	104%	85%
High	108%	95%

See Appendix F for a sample of capacity distributions randomly generated by these mechanics.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

Changes in Demand

The 'Stay Home, Stay Safe' order changed the way many Vermonters access care. BCBSVT actuarial staff again worked with medical directors to make assumptions about persistent changes in utilization resulting from the pandemic and economic crisis.

We expect physical therapy, chiropractic services, ambulance, and influenza and pneumonia services will continue to remain dampened until a vaccine is available. The first two categories are largely attributable to patients seeking non-emergent services less actively during the pandemic, while the final two stem from lower rates of infection that result from social distancing protocols. Ambulance services are likely dampened due to fewer transportation accidents and activity-related injuries.

As noted above, non-inpatient mental health services are being utilized at higher than historical levels, presumably due to the availability of telehealth options as well as the increased stress the pandemic and economic disruption have inflicted upon our members. Across our book of business, we have observed a 14 percent increase during the slowdown period in the allowed charge PMPM for non-inpatient mental health services. We assume that the increase represents the new norm through 2022. We assumed that inpatient mental health admissions will resume at a higher level due to the fallout from the extreme stress of the pandemic, lockdown, economic crisis and social unrest. There is evidence of an increase in PTSD in the aftermath of such events. The literature notes a possible uptick of as much as 7 percent in MHSA services after a catastrophic event⁹; we use this figure—half of the observed non-inpatient increase—as an ongoing increase in inpatient MHSA utilization.

Previous iterations of the modeling assumed a reduction in future emergency and urgent care services due to the anticipated acceptance of telehealth services as a viable alternative. As noted in the *Deferred Care* section, emergency and urgent care have returned to their baseline levels following the slowdown in services during the spring of 2020. On the basis of this evidence, we do not include any ongoing reduction in these services from baseline levels.

The weighted average of the "Future Demand %" and "Benchmark PMPM" columns in the table below yields a \$0.50 increase in allowed PMPM preceding vaccine availability and a \$2.42 increase in allowed PMPM following vaccine availability. We use these figures as the change in ongoing demand. For Medicare Supplement members, the respective changes are a \$0.75 PMPM decrease and a \$0.27 PMPM increase. We treat these as best estimate assumptions and do not allow them to vary within the stochastic modeling.

** Future demand reverts to baseline levels following vaccine availability.

Deferred Care Morbidity Impact

As outlined above, a broad spectrum of medical services experienced a decline during the spring. While we anticipate many of these services will be deferred to a later date, many will not occur at all. The cancellation and delay of services has created public health impacts¹⁰, and similar events that have impaired access to care have increased population morbidity¹¹.

The health impacts created by the limited access to care in the spring of 2020 are unknown. Catastrophic events have a documented long-term impact on population morbidity. Given the long-term nature of the current health and economic crises, we consider it important to model possible morbidity effects created by the lack of access to care during periods of significant government restrictions. We set the stochastic model to randomly generate a morbidity factor uniformly distributed between 1.000 and 1.005 that is applied to projected medical and pharmacy claims.

Treatment Costs

To estimate treatment costs, we first develop an incidence rate. We use the SOA's "A Tool for Tabulating Johns Hopkins University's Coronavirus Database"¹² and data from the COVID Tracking Project¹³ to collate cases on a daily basis for Vermont. We then calculate a weekly average incidence from April 1, 2020 through December 8, 2020.

¹⁰ <https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/COVID-19/ResumingCalifornia%E2%80%99sDeferredandPreventiveHealthCare.aspx>

¹¹ <https://www.washingtonpost.com/opinions/2020/04/08/covid-19-pandemic-will-end-americas-next-health-crisis-is-already-starting/>

¹² <https://www.soa.org/globalassets/assets/files/resources/research-report/2020/tabulating-coronavirus-database.xlsm>, accessed November 16, 2020

¹³ <https://covidtracking.com/data/state/vermont/cases/>, accessed December 9, 2020.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

Next, we fit a time series to the historical data. The formula we use to project the weekly case rate is as follows:

$$\text{Estimated cases}_t = ((\alpha * \text{Actual cases}_{t-1} \div \text{Seasonal factor}_{t-1} + (1 - \alpha) * (\text{Estimated cases}_{t-1} + \beta_{t-1}) + \beta_t) * \text{Seasonal factor}_t$$

First, we develop the seasonal factors. Other coronaviruses have exhibited a seasonal pattern, where the case prevalence increases in winter months¹⁴. To model the variation in seasonal incidence, we use a sine wave with a peak set in January and February, and a trough in July and August. We set the amplitude at 0.5, which corresponds to an approximate 3:1 ratio of prevalence in peak months versus trough months. We use the resulting factors as the seasonal factors in the above time series equation.

Next, we set alpha as 0.6. This factor represents the degree to which the estimated claims for the current week are based on the prior week's claims, prior to seasonality. This selection balances the high correlation of cases from week-to-week, but still allows for cases to vary due to other factors.

The remaining portion of the incidence rate, beta, is set as the sum of a social distancing trend factor and a seasonal trend factor. The social distancing trend factor is based on the approximate level of restrictions in effect, which is based on the average case rate in the preceding four weeks. The factor for lowest social distancing level, which is analogous to the period in the summer where limited interstate travel was allowed, randomly varies between 0 and 1. The second level of distancing corresponds to a level of social distancing where interstate travel is restricted and there are moderate limits on gatherings. The third level of distancing corresponds to a status where in-person schooling is limited and there are strict restrictions on gatherings and traveling. The fourth level of social distancing is most restrictive, corresponding to a partial economic shutdown and deferral of non-emergent medical services. For historical weeks, we apply the level based on the approximate level of restrictions in effect and apply the average of the low and high factors in the table below.

Social Distancing Factor			
Social Distancing Level	Low Factor	High Factor	Incidence Start (Cases per million)
4	-30%	-10%	600
3	-3	-1	75
2	-1	0	25
1	0	1	0

¹⁴ <https://www.frontiersin.org/articles/10.3389/fpubh.2020.567184/full>, accessed November 5, 2020.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

The seasonal trend factors adjust for cases escalating or decreasing based on the slope of the seasonal pattern. This factor is calculated as follows:

$$\text{Seasonal trend factor } t = ((\text{Seasonal factor}_t \div \text{Seasonal factor}_{t-1}) - 1) * \text{Actual cases}_{t-1}$$

To project future cases we substitute estimated cases for actual cases in the formulas above. Through the week ended December 8, 2020, estimated cases generally fell within 30 percent of actual cases. In the projection of future cases, we include an additional variable in the beta factor that varies by 30 percent from the previous week's cases to account for the random variation in case pattern.

Additionally, four weeks have seen the actual case rate at least double over the prior week's level. Each of these weeks included a specific event in Vermont that gave rise to a spike in cases. To model the potential of a "super-spreader" event, we include a random variable that overrides the time series. This variable is set to occur at a 10 percent probability. In the event the prior week's case rate is less than 150 cases per million, this variable will double the prior weeks the case rate. If the prior week's case rates is between 150 and 450 cases per million, the prior week's cases will increase by the following formula: $150 + 50\% (\text{previous case rate} - 150)$. If the previous week's case rate is above 450, this variable will add 300 cases to the previous week's case rate. This reflects the proportionally lower impact of a "super spreader" event when cases are at an elevated level. These values were informed by an analysis of weekly changes in case rates by state through December 8, 2020.

Upon broad vaccine availability, we dampen the incidence rate using the factors in the Vaccine Development section.

Appendix I provides a summary of the modeled incidence level by month.

To calculate the number of cases that will result in a hospital admission, we use data from The COVID Tracking Project¹⁵ and Vermont Department of Health¹⁶. From July 1, 2020 through September 30, 2020, the ratio of new hospitalizations to cases for Vermont, New Hampshire, Maine, and Massachusetts was 4.6 percent. The rate of hospital admission for COVID-19 varies materially by age. We use "CDC - Laboratory-Confirmed COVID-19-Associated Hospitalizations"¹⁷ to estimate the relative rate of admission by age band. We then apply the above overall hospitalization rate of 4.6 percent, the relative rate of admission, and 2019 census data¹⁸ to calculate an admission rate by age.

¹⁸ <https://www.census.gov/data.html>, accessed November 4, 2020.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

To develop a treatment cost, we split admissions into those requiring an ICU stay and non-ICU admissions. The COVID Tracking Project¹⁹ measures the number of individuals currently hospitalized and currently in the ICU. From September 1, 2020 through October 31, 2020, the ratio of individuals in the ICU over total hospitalizations was consistently near 20 percent. We use this figure as our estimate of the percentage of hospital admissions that progress to the ICU. To develop the cost of an admission, we use a mix of BCBSVT contract terms, emerging BCBSVT experience and industry sources, including a Wakely²⁰ study. In particular, the cost of an ICU admission is heavily based on the anticipated cost given BCBSVT's contract terms, while the cost of a non-ICU admission observed within BCBSVT experience data aligns very closely with material published elsewhere in the industry. For members where Medicare is the primary payer, we set the treatment cost equal to the actual or estimated Part A deductible.

Vaccine Development

As of December 18, 2020, Pfizer and Moderna have received Emergency Use Authorization of their vaccines, 18 vaccines are in a Phase III trial, 19 vaccines are in a Phase II trial, and numerous other vaccines are in a Phase I trial or the preclinical phase²¹. Our scenario modeling considers varying dates for which the vaccine will be available for the general population, ranging from the first quarter of 2021 to 2022. In each scenario, we assumed a three-month duration from the date of first availability for the administration of the vaccine across the majority of the population, with a third of the population receiving the vaccination in each month. Treatment costs and testing are assumed to ramp down in the following pattern (where "month zero" is the month in which the vaccine first becomes available):

Vaccine Availability Month	Treatment Costs and Testing Dampening Factor
0	83.33%
1	50.00%
2	16.67%
3	0.00%

It is unclear whether any vaccine administration costs would repeat on an annual basis. Our modeling uses a 50 percent likelihood that vaccine administration will be annual.

The federal government has executed purchasing agreements which we assume will cover the cost of a vaccine through 2021, but plan sponsors will be responsible for the costs of administration. We use our contracted rates for the cost of vaccine administration which is set as the reimbursement levels published by CMS²². For Medicare Supplement, we assume Medicare will cover the entire administration costs. In 2022, we assume the cost of a vaccine

¹⁹ <https://covidtracking.com/data/national/hospitalization>, accessed November 4, 2020.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

will be the responsibility of payers and uniformly distributed between \$20 and \$40 for a two-dose regimen.

To develop the estimate of the vaccination rate, we first set the lower and upper bound of a range of plausible values. We use the CDC's reported 2016 age 65+ pneumococcal vaccination rate, 67 percent, as the lower bound²³. Given the severity and extremely contagious nature of COVID-19 and the strenuous impact of the alternative of social distancing, we consider it likely the COVID-19 vaccination rate will meet or more likely surpass the rate of a vaccine that is widely available and recommended for an adult population. At the high end, the rate of newborns with BCBSVT coverage born between 2016 and 2019 receiving any vaccination is approximately 98 percent. We use this figure—representative of the higher rate of vaccination observed when Vermonters are making choices with potentially serious implications for the health of others—as the upper bound and assume a uniform distribution within the range.

Similarly, the timing of the vaccine for the general population is uncertain. Given this, we model varying vaccine availability scenarios, which we provide with their respective weights in the table below. The availability of a vaccine in the model is defined as the month where its available for broad distribution to VISG and insured large group. Medicare Supplement members are assumed to have broad vaccine availability three months preceding availability for the general population.

Vaccine Timing - VISG and Insured Large Group		
	2021	2022
January - March	0%	5%
April - June	35%	5%
July - September	35%	0%
October - December	20%	0%

Diagnostic Testing

To estimate the cost of diagnostic testing, we calculate a weekly average of testing costs incurred by insured individual, small group and large group members, excluding members where Medicare is the primary payer. The assumed testing cost uses a 4-3-2-1 weighted average, wherein the week ending October 30, 2020 is weighted the most heavily and preceding three weeks weighted in descending order.

The future utilization of testing remains uncertain. Prior lack of testing availability, emerging federal guidance, availability of public health testing, and ongoing federal funding for state-run testing all affect the testing rate. In the stochastic model, we assume the level testing is normally distributed with a mean of 0.380 tests per member per year (PMPY) for VISG and insured large group members and 0.306 tests PMPY for Medicare Supplement members, with a standard deviation of one-tenth the respective means. The observed testing rate for August

²³ <https://www.cdc.gov/vaccines/imz-managers/coverage/adultvaxview/pubs-resources/NHIS-2016.html>

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

through October 2020 from VISG and insured large group members is 0.353 tests PMPY, and 0.294 tests PMPY for Medicare Supplement members. We add the respective VISG/insured large group and Medicare Supplement influenza testing rate from January 2019 through December 2020 of 0.027 and 0.012 tests PMPY to set the mean of the assumed distributions²⁴. We do not assume any testing costs for members where Medicare is the primary payer, since Medicare covers diagnostic testing in full.

We also include the cost of an office visit with the cost of testing. We allow the model to select an office visit ratio according to a normal distribution centered at the visit-to-test ratio for August and October 2020. The cost of the office visit is calculated as the average office visit cost, exclusive of emergency room charges, for August through October 2020. Both the visit-to-test ratio and office visit cost are calculated separately for members where Medicare is the primary payer.

Office Visit		
	VISG/Large Group	Medicare Supplement
Cost	\$136.32	\$13.85
Visit-to-Test Ratio	0.368	0.229

Antibody Testing

Current VDH guidance does not recommend the use of antibody testing for use in the general population nor for places of employment. Emerging studies of the efficacy of antibody testing indicate that there may be little to no benefit to conducting this type of testing. We assume that antibody testing will not occur at significant levels in Vermont, and therefore include no future projected antibody testing costs in our modeling.

Analysis & Results

Below, we examine the impact of varying scenarios for the VISG, Insured Large Group, and Medicare Supplement populations. We run 10,000 simulations using the inputs noted in the *Methodology* section. Appendix G provides the summary statistics of the stochastic modeling²⁵.

²⁴ Influenza-like symptoms that would normally lead to a flu test will now, with near certainty, lead to a COVID test as well, as it will not be clear which of the two is causing the symptoms.

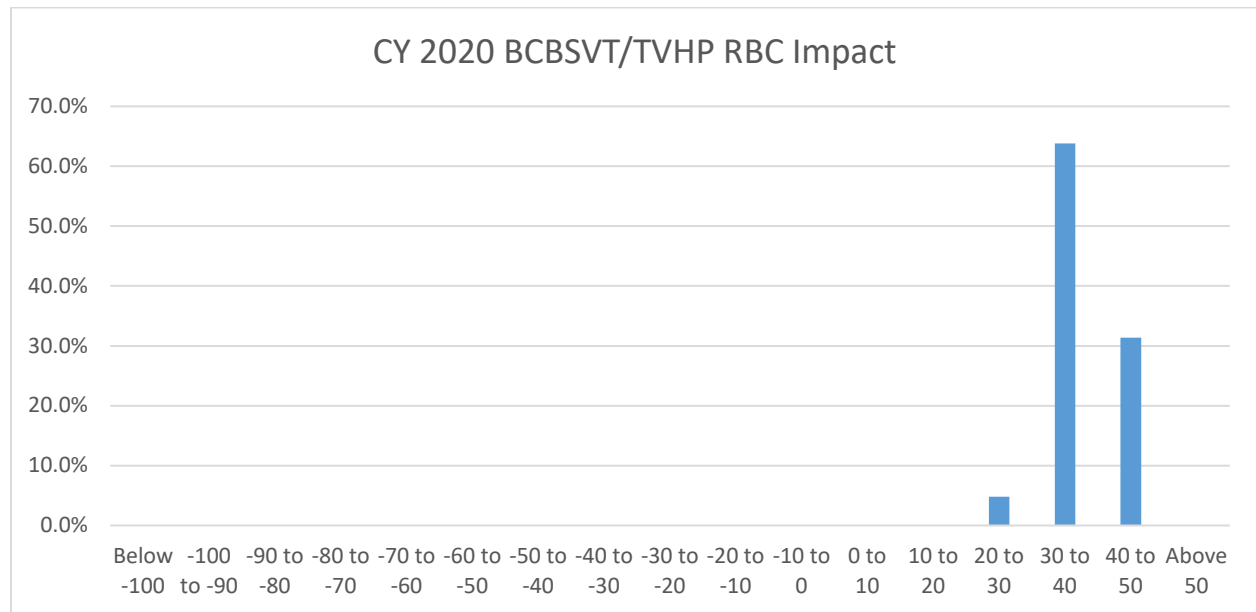

²⁵ The minimum and maximum values are included in Appendix G to assist the evaluation of the reasonability of the full range of modeling results and are not intended to inform the range of likely outcomes.

COVID-19 Modeling**

Summary of Results by Year

We provide the median modeled impact by calendar year for all insured BCBSVT and TVHP membership. Appendices A-C provide line of business specific results for VISG, Insured Large Group, and Medicare Supplement.

All BCBSVT/TVHP	CY 2020	CY 2021	CY 2022	Total
COVID Impact	(\$8,001,921)	\$9,210,283	\$3,909,808	\$5,118,170
Baseline ²⁶	\$352,580,616	\$384,063,698	\$416,682,693	\$1,153,327,007
Change from Baseline	-2.3%	2.4%	0.9%	0.4%
RBC Change	+37	-43	-18	-24

²⁶ Baseline claims reflect the projected medical and pharmacy claims for each respective period in the absence of any COVID-19 impacts. Rates for 2022 have not been submitted for review at this time. The extent to which filed rates incorporate estimated COVID-19 costs will influence the anticipated impact to BCBSVT's reserve position.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

These results demonstrate the disparate claim impacts by year. Notably, CY 2020 results show favorable impacts due to initial slowdown occurring in the spring of 2020, which is not fully offset by the return of deferred care and COVID-related costs. The narrow range of favorable results are attributable to the limited amount of time remaining in 2020 for an increase in cases to materially affect results. 2021 results show unfavorable impacts due to testing costs, treatment costs, vaccination costs, and the return of care that was deferred during 2021. The breadth of 2021 results are due to varying vaccine availability dates and the potential presence of a substantial increase in cases. 2022 results demonstrate an upward impact on expected claims, primarily attributable to vaccine administration, heightened utilization of mental health services, and the worsening of morbidity expected to arise from the lapse in care for chronic conditions. The variance is primarily due to whether a vaccine requires annual administration. The likelihood of vaccine availability in 2021 dampens potential variance in 2022 since treatment and testing costs are negligible in many simulations. Results are materially different for Medicare Supplement members. Results are more favorable for this population since Medicare is covering all diagnostic testing and vaccination costs in full while medical claims comprise a smaller portion of the baseline claims. Appendix C provides a summary of the results for Medicare Supplement.

Collectively, these results demonstrate that, while 2020 operating results were significantly favorable, the claims impact of the full pandemic is likely to be unfavorable through 2022. These results are similar to the modeling performed in July, which produced a majority of simulated results that were fairly neutral over a two-year timeframe. The addition of 2022 to the model introduces further unfavorability due to continued effects of the morbidity impact of deferred care and potential vaccination costs. These results show a narrower range of possible outcomes, which is due to increased knowledge on the capacity of the health care system during periods of increased COVID-19 incidence, continued emerging information on vaccine availability and efficacy, and the continued development of 2020 experience.

**Blue Cross and Blue Shield of Vermont
COVID-19 Modeling**

Conclusions

The COVID-19 pandemic has created unprecedented uncertainty in the level of paid claims through 2022. There is uncertainty beyond 2022 as well, related to levels of infection, vaccine availability, and vaccine efficacy, all of which may present impacts to BCBSVT's members, groups, and reserve position. This analysis exclusively considers direct costs in 2020, 2021, and 2022.

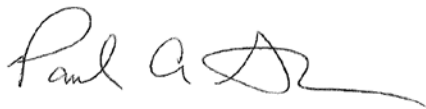

The modeling outlined in the memorandum reflects thousands of scenarios under varying assumptions that produce disparate results. New information regarding the factors outlined in this memorandum continues to emerge and will directly affect BCBSVT's claims and reserve position. Based on the best information known at the time this modeling was performed, the COVID-19 pandemic is likely to have an unfavorable impact on claims costs in both 2021 and 2022.

Actuarial Certification

The purpose of this report is to model possible scenarios related to the COVID-19 pandemic on paid claims and policyholder reserves for BCBSVT. The model and results are intended to quantify the impact varying scenarios have on BCBSVT's projected claims and funded position through 2022. This report is not intended to be used for other purposes.

Appendix J lists applicable limitations and disclosures.

It is my opinion that the modeling presented in this report is reasonable and has been prepared in accordance with applicable Actuarial Standards of Practice. I am a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries, and I meet the Academy's Qualification Standards to render this opinion.

Blue Cross and Blue Shield of Vermont COVID-19 Modeling

Appendix I: Incidence Summary by Month

Blue Cross and Blue Shield of Vermont
COVID-19 Modeling

Appendix J: Disclosures and Limitations

Information Date: The analysis provided in the report is based on information as known on December 29, 2020.

Scope: This result is intended to communicate the effect of possible scenarios related to the COVID-19 pandemic in 2020, 2021, and 2022 on BCBSVT's risk-based capital position. This modeling is not intended to predict the likelihood of any specific scenario or set of scenarios.

Uncertainty or Risk: Future events will affect the results presented in the report. The level of testing, treatment, infection, vaccine availability, vaccine efficacy, infection rates, future federal and state legislation, and additional factors related to the COVID-19 pandemic are unknown. Actual results may vary from the results presented herein, potentially to a significant degree.

Reliance on Other Sources for Data and Other Information: This report relies upon data from the BCBSVT data warehouse. I have reviewed the data for reasonableness, but no audit was performed. We also rely on knowledge provided by BCBSVT medical directors to develop the deferred care anticipated to return and longer-lasting changes to the care delivery system that will result from the pandemic. Lastly, this report relies upon several sources of information, which are cited as footnotes at their respective references. If any of the sources we have relied upon are incorrect or inaccurate, it may affect the accuracy of the results presented in the report.

Subsequent Events: New information related to the COVID-19 pandemic continues to emerge on a regular basis. Subsequent events may affect the results presented herein. The degree to which future events may materially change the results is unknown.

Intended Users: This material has been prepared for consideration by DFR with respect to its assessment of BCBSVT's solvency position as part of the Commissioner's examination order of February 2, 2018. Distribution of this report to any third party must be made in its entirety and must not occur without the prior written consent of BCBSVT. The report should be evaluated only by qualified users. Any parties receiving this report should retain actuarial expertise in interpreting results.

**Subject: Your 3/16/2021 Questions re: Blue Cross and Blue Shield of Vermont
3Q 2021 Large Group Rating Program Filing (SERFF Tracking #: BCVT-132713612) and
re: The Vermont Health Plan 3Q 2021 Large Group Rating Program Filing (SERFF Tracking #: BCVT-
132713919)**

Dear Mr. Kevin Ruggeberg:

In response to your request dated March 16, 2021, here are *your questions* and our answers

1) *Provide more detail regarding the confidential unit cost support provided.*

This question involves confidential and proprietary information and has been provided under separate cover.

2) *As noted in the 2019Q3 filing, the administrative charge for January 2019 renewals was \$40.85 PMPM. The proposed administrative charge for 2022 renewals is \$61.50 PMPM. This represents a 50% increase in administrative cost PMPM in the span of three years. What specific items have contributed to these increases? Please provide more detail that itemizes these increases and explanations or justifications for these increases.*

While preparing our response to this question, we discovered an error in the allocations used to determine the experience for the large group administrative charges. One cost center misstated an allocation applied to the account unit. Correcting it results in a reduction in the per-account charge and a slight increase in the charges for other units (as overhead dollars are now allocated less heavily to the account unit). Please see the attached file *Q3 2021 LG Filing - Revised Exhibit 5A.xlsx* for the revised schedule of administrative expenses.

The table below shows the table from section 2.3 of the actuarial memorandum updated with the new administrative factors. As filed, the admin component increase was 14.3 percent and the total premium change was -0.6 percent.

Impact of Formula and Factor Changes				
Renewal Year	2021	2022	Component Increase	Premium Impact
Filing Year	Q3 2020	Q3 2021		
Manual Claims	\$40,366,749	\$40,620,528	0.6%	0.6%
Projected Rebates	-\$1,702,517	-\$2,786,403	63.7%	-2.4%
Admin	\$3,693,435	\$3,754,444	1.7%	0.1%
Reserve	\$651,909	\$665,001	2.0%	0.0%
Mandates and Assessments	\$919,067	\$941,436	2.4%	0.0%
Additional Items	\$1,255,319	\$1,239,942	-1.2%	0.0%
Total				-1.7%

With the revised administrative factors, the admin PMPM is \$54.71 for the 2022 renewals. This represents a cumulative three-year increase of 33.9 percent over the \$40.85 PMPM from the 2019 renewals in the Q3 2019 large group filing. The breakdown of the increase is below:

Components of LG Admin Increase PMPM	
Increased Enterprise Expenses	15.3%
Decreased Enterprise Membership	12.6%
Change in Large Group Account Size	6.1%
Change in Large Group Allocations	-2.8%
Total Increase PMPM	33.9%

The administrative charges for the BCBSVT enterprise as a whole have increased by 29.9 percent on a PMPM basis in the three years between the experience period used to develop the charges used in the 2019 renewals in the Q3 2019 filing (October 2016 – September 2017) and the experience period used to develop the charges for the 2022 renewals in the Q3 2021 filing (January 2020 – November 2020). Note that these PMPMs exclude items such as federal fees and broker commissions that are priced separately in the large group rating formula as well as items from the experience period that are not expected to recur in the projection period. Actual administrative costs increased by 15.3 percent over the three-year period, while decreases in enterprise membership had a 12.6 percent impact on the PMPM.

According to information provided by our finance department, the 15.3 percent increase in administrative spending is predominantly caused by an increase in technology costs over the last three years. Among the factors driving the increase are incremental costs related to the Plan's new operating system for enrollment, billing and claims processing, which went live in 2019; new customer relationship management software, which allows BCBSVT to deliver on our vision for our digital transformation by engaging our members in new ways, providing personalized tech-enabled journeys to support optimum health, and improving our internal users' experience while streamlining our business processes; enhancements to our information security program to better

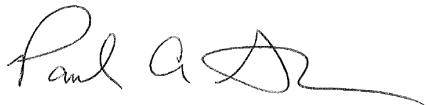

protect our members data; and inflationary increases in vendor costs, which we push our vendors to keep at a minimal level on behalf of our customers.

The large group line of business has lost over 50 percent of its membership between the experience periods used for the Q3 2019 and Q3 2021 filings. The groups used to project 2022 costs in the Q3 2021 filing tend to be smaller than the groups used to project 2019 expenses in the Q3 2019 filing. The average group in the Q3 2019 filing had 224 members per account, while the average group in the Q3 2021 filing had only 167 members per account. A smaller account size will necessarily yield a higher per-member administrative charge. The change in average account size from the 2019 groups to the 2022 groups is responsible for 6.1 percentage points of the 33.9 percent three-year increase.

These increases are partially offset by a reduction in the allocation of administrative expenses to the large group segment. While large group enrollment has decreased by over 50 percent over three years, the groups remaining have better claims experience than those who left. This relative improvement in claims and premium compared to other lines of business is a primary contributor to the allocation reduction, which is responsible for a 2.8 percentage point decrease in large group administrative expenses PMPM.

Please let us know if you have any further questions, or if we can provide additional clarity on any of the items above.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul A. Schultz". The signature is fluid and cursive, with a long horizontal stroke at the end.

Paul A. Schultz, F.S.A., M.A.A.A.
